- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **ospemifene**. [\[Moderate\]](#) Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ospemifene**. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **ospemifene**. [\[Moderate\]](#) Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ospemifene**. [\[Moderate\]](#) Study
- ▶ **Oxaliplatin** → see platinum compounds
- ▶ **Oxazepam** → see benzodiazepines
- ▶ **Oxcarbazepine** → see antiepileptics
- ▶ **Oxybuprocaine** → see anaesthetics, local
- ▶ **Oxybutynin** → see TABLE 10 p. 1431 (antimuscarinics)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Theoretical
- ▶ **Oxybutynin** potentially increases the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **oxybutynin**. [\[Mid\]](#) Theoretical
- ▶ **Oxycodone** → see opioids
- ▶ **Oxymetholone**
- ▶ **Oxymetholone** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Anecdotal
- ▶ **Oxymetholone** increases the anticoagulant effect of **phenindione**. [\[Severe\]](#) Anecdotal
- ▶ **Oxytetracycline** → see tetracyclines
- ▶ **Ozanimod** → see TABLE 6 p. 1430 (bradycardia), TABLE 9 p. 1431 (QT-interval prolongation)

**FOOD AND LIFESTYLE** Tyramine-rich foods might increase the risk of hypertensive crisis when given ozanimod.

- ▶ **Ciclosporin** is predicted to increase the exposure to the active metabolite of **ozanimod**. Avoid. [Moderate] Study
  - ▶ **Clopidogrel** is predicted to increase the exposure to the active metabolite of **ozanimod**. [Severe] Study
  - ▶ **Eltrombopag** is predicted to increase the exposure to the active metabolite of **ozanimod**. Avoid. [Moderate] Study
  - ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to the active metabolite of **ozanimod**. [Severe] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to the active metabolite of **ozanimod**. Avoid. [Moderate] Study
  - ▶ **Ozanimod** potentially increases the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ozanimod**. Avoid and for 3 months after stopping **ozanimod**. [Severe] Theoretical
  - ▶ **Ozanimod** potentially increases the risk of a hypertensive crisis when given with **MAO-B inhibitors** and **MAO-B inhibitors** potentially decrease the exposure to the active metabolite of **ozanimod**. Avoid. [Severe] Theoretical → Also see TABLE 6 p. 1430
  - ▶ **Ozanimod** potentially increases the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
  - ▶ **Ozanimod** potentially increases the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
  - ▶ **Ozanimod** potentially increases the risk of immunosuppression when given with **monoclonal antibodies (alemtuzumab)**. Avoid. [Severe] Theoretical
  - ▶ **Opioids** potentially increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical → Also see TABLE 6 p. 1430
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to the active metabolite of **ozanimod**. Avoid. [Moderate] Study
  - ▶ **SSRIs** potentially increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
  - ▶ **Sympathomimetics, vasoconstrictor** potentially increase the risk of a hypertensive crisis when given with **ozanimod**. [Severe] Theoretical
  - ▶ **Teriflunomide** is predicted to increase the exposure to the active metabolite of **ozanimod**. Avoid. [Moderate] Study
  - ▶ **Tricyclic antidepressants** potentially increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
- Palitaxel** → see taxanes
- Palbociclib** → see TABLE 15 p. 1432 (myelosuppression)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1038. [Severe] Study
  - ▶ **Palbociclib** increases the exposure to **benzodiazepines (midazolam)**. [Moderate] Study
  - ▶ **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. [Moderate] Theoretical
  - ▶ **Cobicistat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1038. [Severe] Study
  - ▶ **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. [Moderate] Theoretical
  - ▶ **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. [Moderate] Theoretical
  - ▶ **Grapefruit** juice is predicted to increase the exposure to **palbociclib**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1038. [Severe] Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1038. [Severe] Study
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1038. [Severe] Study
  - ▶ **Mitotane** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1432

- ▶ **Palbociclib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Adjust dose. [Moderate] Theoretical
  - ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
  - ▶ **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Theoretical
  - ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [Moderate] Theoretical
- Paliperidone** → see antipsychotics, second generation
- Palonosetron** → see 5-HT<sub>3</sub>-receptor antagonists
- Pamidronate** → see bisphosphonates
- Pancreatin**
- ▶ **Pancreatin** is predicted to decrease the effects of **acarbose**. Avoid. [Moderate] Theoretical
- Pancuronium** → see neuromuscular blocking drugs, non-depolarising
- Panitumumab** → see monoclonal antibodies
- Panobinostat** → see TABLE 15 p. 1432 (myelosuppression), TABLE 9 p. 1431 (QT-interval prolongation)

**FOOD AND LIFESTYLE** Avoid pomegranate, pomegranate juice, and star fruit as they are predicted to increase panobinostat exposure.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 979. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers, selective (metoprolol)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Panobinostat** is predicted to increase the exposure to **beta blockers, selective (nebivolol)**. Monitor and adjust dose. [Mild] Theoretical
- ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 979. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 979. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 979. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Macrolides (azithromycin, erythromycin)** are predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 979. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Mitotane** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1432

**Panobinostat** (continued)

- ▶ **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1431

**Pantoprazole** → see proton pump inhibitors**Paracetamol** → see TABLE 1 p. 1429 (hepatotoxicity)

- ▶ **Alcohol** (in those who drink heavily) causes severe liver damage when given with **paracetamol**. [Severe] Study → Also see TABLE 1 p. 1429
- ▶ **Paracetamol** is predicted to decrease the clearance of **alkylating agents (busulfan)**. [Moderate] Theoretical
- ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with topical **anaesthetics, local (prilocaine)**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **paracetamol**. [Moderate] Study → Also see TABLE 1 p. 1429
- ▶ **Paracetamol** increases the anticoagulant effect of **coumarins**. [Moderate] Study
- ▶ **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. [Severe] Theoretical
- ▶ **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. [Severe] Anecdotal
- ▶ **Paracetamol** potentially increases the risk of high anion gap metabolic acidosis when given with **penicillins (flucloxacillin)**. [Severe] Theoretical → Also see TABLE 1 p. 1429
- ▶ **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [Mild] Theoretical
- ▶ **Rifamycins (rifampicin)** decrease the exposure to **paracetamol**. [Moderate] Study

**Paraldehyde** → see antiepileptics**Parathyroid hormone**

- ▶ **Bisphosphonates** are predicted to decrease the effects of parathyroid hormone. Avoid. [Moderate] Study

**Paracetamol** → see NSAIDs**Paricalcitol** → see vitamin D substances**Paritaprevir**

- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **aliskiren**. [Moderate] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **paritaprevir** (with ritonavir and ombitasvir) and **paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Paritaprevir** (in fixed-dose combination with dasabuvir) decreases the anticoagulant effect of **coumarins (acenocoumarol)**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Paritaprevir** (in fixed-dose combination) decreases the anticoagulant effect of **coumarins (warfarin)**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **digoxin**. Monitor and adjust **digoxin** dose, p. 117. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Study
- ▶ **HIV-protease inhibitors (atazanavir)** boosted with ritonavir markedly increase the exposure to **paritaprevir**. Avoid or give unboosted. [Moderate] Study
- ▶ **HIV-protease inhibitors (darunavir)** boosted with ritonavir slightly decrease the exposure to **paritaprevir**. Avoid or give unboosted. [Moderate] Study
- ▶ **HIV-protease inhibitors (fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir moderately to markedly increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (saquinavir)** are predicted to increase the exposure to **paritaprevir** (in fixed-dose combination). Avoid. [Severe] Study
- ▶ **Paritaprevir** is predicted to increase the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **loop diuretics (furosemide)**. Adjust dose. [Moderate] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **loperamide**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **paritaprevir**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **paritaprevir**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **NNRTIs (etravirine)** are predicted to decrease the exposure to **paritaprevir**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Paritaprevir** (in fixed-dose combination) is predicted to increase the risk of rhabdomyolysis when given with **statins (atorvastatin)**. Avoid. [Severe] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **statins (fluvastatin)**. Avoid. [Moderate] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **statins (pravastatin)**. Adjust pravastatin dose. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) slightly to moderately increases the exposure to **statins (rosuvastatin)**. Adjust **rosuvastatin** dose, p. 218. [Moderate] Study
- ▶ **Paritaprevir** (in fixed-dose combination) is predicted to increase the risk of rhabdomyolysis when given with **statins (simvastatin)**. Avoid. [Severe] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Study

- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **thyroid hormones (levothyroxine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **topotecan**. [Moderate] Study

**Paroxetine** → see SSRIs

**Pasireotide** → see TABLE 6 p. 1430 (bradycardia), TABLE 9 p. 1431 (QT-interval prolongation)

- ▶ **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. [Severe] Theoretical

#### Patiromer

**SEPARATION OF ADMINISTRATION** Manufacturer advises take 3 hours before, or after, other drugs.

**Pazopanib** → see TABLE 9 p. 1431 (QT-interval prolongation)

- ▶ Oral **antacids** are predicted to decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1039. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1039. [Moderate] Study
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Grapefruit** juice is predicted to increase the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H<sub>2</sub> receptor antagonists** should be taken 10 hours before or 2 hours after **pazopanib**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1039. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1039. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1039. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Mitotane** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **pazopanib**. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [Moderate] Study

- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Pazopanib** is predicted to affect the exposure to **statins (atorvastatin)**. [Moderate] Anecdotal
- ▶ **Pazopanib** is predicted to affect the exposure to **statins (pravastatin, rosuvastatin, simvastatin)**. [Moderate] Theoretical

**Pegaspargase** → see TABLE 1 p. 1429 (hepatotoxicity), TABLE 15 p. 1432 (myelosuppression)

- ▶ **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. [Severe] Theoretical → Also see TABLE 15 p. 1432
- ▶ **Pegaspargase** affects the efficacy of **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1429 → Also see TABLE 15 p. 1432
- ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vinca alkaloids (vincristine)**. **Vincristine** should be taken 3 to 24 hours before **pegaspargase**. [Severe] Anecdotal → Also see TABLE 1 p. 1429 → Also see TABLE 15 p. 1432
- ▶ **Peginterferon alfa** → see interferons
- ▶ **Pembrolizumab** → see monoclonal antibodies
- ▶ **Pemetrexed** → see TABLE 15 p. 1432 (myelosuppression), TABLE 2 p. 1429 (nephrotoxicity)
- ▶ **Antimalarials (pyrimethamine)** are predicted to increase the risk of adverse effects when given with **pemetrexed**. [Severe] Theoretical
- ▶ **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 2 p. 1429

**Penicillamine** → see TABLE 2 p. 1429 (nephrotoxicity)

- ▶ Oral **antacids** decrease the absorption of oral **penicillamine**. Separate administration by 2 hours. [Mild] Study
- ▶ **Antimalarials (chloroquine)** are predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
- ▶ **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. [Severe] Anecdotal
- ▶ **Gold** potentially increases the risk of adverse effects when given with **penicillamine** (in those who have had previous adverse reactions to gold). Avoid. [Severe] Study
- ▶ **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. [Severe] Theoretical
- ▶ Oral **iron** is predicted to decrease the absorption of oral **penicillamine**. Separate administration by at least 2 hours. [Mild] Study
- ▶ **Zinc** is predicted to decrease the absorption of **penicillamine**. [Mild] Theoretical

**Penicillins** → see TABLE 1 p. 1429 (hepatotoxicity)

amoxicillin · ampicillin · benzathine benzylpenicillin · benzylpenicillin · flucloxacillin · phenoxymethylpenicillin · piperacillin · pivmecillinam · temocillin

- ▶ **Allopurinol** increases the risk of skin rash when given with penicillins (amoxicillin, ampicillin). [Moderate] Study
- ▶ **Antiepileptics (valproate)** increase the risk of adverse effects when given with **pivmecillinam**. Avoid. [Severe] Anecdotal
- ▶ **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Anecdotal
- ▶ **Leflunomide** is predicted to increase the exposure to **benzylpenicillin**. [Moderate] Theoretical
- ▶ **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal → Also see TABLE 1 p. 1429
- ▶ **Piperacillin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. [Moderate] Study
- ▶ **Nitisinone** is predicted to increase the exposure to **benzylpenicillin**. [Moderate] Study
- ▶ **Paracetamol** potentially increases the risk of high anion gap metabolic acidosis when given with **flucloxacillin**. [Severe] Theoretical → Also see TABLE 1 p. 1429

## Penicillins (continued)

- **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Piperacillin** increases the effects of **suxamethonium**. [Moderate] Study
- **Teriflunomide** is predicted to increase the exposure to **benzylpenicillin**. [Moderate] Study
- Pentamidine** → see TABLE 2 p. 1429 (nephrotoxicity), TABLE 9 p. 1431 (QT-interval prolongation)
- **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. [Severe] Anecdotal → Also see TABLE 2 p. 1429
- Pentazocine** → see opioids
- Pentostatin** → see TABLE 15 p. 1432 (myelosuppression), TABLE 5 p. 1430 (thromboembolism)
- **Alkylating agents (cyclophosphamide)** (high-dose) increase the risk of toxicity when given with **pentostatin**. Avoid. [Severe] Anecdotal → Also see TABLE 15 p. 1432 → Also see TABLE 5 p. 1430
- **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. [Severe] Study → Also see TABLE 15 p. 1432

## Pentoxifylline

- **Pentoxifylline** is predicted to increase the concentration of **aminophylline**. Use with caution or avoid. [Severe] Theoretical
- **Quinolones (ciprofloxacin)** very slightly increase the exposure to **pentoxifylline**. [Moderate] Study
- **SSRIs (fluvoxamine)** are predicted to increase the exposure to **pentoxifylline**. [Moderate] Theoretical
- **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [Severe] Study

## Peppermint

- **Peppermint oil** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical

## Perampanel → see antiepileptics

## Pericyazine → see phenothiazines

## Perindopril → see ACE inhibitors

## Pertuzumab → see monoclonal antibodies

## Pethidine → see opioids

## Phenazone → see NSAIDs

## Phenelzine → see MAOIs, irreversible

## Phenindione → see TABLE 3 p. 1429 (anticoagulant effects)

**FOOD AND LIFESTYLE** The effects of phenindione can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control.

- **Antiarrhythmics (propafenone)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Moderate] Theoretical
- **Antifungals, azoles (miconazole)** greatly increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- **Axitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Bosutinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Cabozantinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Cephalosporins (cefazolin, ceftriaxone)** potentially increase the risk of bleeding events when given with **phenindione**. [Severe] Anecdotal
- **Corticosteroids** are predicted to increase the effects of **phenindione**. [Moderate] Anecdotal
- **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Dasatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. [Severe] Theoretical
- **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Study

- **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **phenindione**. [Severe] Anecdotal
- **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. [Severe] Theoretical
- **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Oxymetholone** increases the anticoagulant effect of **phenindione**. [Severe] Anecdotal
- **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. [Severe] Theoretical
- **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Ponatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Regorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Statins (rosuvastatin)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Theoretical
- **Sunitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- **Vandetanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical

## Phenobarbital → see antiepileptics

## Phenothiazines → see TABLE 8 p. 1430 (hypotension), TABLE 9 p. 1431 (QT-interval prolongation), TABLE 11 p. 1431 (CNS depressant effects), TABLE 10 p. 1431 (antimuscarinics)

chlorpromazine • fluphenazine • levomepromazine • pericyazine • prochlorperazine • promazine • trifluoperazine

**FOOD AND LIFESTYLE** **Chlorpromazine** and **fluphenazine** dose adjustment might be necessary if smoking started or stopped during treatment.

- **Phenothiazines** are predicted to decrease the effects of **amfetamines** and **amfetamines** are predicted to decrease the effects of **phenothiazines**. [Moderate] Study
- Oral **antacids** decrease the absorption of oral **phenothiazines**. [Moderate] Anecdotal
- **Chlorpromazine** decreases the concentration of **antiepileptics (phenobarbital, primidone)** and **antiepileptics (phenobarbital, primidone)** decrease the concentration of **chlorpromazine**. [Moderate] Study → Also see TABLE 11 p. 1431
- **Chlorpromazine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. [Severe] Theoretical
- **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1430 → Also see TABLE 9 p. 1431 → Also see TABLE 10 p. 1431
- **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [Severe] Study → Also see TABLE 8 p. 1430
- **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1431
- **MAOIs, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. [Severe] Theoretical → Also see TABLE 8 p. 1430
- **Chlorpromazine** decreases the effects of **metyrapone**. Avoid. [Moderate] Theoretical

- ▶ **Mexiletine** is predicted to increase the exposure to **chlormpromazine**. [Moderate] Theoretical
- ▶ **Moclobemide** increases the risk of adverse effects when given with **levomepromazine**. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **chlormpromazine**. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **chlormpromazine**. [Moderate] Theoretical

**Phenoxyethylpenicillin** → see penicillins

**Phenylephrine** → see sympathomimetics, vasoconstrictor

**Phenytoin** → see antiepileptics

**Pholcodine**

- ▶ **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical

#### Phosphodiesterase type-4 inhibitors

**apremilast** • **roflumilast**

- ▶ **Aminophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** moderately decrease the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **roflumilast**. [Moderate] Study
- ▶ **Mexiletine** is predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **Mitotane** moderately decreases the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **roflumilast**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **apremilast**. Avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **roflumilast**. Avoid. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **roflumilast**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **apremilast**. Avoid. [Severe] Theoretical
- ▶ **Theophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. [Moderate] Theoretical

**Phosphodiesterase type-5 inhibitors** → see TABLE 8 p. 1430 (hypotension), TABLE 9 p. 1431 (QT-interval prolongation)

**avanafil** • **sildenafil** • **tadalafil** • **varденаfil**

- ▶ **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. [Severe] Study → Also see TABLE 8 p. 1430
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antiarrhythmics (dronedaronе)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 859. [Moderate] Theoretical
- ▶ **Antiarrhythmics (dronedaronе)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 860. [Moderate] Study → Also see TABLE 9 p. 1431

- ▶ **Antiarrhythmics (dronedaronе)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaronе)** are predicted to increase the exposure to **varденаfil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 859. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 860. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **varденаfil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 860. [Severe] Study → Also see TABLE 9 p. 1431
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **sildenafil**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study → Also see TABLE 9 p. 1431
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 859. [Moderate] Theoretical → Also see TABLE 8 p. 1430
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 860. [Moderate] Study → Also see TABLE 8 p. 1430
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **tadalafil**. [Severe] Theoretical → Also see TABLE 8 p. 1430
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **varденаfil**. Adjust dose. [Severe] Theoretical → Also see TABLE 8 p. 1430
- ▶ **Cobicistat** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (avanafil, vardenafil)**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 860. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 859. [Moderate] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 860. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Crizotinib** is predicted to increase the exposure to **tadalafil**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **varденаfil**. Adjust dose. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Endothelin receptor antagonists (bosentan)** decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Study

**Phosphodiesterase type-5 inhibitors** (continued)

- ▶ **Grapefruit** juice is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **varденаfil**). Avoid. [\[Severe\]](#) Study → Also see [TABLE 9](#) p. 1431
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 860. [\[Severe\]](#) Study → Also see [TABLE 9](#) p. 1431
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **varденаfil**). Avoid. [\[Severe\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 860. [\[Severe\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
  - ▶ **Imatinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 859. [\[Moderate\]](#) Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 860. [\[Moderate\]](#) Study
  - ▶ **Imatinib** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
  - ▶ **Imatinib** is predicted to increase the exposure to **varденаfil**. Adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 859. [\[Moderate\]](#) Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 860. [\[Moderate\]](#) Study
  - ▶ **Letermovir** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **varденаfil**. Adjust dose. [\[Severe\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 860. [\[Severe\]](#) Study → Also see [TABLE 9](#) p. 1431
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. [\[Severe\]](#) Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 859. [\[Moderate\]](#) Theoretical
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 860. [\[Moderate\]](#) Study → Also see [TABLE 9](#) p. 1431
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **varденаfil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see [TABLE 9](#) p. 1431
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **varденаfil**). Avoid. [\[Severe\]](#) Study → Also see [TABLE 9](#) p. 1431
  - ▶ **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **tadalafil**). Avoid. [\[Severe\]](#) Study
  - ▶ **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**, **varденаfil**). [\[Moderate\]](#) Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 859. [\[Moderate\]](#) Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 860. [\[Moderate\]](#) Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **varденаfil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see [TABLE 9](#) p. 1430
  - ▶ **Nicotinib** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Theoretical → Also see [TABLE 8](#) p. 1430
  - ▶ **Nilotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 859. [\[Moderate\]](#) Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 860. [\[Moderate\]](#) Study → Also see [TABLE 9](#) p. 1431
  - ▶ **Nilotinib** is predicted to increase the exposure to **tadalafil**. [\[Severe\]](#) Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **varденаfil**. Adjust dose. [\[Severe\]](#) Theoretical → Also see [TABLE 9](#) p. 1431
  - ▶ **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Study → Also see [TABLE 8](#) p. 1430
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Theoretical → Also see [TABLE 9](#) p. 1431
  - ▶ **NNRTIs (etravirine)** moderately decrease the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. [\[Moderate\]](#) Study
  - ▶ **Ribociclib** is predicted to increase the exposure to **sildenafil**. Avoid. [\[Moderate\]](#) Theoretical → Also see [TABLE 9](#) p. 1431
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**avanafil**, **tadalafil**). Avoid. [\[Severe\]](#) Study
  - ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors (**sildenafil**, **varденаfil**). [\[Moderate\]](#) Theoretical
  - ▶ **Riociguat** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [\[Severe\]](#) Theoretical → Also see [TABLE 8](#) p. 1430
  - ▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [\[Moderate\]](#) Theoretical → Also see [TABLE 8](#) p. 1430
  - ▶ **St John's wort** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [\[Moderate\]](#) Theoretical
- Pibrentasvir**
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **aliskiren**. [\[Moderate\]](#) Study
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
  - ▶ **Antiarrhythmics (dronedarone)** potentially increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antiepileptics (eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [\[Moderate\]](#) Study
  - ▶ **Calcium channel blockers (verapamil)** are predicted to increase the exposure to **pibrentasvir**. [\[Moderate\]](#) Theoretical
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **colchicine**. [\[Moderate\]](#) Study
  - ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **pibrentasvir**. Avoid. [\[Severe\]](#) Study
  - ▶ **Crizotinib** potentially decreases the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **digoxin**. [\[Moderate\]](#) Study
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **pibrentasvir**. Avoid. [\[Severe\]](#) Study

- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **everolimus**. [Moderate] Study
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [Moderate] Study
  - ▶ **HIV-protease inhibitors (atazanavir, lopinavir)** boosted with ritonavir increase the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** potentially increase the exposure to **pibrentasvir**. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors (saquinavir)** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
  - ▶ **Lapatinib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **loperamide**. [Moderate] Study
  - ▶ **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. [Severe] Theoretical
  - ▶ **Macrolides** are predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
  - ▶ **Mitotane** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ **Ranolazine** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
  - ▶ **Rifamycins (rifampicin)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **sirolimus**. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
  - ▶ **Pibrentasvir** (with glecaprevir) markedly increases the exposure to **statins (atorvastatin)**. Avoid. [Severe] Study
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **statins (fluvastatin)**. [Moderate] Theoretical
  - ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **statins (pravastatin)**. Use with caution and adjust **pravastatin** dose. [Moderate] Study
  - ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **statins (rosuvastatin)**. Use with caution and adjust **rosuvastatin** dose, p. 218. [Moderate] Study
  - ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **statins (simvastatin)**. Avoid. [Moderate] Study
  - ▶ **Pibrentasvir** (with glecaprevir) slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [Mild] Study
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **taxanes (paclitaxel)**. [Moderate] Study
  - ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Moderate] Study
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **topotecan**. [Moderate] Study
  - ▶ **Vemurafenib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- Pilocarpine**
- ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.
- Pimecrolimus**
- ▶ **Alcohol** increases the risk of facial flushing and skin irritation when given with topical **pimecrolimus**. [Moderate] Study
  - ▶ **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- Pimozide** → see TABLE 8 p. 1430 (hypotension), TABLE 9 p. 1431 (QT-interval prolongation), TABLE 11 p. 1431 (CNS depressant effects), TABLE 10 p. 1431 (antimuscarinics)
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1431
  - ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1431
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1431
  - ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical
  - ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1430
  - ▶ **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1431
  - ▶ **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
  - ▶ **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1431
  - ▶ **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1430 → Also see TABLE 9 p. 1431 → Also see TABLE 10 p. 1431
  - ▶ **Grapefruit** juice increases the exposure to **pimozide**. Avoid. [Severe] Theoretical
  - ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1431
  - ▶ **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study
  - ▶ **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
  - ▶ **Larotrectinib** is predicted to increase the exposure to **pimozide**. Use with caution and adjust dose. [Mild] Theoretical
  - ▶ **Letermovir** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
  - ▶ **Pimozide** decreases the effects of **levodopa**. [Severe] Theoretical → Also see TABLE 8 p. 1430
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **pimozide**. Avoid. [Moderate] Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Study → Also see TABLE 9 p. 1431
  - ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1431
  - ▶ **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1431
  - ▶ **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. [Moderate] Theoretical
  - ▶ **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1431
  - ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical
  - ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1431
  - ▶ **Rucaparib** is predicted to increase the exposure to **pimozide**. Monitor and adjust dose. [Moderate] Study
- Pindolol** → see beta blockers, non-selective
- Pioglitazone** → see TABLE 14 p. 1432 (antidiabetic drugs)
- ▶ **Pioglitazone** potentially decreases the exposure to **antifungals, azoles (isavuconazole)**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Clopidogrel** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
  - ▶ **Fibrates (gemfibrozil)** increase the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. [Severe] Study
  - ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **pioglitazone**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
  - ▶ **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **pioglitazone**. Monitor and adjust dose. [Moderate] Study
  - ▶ **St John's wort** slightly decreases the exposure to **pioglitazone**. [Mild] Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- Piperacillin** → see penicillins
- Piperazine** → see antimalarials

**Pirfenidone**

**FOOD AND LIFESTYLE** Smoking increases pirfenidone clearance; patients should be encouraged to stop smoking before and during treatment with pirfenidone.

- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Mexiletine** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical

**Piroxicam** → see NSAIDs

**Pitolisant**

- ▶ **Pitolisant** is predicted to decrease the exposure to **aliskiren**. [Mild] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **antihistamines, non-sedating (fexofenadine)**. [Mild] Theoretical
- ▶ **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. [Severe] Theoretical
- ▶ **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **colchicine**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **coumarins (warfarin)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **digoxin**. [Mild] Theoretical
- ▶ **Duloxetine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **irinotecan**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **loperamide**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **meglitinides (repaglinide)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to increase the exposure to **metformin**. [Mild] Theoretical
- ▶ **Mianserin** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical

- ▶ **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **NNRTIs (efavirenz)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **opioids (morphine)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **paracetamol**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. [Severe] Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (docetaxel)**. Avoid. [Severe] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **taxanes (paclitaxel)**. [Mild] Theoretical
- ▶ **Pitolisumab** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. [Mild] Theoretical
- ▶ **Pitolisant** is predicted to decrease the exposure to **topotecan**. [Mild] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. [Mild] Theoretical
- ▶ **Venlafaxine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Mild] Theoretical

**Pivmecillinam** → see penicillins

**Pixantrone** → see anthracyclines

**Pizotifen** → see antihistamines, sedating

**Platinum compounds** → see TABLE 15 p. 1432 (myelosuppression), TABLE 2 p. 1429 (nephrotoxicity), TABLE 19 p. 1433 (ototoxicity), TABLE 12 p. 1432 (peripheral neuropathy)

carboplatin · cisplatin · oxaliplatin

- ▶ **Cisplatin** increases the risk of pulmonary toxicity when given with **bleomycin**. [Severe] Study → Also see TABLE 15 p. 1432
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

**Polatuzumab vedotin** → see monoclonal antibodies

**Polymyxin b** → see TABLE 2 p. 1429 (nephrotoxicity), TABLE 20 p. 1433 (neuromuscular blocking effects)

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **polymyxin B**, the possibility of interactions should be borne in mind.

**Polystyrene sulfonate**

**SEPARATION OF ADMINISTRATION** Manufacturers advise take other drugs at least 3 hours before or after calcium- or sodium-polystyrene sulfonate; a 6-hour separation should be considered in gastroparesis.

- ▶ Oral **antacids** increase the risk of metabolic alkalosis when given with oral **polystyrene sulfonate**. [Severe] Anecdotal

**Pomalidomide** → see TABLE 15 p. 1432 (myelosuppression), TABLE 5 p. 1430 (thromboembolism)

- ▶ **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. [Severe] Theoretical

- **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. [\[Severe\]](#) Theoretical
- **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1003. [\[Moderate\]](#) Theoretical
- **SSRIs (fluvoxamine)** moderately increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1003. [\[Moderate\]](#) Study

#### Ponatinib

- **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ponatinib**. Avoid. [\[Moderate\]](#) Theoretical
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ponatinib**. Avoid. [\[Moderate\]](#) Theoretical
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1040. [\[Moderate\]](#) Study
- **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1040. [\[Moderate\]](#) Study
- **Ponatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [\[Severe\]](#) Theoretical
- **Grapefruit juice** is predicted to increase the exposure to **ponatinib**. [\[Moderate\]](#) Theoretical
- **HIV-protease inhibitors** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1040. [\[Moderate\]](#) Study
- **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1040. [\[Moderate\]](#) Study
- **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1040. [\[Moderate\]](#) Study
- **Mitotane** is predicted to decrease the exposure to **ponatinib**. Avoid. [\[Moderate\]](#) Theoretical
- **Ponatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [\[Severe\]](#) Theoretical
- **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ponatinib**. Avoid. [\[Moderate\]](#) Theoretical
- **St John's wort** is predicted to decrease the exposure to **ponatinib**. Avoid. [\[Severe\]](#) Theoretical

**Posaconazole** → see antifungals, azoles

**Potassium aminobenzoate** → see TABLE 16 p. 1433 (increased serum potassium)

► **Potassium aminobenzoate** increases the concentration of **methotrexate**. [\[Moderate\]](#) Theoretical

► **Potassium aminobenzoate** is predicted to affect the efficacy of **sulfonamides**. Avoid. [\[Severe\]](#) Theoretical

**Potassium canrenoate** → see TABLE 16 p. 1433 (increased serum potassium)

**Potassium chloride** → see TABLE 16 p. 1433 (increased serum potassium)

#### Potassium citrate

- **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [\[Moderate\]](#) Theoretical
- **Potassium citrate** increases the risk of adverse effects when given with **sucralfate**. Avoid. [\[Moderate\]](#) Theoretical

**Potassium-sparing diuretics** → see TABLE 18 p. 1433 (hyponatraemia), TABLE 16 p. 1433 (increased serum potassium)

amiloride • triamterene

► **Triamterene** potentially increases the clearance of **lithium**. [\[Moderate\]](#) Study

**Pramipexole** → see dopamine receptor agonists

**Prasugrel** → see TABLE 4 p. 1429 (antiplatelet effects)

**Pravastatin** → see statins

#### Praziquantel

- **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [\[Moderate\]](#) Study
- **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [\[Moderate\]](#) Study

- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **praziquantel**. [\[Mild\]](#) Study
- **Antimalarials (chloroquine)** moderately decrease the exposure to **praziquantel**. Use with caution and adjust dose. [\[Moderate\]](#) Study
- **Cobicistat** is predicted to moderately increase the exposure to **praziquantel**. [\[Mild\]](#) Study
- **Corticosteroids (dexamethasone)** decrease the exposure to **praziquantel**. [\[Moderate\]](#) Study
- **Grapefruit juice** is predicted to increase the exposure to **praziquantel**. [\[Moderate\]](#) Study
- **H<sub>2</sub> receptor antagonists (cimetidine)** moderately increase the exposure to **praziquantel**. [\[Moderate\]](#) Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **praziquantel**. [\[Mild\]](#) Study
- **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. [\[Mild\]](#) Study
- **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **praziquantel**. [\[Mild\]](#) Study
- **Mitotane** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [\[Moderate\]](#) Study
- **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **praziquantel**. Avoid. [\[Moderate\]](#) Study

**Prazosin** → see alpha blockers

**Prednisolone** → see corticosteroids

**Pregabalin** → see antiepileptics

**Pridolol** → see TABLE 10 p. 1431 (antimuscarinics)

**Propofol** → see anaesthetics, local

**Primaquine** → see antimalarials

**Primidone** → see antiepileptics

**Procarbazine** → see TABLE 15 p. 1432 (myelosuppression), TABLE 13 p. 1432 (serotonin syndrome)

**FOOD AND LIFESTYLE** Procarbazine is a mild monoamine-oxidase inhibitor and might rarely interact with tyramine-rich foods (such as mature cheese, salami, pickled herring, Bovril®, Oxo®, Marmite® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- **Alcohol** potentially causes a disulfiram-like reaction when given with **procarbazine**. [\[Moderate\]](#) Anecdotal
- **Antiepileptics (carbamazepine, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of hypersensitivity reactions when given with **procarbazine**. [\[Severe\]](#) Anecdotal
- **Antiepileptics (fosphenytoin)** are predicted to increase the risk of hypersensitivity when given with **procarbazine**. [\[Severe\]](#) Anecdotal
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **procarbazine**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- **Prochlorperazine** → see phenothiazines
- **Procyclidine** → see TABLE 10 p. 1431 (antimuscarinics)
- **SSRIs (paroxetine)** slightly increase the exposure to **procyclidine**. Monitor and adjust dose. [\[Moderate\]](#) Study
- **Proguanil** → see antimalarials
- **Promazine** → see phenothiazines
- **Promethazine** → see antihistamines, sedating
- **Propafenone** → see antiarrhythmics
- **Propantheline** → see TABLE 10 p. 1431 (antimuscarinics)
- **Propiverine** → see TABLE 10 p. 1431 (antimuscarinics)
- **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [\[Moderate\]](#) Theoretical
- **Carbimazole** given with a potent CYP3A4 inhibitor is predicted to increase the exposure to **propiverine**. Adjust starting dose. [\[Moderate\]](#) Theoretical
- **Cobicistat** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [\[Moderate\]](#) Theoretical
- **HIV-protease inhibitors** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [\[Moderate\]](#) Theoretical

## Propiverine (continued)

- **Idelalisib** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical
- **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- **Macrolides (clarithromycin)** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. [Moderate] Theoretical

**Propofol** → see TABLE 8 p. 1430 (hypotension), TABLE 11 p. 1431 (CNS depressant effects)

- **Antiepileptics (valproate)** potentially increase the concentration of **propofol**. Adjust dose. [Severe] Theoretical

**Propranolol** → see beta blockers, non-selective

**Propylthiouracil**

- **Propylthiouracil** is predicted to decrease the effects of **metyrapone**. Avoid. [Moderate] Theoretical

**Proton pump inhibitors**

esomeprazole · lansoprazole · omeprazole · pantoprazole · rabeprazole

- **Proton pump inhibitors** are predicted to decrease the exposure to **acalabrutinib**. Avoid. [Moderate] Study
- **Pantoprazole** is predicted to increase the exposure to **alpelisib**. [Moderate] Theoretical
- **Anti-androgens (apalutamide)** markedly decrease the exposure to **omeprazole**. Avoid or monitor. [Moderate] Study
- **Anti-androgens (apalutamide)** are predicted to decrease the exposure to proton pump inhibitors (**lansoprazole**, **rabeprazole**). Avoid or monitor. [Mild] Study
- **Antifungals, azoles (voriconazole)** increase the exposure to proton pump inhibitors (**esomeprazole**, **omeprazole**). Adjust dose. [Moderate] Study
- **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (itraconazole)**. Administer itraconazole capsules with an acidic beverage. [Moderate] Study
- **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (ketoconazole)**. Administer ketoconazole with an acidic beverage. [Moderate] Study
- **Proton pump inhibitors** decrease the absorption of **antifungals, azoles (posaconazole)** (oral suspension). Avoid. [Moderate] Study
- Proton pump inhibitors (**esomeprazole**, **omeprazole**) potentially increase the exposure to **benzodiazepines (clobazam)**. Adjust dose. [Moderate] Theoretical
- **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. [Moderate] Study
- **Esomeprazole** is predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. [Moderate] Theoretical
- **Esomeprazole** is predicted to increase the exposure to **cilostazol**. [Moderate] Theoretical
- **Omeprazole** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 248. [Moderate] Study
- Proton pump inhibitors (**esomeprazole**, **omeprazole**) are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Moderate] Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **dacomitinib**. Avoid. [Moderate] Study
- **Proton pump inhibitors** are predicted to slightly to moderately decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). [Moderate] Theoretical
- **Proton pump inhibitors** are predicted to slightly decrease the exposure to **erlotinib**. Avoid. [Moderate] Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. [Severe] Theoretical
- **HIV-protease inhibitors (tipranavir)** decrease the exposure to proton pump inhibitors. Avoid. [Severe] Study
- **Proton pump inhibitors** decrease the exposure to **HIV-protease inhibitors (atazanavir)**. Avoid or adjust dose. [Severe] Study
- **Proton pump inhibitors** increase the exposure to **HIV-protease inhibitors (saquinavir)**. Avoid. [Severe] Study

- **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 668. [Moderate] Theoretical
- **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. [Severe] Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **NRTIs (rilpivirine)**. Avoid. [Severe] Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. [Moderate] Study
- **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 668, sofosbuvir with velpatasvir p. 669, and sofosbuvir with velpatasvir and voxilaprevir p. 669. [Moderate] Study
- **Esomeprazole** is predicted to slightly to moderately increase the exposure to **SSRIs (citalopram, escitalopram)**. Monitor and adjust dose. [Severe] Theoretical
- **Omeprazole** slightly to moderately increases the exposure to **SSRIs (citalopram, escitalopram)**. Monitor and adjust dose. [Severe] Study
- **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 669. [Moderate] Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 669. [Moderate] Study

**Proxymetacaine** → see anaesthetics, local  
**Pseudoephedrine** → see sympathomimetics, vasoconstrictor

**Pyrazinamide**

- **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with **pyrazinamide**. [Moderate] Theoretical

**Pyridostigmine** → see TABLE 6 p. 1430 (bradycardia)

- **Aminoglycosides** are predicted to decrease the effects of **pyridostigmine**. [Moderate] Theoretical

**Pyrimethamine** → see antimalarials

**Quetiapine** → see antipsychotics, second generation

**Quinagolid** → see dopamine receptor agonists

**Quinapril** → see ACE inhibitors

**Quinine** → see antimalarials

**Quinolones** → see TABLE 9 p. 1431 (QT-interval prolongation)

ciprofloxacin · delafloxacin · levofloxacin · moxifloxacin · ofloxacin

- Avoid concurrent administration of dairy products and mineral-fortified drinks with **oral ciprofloxacin** due to reduced exposure.
- Since systemic absorption can follow topical application of **ciprofloxacin**, **levofloxacin**, and **ofloxacin**, the possibility of interactions should be borne in mind.
- Interactions do not generally apply to topical use of **moxifloxacin** unless specified.

- **Ciprofloxacin** is predicted to increase the exposure to **agomelatine**. [Moderate] Study
- **Ciprofloxacin** is predicted to increase the exposure to **aminophylline**. Adjust dose. [Moderate] Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical
- Oral **antacids** decrease the absorption of oral **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after antacids. [Moderate] Study
- **Ciprofloxacin** slightly increases the exposure to **antiarrhythmics (lidocaine)**. [Mild] Study
- **Ciprofloxacin** affects the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Study
- **Ciprofloxacin** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
- **Ciprofloxacin** is predicted to increase the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Moderate] Anecdotal
- **Calcium salts (calcium carbonate)** decrease the absorption of **ciprofloxacin**. Separate administration by 2 hours. [Moderate] Study

- ▶ **Quinolones** increase the anticoagulant effect of **coumarins**. [Severe] Anecdotal
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **duloxetine**. Avoid. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
  - ▶ **Enteral feeds** decrease the exposure to **ciprofloxacin**. [Moderate] Study
  - ▶ **Ciprofloxacin** slightly increases the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 1027. [Severe] Theoretical
  - ▶ Oral **iron** decreases the exposure to oral **quinolones**. Separate administration by at least 2 hours. [Moderate] Study
  - ▶ **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **lanthanum**. [Moderate] Study
  - ▶ **Leflunomide** is predicted to increase the exposure to **ciprofloxacin**. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
  - ▶ **Ciprofloxacin** slightly increases the exposure to **MAO-B inhibitors (rasagiline)**. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **melatonin**. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** potentially increases the risk of toxicity when given with **methotrexate**. [Severe] Anecdotal
  - ▶ **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. [Severe] Theoretical
  - ▶ **Ciprofloxacin** very slightly increases the exposure to **pentoxifylline**. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1003. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
  - ▶ **Strontium** is predicted to decrease the absorption of **quinolones**. Avoid. [Moderate] Theoretical
  - ▶ **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
  - ▶ **Teriflunomide** is predicted to increase the exposure to **ciprofloxacin**. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** increases the exposure to **tizanidine**. Avoid. [Moderate] Study
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **tolvaptan**. Use with caution and adjust **tolvaptan** dose, p. 708. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 503. [Moderate] Theoretical
  - ▶ **Ciprofloxacin** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
  - ▶ **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [Moderate] Study
- Rabeprazole** → see proton pump inhibitors
- Rabies immunoglobulin** → see immunoglobulins
- Rabies vaccine**
- ▶ **Antimalarials (chloroquine)** decrease the efficacy of **rabies vaccine** (intradermal). Avoid. [Moderate] Study
  - ▶ **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. [Moderate] Theoretical
- Raloxifene** → see TABLE 5 p. 1430 (thromboembolism)

- ▶ **Combined hormonal contraceptives** potentially oppose the effects of **raloxifene**. Avoid. [Severe] Theoretical
  - ▶ **Hormone replacement therapy** potentially opposes the effects of **raloxifene**. Avoid. [Severe] Theoretical
- Raltegravir**
- ▶ Oral **antacids** decrease the exposure to oral **raltegravir**. Avoid. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine)** are predicted to affect the exposure to **raltegravir**. [Moderate] Theoretical
  - ▶ **Antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. [Moderate] Theoretical
  - ▶ **Calcium salts (calcium carbonate)** greatly decrease the exposure to **raltegravir** (high-dose). Avoid. [Severe] Study
  - ▶ **Encorafenib** is predicted to increase the exposure to **raltegravir**. [Moderate] Theoretical
  - ▶ **HIV-protease inhibitors (atazanavir)** increase the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
  - ▶ **HIV-protease inhibitors (darunavir)** increase the risk of rash when given with **raltegravir**. [Moderate] Study
  - ▶ **HIV-protease inhibitors (fosamprenavir)** boosted with **ritonavir** decrease the exposure to **raltegravir** and **raltegravir** decreases the exposure to **HIV-protease inhibitors (fosamprenavir)** boosted with **ritonavir**. Avoid. [Severe] Study
  - ▶ **HIV-protease inhibitors (tipranavir)** boosted with **ritonavir** are predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. [Moderate] Study
  - ▶ **Rifamycins (rifampicin)** slightly decrease the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. [Moderate] Study
  - ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **raltegravir**. Separate administration by at least 2 hours. [Moderate] Theoretical
- Raltitrexed** → see TABLE 15 p. 1432 (myelosuppression)
- ▶ **Folates** are predicted to alter the effects of **raltitrexed**. Avoid. [Moderate] Study
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **raltitrexed**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- Ramipril** → see ACE inhibitors
- Ramucirumab** → see monoclonal antibodies
- Ranibizumab**
- ▶ **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
  - ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. [Severe] Theoretical
  - ▶ **Ranibizumab** increases the risk of bleeding events when given with **heparin**. [Severe] Theoretical
  - ▶ **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. [Severe] Theoretical
  - ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
  - ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **thrombin inhibitors (argatroban)**. [Severe] Theoretical
  - ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **thrombin inhibitors (bivalirudin)**. [Moderate] Theoretical
- Ranitidine** → see H<sub>2</sub> receptor antagonists
- Ranolazine** → see TABLE 9 p. 1431 (QT-interval prolongation)
- ▶ **Ranolazine** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
  - ▶ **Ranolazine** is predicted to increase the exposure to **alsikiren**. [Moderate] Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1431
  - ▶ **Antiarrhythmics (dronedrone)** are predicted to increase the exposure to **ranolazine**. [Severe] Study → Also see TABLE 9 p. 1431
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study

## Ranolazine (continued)

- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to ranolazine. [Severe] Study → Also see TABLE 9 p. 1431
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to ranolazine. Avoid. [Severe] Study → Also see TABLE 9 p. 1431
- ▶ **Ranolazine** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to ranolazine. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **ceritinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Ciclosporin** is predicted to increase the concentration of ranolazine and ranolazine is predicted to increase the concentration of **ciclosporin**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust colchicine dose, p. 1166. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to ranolazine. [Severe] Study → Also see TABLE 9 p. 1431
- ▶ **Ranolazine** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **Grapefruit juice** is predicted to increase the concentration of ranolazine. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to ranolazine. Avoid. [Severe] Study → Also see TABLE 9 p. 1431
- ▶ **Idelalisib** is predicted to increase the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to ranolazine. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to ranolazine. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to ranolazine. Avoid. [Severe] Study → Also see TABLE 9 p. 1431
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to ranolazine. [Severe] Study → Also see TABLE 9 p. 1431
- ▶ **Mitotane** is predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to ranolazine. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to ranolazine. [Severe] Study → Also see TABLE 9 p. 1431
- ▶ **Ranolazine** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Ranolazine** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to ranolazine. Avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Theoretical

- ▶ **Ranolazine** slightly increases the exposure to **statins (simvastatin)**. Adjust simvastatin dose, p. 219. [Moderate] Study
- ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [Severe] Anecdotal
- ▶ **Ranolazine** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust talazoparib dose, p. 1052. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. [Severe] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Ranolazine** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical

**Rasagiline** → see MAO-B inhibitors

## Reboxetine

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of reboxetine. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to reboxetine. Avoid. [Moderate] Study
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors (rasagiline, selegiline)**. Avoid. [Severe] Theoretical
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
- ▶ **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to reboxetine. [Moderate] Anecdotal
- ▶ **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [Moderate] Anecdotal

**Regorafenib** → see TABLE 15 p. 1432 (myelosuppression), TABLE 4 p. 1429 (antiplatelet effects)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to regorafenib. Avoid. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study
- ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Study
- ▶ **Grapefruit juice** is predicted to increase the exposure to regorafenib. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to regorafenib. Avoid. [Moderate] Study

- ▶ **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Regorafenib** is predicted to increase the exposure to **methotrexate**. [Moderate] Theoretical → Also see TABLE 15 p. 1432
- ▶ **Mitotane** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study → Also see TABLE 15 p. 1432
- ▶ **Regorafenib** is predicted to increase the exposure to **NSAIDs (mefenamic acid)**. Avoid. [Moderate] Theoretical → Also see TABLE 4 p. 1429
- ▶ **Regorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Regorafenib** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, rosuvastatin)**. [Moderate] Study
- ▶ **Regorafenib** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 15 p. 1432
- ▶ **Regorafenib** is predicted to increase the exposure to **topotecan**. [Moderate] Study → Also see TABLE 15 p. 1432

### Remdesivir

- ▶ **Anti-androgens (apalutamide, enzalutamide)** potentially decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** potentially decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Antimalarials (chloroquine)** potentially decrease the effects of **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Hydroxychloroquine** potentially decrease the effects of **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** potentially decreases the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** potentially decrease the exposure to **remdesivir**. Avoid. [Moderate] Theoretical

**Remifentanyl** → see opioids

**Repaglinide** → see meglitinides

**Retigabine** → see antiepileptics

**Retinoids** → see TABLE 15 p. 1432 (myelosuppression), TABLE 5 p. 1430 (thromboembolism)

acitretin • adapalene • alitretinoin • bexarotene • isotretinoin • tazarotene • tretinoin

- ▶ Avoid concomitant use of keratolytics in patients taking **acitretin** and **isotretinoin**.
- ▶ Since systemic absorption can follow topical application of **isotretinoin** and **tretinoin**, the possibility of interactions should be borne in mind.

- ▶ **Alcohol** potentially increases the concentration of **acitretin**. Avoid and for 2 months after stopping **acitretin**. [Moderate] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1305. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, itraconazole, ketoconazole, miconazole, voriconazole)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1305. [Moderate] Theoretical
- ▶ **Antifungals, azoles (fluconazole, ketoconazole, voriconazole)** are predicted to increase the risk of **tretinoin** toxicity when given with **tretinoin**. [Moderate] Study
- ▶ **Clopidogrel** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1305. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1305. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1305. [Moderate] Theoretical
- ▶ **Fibrates (gemfibrozil)** increase the concentration of **bexarotene**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1305. [Moderate] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1305. [Moderate] Theoretical

- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1305. [Moderate] Theoretical
- ▶ **Acitretin** is predicted to increase the concentration of **methotrexate**. Avoid. [Moderate] Anecdotal
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [Severe] Anecdotal
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tigecycline**. Avoid. [Severe] Anecdotal
- ▶ **Bexarotene** is predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
- ▶ **Tretinoin** is predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

### Ribavirin

- ▶ **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **NRTIs (zidovudine)**. Avoid. [Severe] Study

**Ribociclib** → see TABLE 15 p. 1432 (myelosuppression), TABLE 9 p. 1431 (QT-interval prolongation)

**FOOD AND LIFESTYLE** Avoid concomitant use of pomegranate or pomegranate juice as it is predicted to increase ribociclib exposure.

- ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to **alpha blockers (alfuzosin)**. Avoid. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study → Also see TABLE 9 p. 1431
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to **antiarrhythmics (amiodarone)**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1042. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to **antipsychotics, second generation (quetiapine)**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** moderately increases the exposure to **benzodiazepines (midazolam)**. Avoid. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1042. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Ribociclib** is predicted to increase the exposure to **digoxin**. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ribociclib**. [Moderate] Study
- ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to **ergotamine**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **ribociclib**. Avoid. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1042. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1042. [Moderate] Study

**Ribociclib** (continued)

- ▶ **Imatinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 15 p. 1432
- ▶ **Letemovir** is predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1042. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Ribociclib** is predicted to increase the exposure to **metformin**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study → Also see TABLE 15 p. 1432
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ribociclib**. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 15 p. 1432 → Also see TABLE 9 p. 1431
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ribociclib**. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Ribociclib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors (sildenafil)**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to **pimozide**. Avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Ribociclib** is predicted to increase the exposure to **statins (pravastatin, rosuvastatin)**. [Moderate] Theoretical
- ▶ **Ribociclib (high-dose)** is predicted to increase the exposure to **statins (simvastatin)**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [Moderate] Theoretical

**Rifabutin** → see rifamycins

**Rifampicin** → see rifamycins

**Rifamycins**

rifabutin • rifampicin

**GENERAL INFORMATION** Although some manufacturers class rifabutin as a potent inducer of CYP3A4, clinical data suggests it is potentially a weak inducer, and therefore the BNF does not extrapolate the interactions of potent CYP3A4 inducers to rifabutin. For those who wish to err on the side of caution, see the interactions of rifampicin but bear in mind other mechanisms might be involved.

- ▶ **Rifampicin** is predicted to decrease the exposure to **5-HT<sub>3</sub>-receptor antagonists (ondansetron)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **aliskiren**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ Oral **antacids** decrease the absorption of oral **rifampicin**. **Rifampicin** should be taken 1 hour before antacids. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **anti-androgens (abiraterone)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antiarrhythmics (disopyramide, dronedarone)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the efficacy of **antiarrhythmics (propafenone)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **anticholinesterases, centrally acting (donepezil)**. [Mild] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to **antiepileptics (phenobarbital, primidone)**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **antiepileptics (brivaracetam)**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifampicin** markedly increases the clearance of **antiepileptics (lamotrigine)**. Adjust **lamotrigine** dose, p. 335. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, posaconazole)** increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of **antifungals, azoles (itraconazole, posaconazole)**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (ketoconazole)** are predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of **antifungals, azoles (ketoconazole)**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** slightly decreases the exposure to **antifungals, azoles (fluconazole)**. Adjust dose. [Moderate] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (itraconazole)**. Avoid and for 14 days after stopping **rifampicin**. [Moderate] Study
- ▶ **Rifampicin** markedly decreases the exposure to **antifungals, azoles (ketoconazole)** and **antifungals, azoles (ketoconazole)** potentially decrease the exposure to **rifampicin**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antifungals, azoles (posaconazole)**. Avoid. [Moderate] Anecdotal
- ▶ **Rifabutin** decreases the concentration of **antifungals, azoles (voriconazole)** and **antifungals, azoles (voriconazole)** increase the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 638. [Severe] Study
- ▶ **Rifampicin** very markedly decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antihistamines, non-sedating (bilastine)**. [Moderate] Theoretical
- ▶ **Rifampicin** increases the clearance of **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antimalarials (artemether with lumefantrine)**. Avoid. [Severe] Study
- ▶ **Rifabutin** slightly decreases the exposure to **antimalarials (atovaquone)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **antimalarials (atovaquone)** and **antimalarials (atovaquone)** slightly increase the exposure to **rifampicin**. Avoid. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **antimalarials (mefloquine)**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **antimalarials (piperazine)**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **antimalarials (quinine)**. [Severe] Study

- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 415. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** decreases the exposure to **antipsychotics, second generation (clozapine)**. [Severe] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (olanzapine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (paliperidone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **ataluren**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bazedoxifene**. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **bedaquiline**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **benzodiazepines (alprazolam)**. Adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **benzodiazepines (chlordiazepoxide)**. [Moderate] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to **benzodiazepines (diazepam)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** increases the clearance of **benzodiazepines (lorazepam, nitrazepam)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **beta blockers, non-selective (carvedilol)**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **beta blockers, non-selective (propranolol)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **beta blockers, selective (bisoprolol, metoprolol)**. [Mild] Study
- ▶ **Rifampicin** moderately decreases the exposure to **beta blockers, selective (celiprolol)**. [Moderate] Study
- ▶ **Rifabutin** slightly decreases the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **bortezomib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **brigatinib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **bupropion**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **buspiprone**. Use with caution and adjust dose. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **cabozantinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** greatly decreases the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **calcium channel blockers (nifedipine)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **caspofungin**. Adjust caspofungin dose, p. 631. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **chloramphenicol**. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **ciclosporin**. [Severe] Study
- ▶ **Rifampicin** is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **clomethiazole**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to rifabutin. Avoid or adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **corticosteroids (budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **corticosteroids (fluticasone)**. [Unknown] Theoretical
- ▶ **Rifampicin** decreases the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dabrafenib**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins** decrease the exposure to **dapsone**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to slightly decrease the exposure to **delamanid**. Avoid. [Moderate] Study
- ▶ **Rifamycins** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **dienogest**. [Severe] Study
- ▶ **Rifampicin** decreases the concentration of **digoxin**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dipeptidylpeptidase-4 inhibitors (linagliptin)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **dipeptidylpeptidase-4 inhibitors (saxagliptin)**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ **Rifabutin** is predicted to decrease the exposure to **elexacaftor**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **elexacaftor**. Avoid. [Severe] Theoretical

## Rifamycins (continued)

- ▶ Rifampicin is predicted to decrease the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **eltrombopag** and **eltrombopag** is predicted to increase the concentration of **rifampicin**. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ Rifampicin transiently increases the exposure to **endothelin receptor antagonists (ambrisentan)**. [Moderate] Study
- ▶ Rifampicin affects the exposure to **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **endothelin receptor antagonists (macitentan)**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1024. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **esketamine**. Adjust dose. [Moderate] Theoretical
- ▶ Rifamycins are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ Rifampicin moderately decreases the exposure to **exemestane**. [Moderate] Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **factor XA inhibitors (apixaban)**. Use with caution or avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Moderate] Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **factor XA inhibitors (rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **fosetoridine**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **fingolimod**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **fostratinib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Study
- ▶ Rifampicin moderately decreases the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **glasdegib**. Avoid. [Severe] Study
- ▶ Rifampicin markedly affects the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 372. [Moderate] Study
- ▶ Rifampicin decreases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **saquinavir**, **tipranavir**) boosted with ritonavir increase the exposure to **rifabutin**. Monitor and adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors (**ritonavir**) markedly increase the exposure to **rifabutin**. Avoid or adjust dose. [Severe] Study
- ▶ Rifampicin is predicted to moderately to markedly decrease the exposure to HIV-protease inhibitors (**atazanavir**, **darunavir**, **fosamprenavir**, **lopinavir**, **saquinavir**). Avoid. [Severe] Study
- ▶ Rifampicin slightly decreases the exposure to HIV-protease inhibitors (**ritonavir**). [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to HIV-protease inhibitors (**tipranavir**). Avoid. [Severe] Study
- ▶ Rifamycins are predicted to decrease the effects of **hormone replacement therapy**. [Moderate] Anecdotal
- ▶ Rifampicin is predicted to decrease the exposure to **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 1027. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **idelalisib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **imatinitib**. Avoid. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **iron chelators (deferasirox)**. Monitor serum ferritin and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **ivabradine**. Adjust dose. [Moderate] Theoretical
- ▶ Rifampicin is predicted to moderately to markedly decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ Rifabutin is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **rifampicin**. [Moderate] Theoretical
- ▶ Rifabutin is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ Rifampicin is predicted to affect the concentration of **letermovir**. [Severe] Theoretical
- ▶ Rifamycins are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Theoretical
- ▶ Rifampicin slightly decreases the exposure to **linezolid**. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Study
- ▶ **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** increase the risk of neutropenia when given with **rifabutin**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the risk of uveitis when given with **rifabutin**. Adjust dose. [Severe] Theoretical
- ▶ Rifampicin decreases the concentration of **macrolides (clarithromycin)**. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **maraviroc**. Adjust dose. [Severe] Study
- ▶ Rifampicin is predicted to slightly decrease the exposure to **meglitinides (nateglinide)**. [Mild] Study
- ▶ Rifampicin is predicted to decrease the exposure to **meglitinides (repaglinide)**. Monitor blood glucose and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ Rifampicin is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **mirtazapine**. Adjust dose. [Moderate] Study
- ▶ Rifampicin is predicted to decrease the exposure to **modafinil**. [Moderate] Theoretical
- ▶ Rifampicin decreases the effects of **monoclonal antibodies (brentuximab vedotin)**. [Severe] Study
- ▶ Rifampicin is predicted to decrease the exposure to **monoclonal antibodies (polatuzumab vedotin)**. [Moderate] Theoretical
- ▶ Rifampicin is predicted to decrease the exposure to **montelukast**. [Mild] Study

- ▶ **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (fosaprepitant)**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (netupitant)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **nitisinone**. Adjust dose. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz)** slightly decrease the exposure to **rifabutin**. Adjust dose. [Severe] Study
- ▶ **Rifabutin** moderately decreases the exposure to **NNRTIs (doravirine)**. Adjust doravirine p. 683 or lamivudine with tenofovir disoproxil and doravirine p. 692 dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid. [Severe] Study
- ▶ **Rifampicin** slightly decreases the exposure to **NNRTIs (efavirenz)**. Adjust dose. [Severe] Study
- ▶ **Rifabutin** decreases the exposure to **NNRTIs (etravirine)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** decreases the concentration of **NNRTIs (nevirapine)**. Avoid. [Severe] Study
- ▶ **Rifabutin** slightly decreases the exposure to **NNRTIs (rilpivirine)**. Adjust dose. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **NNRTIs (rilpivirine)**. Avoid. [Severe] Study
- ▶ **Rifamycins** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
- ▶ **Rifampicin** moderately decreases the exposure to **NSAIDs (celecoxib, diclofenac, etoricoxib)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (alfentanil, fentanyl)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (buprenorphine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **opioids (codeine, morphine)**. [Moderate] Study
- ▶ **Rifampicin** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **opioids (oxycodone)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to the active metabolite of **ozanimod**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** decreases the exposure to **paracetamol**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pazopanib**. Avoid. [Severe] Theoretical
- ▶ **Rifampicin** moderately decreases the exposure to **phosphodiesterase type-4 inhibitors (apremilast)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. Avoid. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (avanafil, tadalafil)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors (sildenafil, vardenafil)**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **pioglitazone**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **pirfenidone**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to moderately decrease the exposure to **pitolisant**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ponatinib**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. [Moderate] Study
- ▶ **Rifampicin** slightly decreases the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **reboxetine**. [Moderate] Anecdotal
- ▶ **Rifampicin** is predicted to decrease the exposure to **regorafenib**. Avoid. [Moderate] Study
- ▶ **Rifampicin** potentially decreases the exposure to **remdesivir**. Avoid. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **ruxitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the concentration of **sirolimus**. Avoid. [Severe] Study
- ▶ **Rifampicin** moderately decreases the exposure to **sodium glucose co-transporter 2 inhibitors (canagliflozin)**. Adjust canagliflozin dose, p. 743. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Rifampicin** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Rifampicin** markedly decreases the exposure to **statins (atorvastatin)**. Manufacturer advises take both drugs at the same time. [Moderate] Study
- ▶ **Rifampicin** moderately decreases the exposure to **statins (fluvastatin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifampicin** very markedly decreases the exposure to **statins (simvastatin)**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sulfonylureas**. [Moderate] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust sunitinib dose, p. 1044. [Moderate] Study
- ▶ **Rifampicin** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Rifampicin** markedly decreases the exposure to **tamoxifen**. [Unknown] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [Severe] Study
- ▶ **Rifampicin** is predicted to decrease the exposure to **taxanes (docetaxel)**. [Severe] Theoretical

## Rifamycins (continued)

- ▶ **Rifampicin** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study
  - ▶ **Rifamycins** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **terbinafine**. Adjust dose. [Moderate] Study
  - ▶ **Terflunomide** is predicted to increase the exposure to rifampicin. [Moderate] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **tetracyclines (doxycycline)**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rifamycins** are predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **tivozanib**. [Severe] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **tizanidine**. [Mild] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **tofacitinib**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **toremifene**. Adjust dose. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **trabectedin**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** decreases the exposure to **trimethoprim**. [Moderate] Study
  - ▶ **Rifamycins** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
  - ▶ **Rifampicin** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
  - ▶ **Rifampicin** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinflunine)**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vinca alkaloids (vinorelbine)**. Use with caution or avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
  - ▶ **Rifampicin** potentially increases the risk of nephrotoxicity when given with **volatile halogenated anaesthetics (methoxyflurane)**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Rifabutin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
  - ▶ **Rifampicin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
  - ▶ **Rifampicin** moderately decreases the exposure to **zolidem**. [Moderate] Study
  - ▶ **Rifampicin** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [Moderate] Study
- Rifaximin**
- ▶ **Ciclosporin** very markedly increases the exposure to rifaximin. [Severe] Study
- Rilpivirine** → see NNRTIs

## Riluzole

**FOOD AND LIFESTYLE** Charcoal-grilled foods are predicted to decrease the exposure to riluzole.

- ▶ **Mexiletine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **riluzole**. [Moderate] Theoretical

**Riociguat** → see TABLE 8 p. 1430 (hypotension)

**FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking is started or stopped during treatment.

- ▶ Oral **antacids** decrease the exposure to oral **riociguat**. **Riociguat** should be taken 1 hour before or 2 hours after antacids. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole, posaconazole)** are predicted to increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure, p. 198. [Moderate] Theoretical
- ▶ **Antifungals, azoles (ketoconazole)** moderately increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure, p. 198. [Moderate] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **riociguat**. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** are predicted to increase the exposure to **riociguat**. Adjust dose and monitor blood pressure. [Moderate] Theoretical
- ▶ **Riociguat** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1430

**Risankizumab** → see monoclonal antibodies

**Risedronate** → see bisphosphonates

**Risperidone** → see antipsychotics, second generation

**Ritonavir** → see HIV-protease inhibitors

**Rituximab** → see monoclonal antibodies

**Rivaroxaban** → see factor XA inhibitors

**Rivastigmine** → see anticholinesterases, centrally acting

**Rizatriptan** → see triptans

**Rocuronium** → see neuromuscular blocking drugs, non-depolarising

**Roflumilast** → see phosphodiesterase type-4 inhibitors

**Ropinirole** → see dopamine receptor agonists

**Ropivacaine** → see anaesthetics, local

**Rosuvastatin** → see statins

**Rotavirus vaccine** → see live vaccines

**Rotigotine** → see dopamine receptor agonists

**Rucaparib** → see TABLE 15 p. 1432 (myelosuppression)

- ▶ **Rucaparib** is predicted to increase the exposure to **aminophylline**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **antiepileptics (phenytoin)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** slightly increases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **ciclosporin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** slightly increases the exposure to **coumarins (warfarin)**. Monitor and adjust dose. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **opioids (alfentanil, fentanyl)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **pimozide**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rucaparib** is predicted to increase the exposure to **tizanidine**. Monitor and adjust dose. [Moderate] Study

**Rufinamide** → see antiepileptics

**Rupatadine** → see antihistamines, non-sedating

**Ruxolitinib** → see TABLE 15 p. 1432 (myelosuppression)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit** juice is predicted to increase the exposure to **ruxolitinib**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1432
- ▶ **Letermovir** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. [Moderate] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 15 p. 1432
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **ruxolitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1432
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ruxolitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Sacubitril** → see TABLE 8 p. 1430 (hypotension)
- ▶ **Sacubitril** is predicted to increase the exposure to **statins**. [Severe] Study
- ▶ **Safinamide** → see MAO-B inhibitors
- ▶ **Salbutamol** → see beta<sub>2</sub> agonists
- ▶ **Salmeterol** → see beta<sub>2</sub> agonists
- ▶ **Sapropterin** → see TABLE 8 p. 1430 (hypotension)
- ▶ **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
- ▶ **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. [Moderate] Theoretical → Also see TABLE 8 p. 1430
- ▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [Moderate] Theoretical
- ▶ **Saquinavir** → see HIV-protease inhibitors
- ▶ **Sarilumab** → see monoclonal antibodies
- ▶ **Saxagliptin** → see dipeptidylpeptidase-4 inhibitors

**Secukinumab** → see monoclonal antibodies

**Selegiline** → see MAO-B inhibitors

## Selenium

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.

- ▶ Oral **selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **selenium**. [Severe] Theoretical

## Selexipag

- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Antiepileptics (valproate)** are predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **selexipag**. [Unknown] Theoretical
- ▶ **Clopidogrel** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 196. [Moderate] Study
- ▶ **Fibrates (gemfibrozil)** increase the exposure to **selexipag**. Avoid. [Severe] Study
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 196. [Moderate] Study
- ▶ **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 196. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to the active metabolite of **selexipag**. Adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 196. [Moderate] Study

**Semaglutide** → see glucagon-like peptide-1 receptor agonists

**Sertraline** → see SSRIs

## Sevelamer

**SEPARATION OF ADMINISTRATION** Drugs for which a reduction in bioavailability could be clinically important should be administered at least 1 hour before, or 3 hours after, sevelamer; alternatively consider monitoring blood concentrations.

**Sevoflurane** → see volatile halogenated anaesthetics

**Sildenafil** → see phosphodiesterase type-5 inhibitors

**Siltuximab** → see monoclonal antibodies

## Silver sulfadiazine

**PHARMACOLOGY** Silver might inactivate enzymatic debriding agents—concurrent use might not be appropriate.

**Simvastatin** → see statins

**Siponimod** → see TABLE 6 p. 1430 (bradycardia), TABLE 9 p. 1431 (QT-interval prolongation)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study → Also see TABLE 6 p. 1430
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **siponimod**. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical

## Siponimod (continued)

- ▶ **Idelalisib** is predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with siponimod. Avoid and for 4 weeks after stopping siponimod. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to siponimod. Avoid depending on other drugs taken—consult product literature. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to siponimod. [Severe] Study
- ▶ Siponimod potentially increases the risk of immunosuppression when given with **monoclonal antibodies (alemtuzumab)**. Avoid. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to siponimod. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to siponimod. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical

## Sirolimus

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of sirolimus. Avoid. [Severe] Study
- ▶ **Antiarhythmics (amiodarone)** are predicted to increase the concentration of sirolimus. [Severe] Anecdotal
- ▶ **Antiarhythmics (dronedarone)** increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of sirolimus. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of sirolimus. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Brigatinib** potentially decreases the concentration of sirolimus. Avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Ceritinib** is predicted to increase the exposure to sirolimus. Avoid. [Severe] Theoretical
- ▶ **Sirolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Ciclosporin** moderately increases the exposure to sirolimus. Separate administration by 4 hours. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the concentration of sirolimus. Avoid. [Severe] Study
- ▶ **Crizotinib** increases the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Eliglustat** is predicted to increase the exposure to sirolimus. Adjust dose. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of sirolimus and sirolimus potentially increases the concentration of **endothelin receptor antagonists (bosentan)**. Avoid. [Severe] Theoretical
- ▶ **Entrectinib** is predicted to increase the exposure to sirolimus. [Mild] Theoretical
- ▶ **Grapefruit** juice increases the concentration of sirolimus. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the concentration of sirolimus. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the concentration of sirolimus. Avoid. [Severe] Study
- ▶ **Imatinib** increases the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Lapatinib** is predicted to increase the exposure to sirolimus. [Moderate] Theoretical
- ▶ **Larotrectinib** is predicted to increase the exposure to sirolimus. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Letermovir** increases the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with sirolimus. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Lorlatinib** is predicted to decrease the exposure to sirolimus. Avoid. [Moderate] Theoretical
- ▶ **Lumacaftor** is predicted to decrease the exposure to sirolimus. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of sirolimus. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. [Severe] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to sirolimus. [Mild] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of sirolimus. Avoid. [Severe] Study
- ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to sirolimus. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to sirolimus. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** increase the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **Nilotinib** increases the concentration of sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **NNRTIs (doravirine)** are predicted to decrease the exposure to sirolimus. Monitor sirolimus concentration and adjust dose, p. 886. [Moderate] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of sirolimus. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Palbociclib** is predicted to increase the exposure to sirolimus. Adjust dose. [Moderate] Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to sirolimus. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to sirolimus. Avoid. [Severe] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to sirolimus. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of sirolimus. Avoid. [Severe] Study
- ▶ **Rucaparib** is predicted to increase the exposure to sirolimus. Monitor and adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the concentration of sirolimus. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to sirolimus. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to sirolimus. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to sirolimus. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to sirolimus. Avoid or adjust dose. [Severe] Study

**Sitagliptin** → see dipeptidylpeptidase-4 inhibitors

## Sodium bicarbonate

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use of **sodium bicarbonate** unless specified.

- ▶ Oral **sodium bicarbonate** is predicted to decrease the exposure to oral **acalabrutinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ Oral **sodium bicarbonate** decreases the absorption of **antifungals, azoles (ketoconazole)**. [Moderate] Study
- ▶ **Sodium bicarbonate** decreases the concentration of **lithium**. [Severe] Anecdotal

- ▶ **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical

#### Sodium citrate

- ▶ **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. [Moderate] Theoretical
- ▶ **Sodium citrate** is predicted to increase the risk of adverse effects when given with **sucralfate**. Avoid. [Moderate] Theoretical

#### Sodium glucose co-transporter 2 inhibitors → see TABLE 14 p. 1432 (antidiabetic drugs), TABLE 8 p. 1430 (hypotension)

canagliflozin • dapagliflozin • empagliflozin • ertugliflozin

- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **canagliflozin**. Adjust **canagliflozin** dose, p. 743. [Moderate] Study
- Sodium oxybate** → see TABLE 8 p. 1430 (hypotension), TABLE 11 p. 1431 (CNS depressant effects)

- ▶ **Antiepileptics (valproate)** increase the exposure to **sodium oxybate**. Adjust **sodium oxybate** dose, p. 512. [Moderate] Study

#### Sodium phenylbutyrate

- ▶ **Antiepileptics (valproate)** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal
- ▶ **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate**. [Moderate] Anecdotal

#### Sodium picosulfate → see TABLE 18 p. 1433 (hyponatraemia)

#### Sodium zirconium cyclosilicate

- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **antifungals, azoles**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **dasatinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **erlotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **HIV-protease inhibitors**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **niotinib**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **NNRTIs (rilpivirine)**. Separate administration by at least 2 hours. [Moderate] Theoretical
- ▶ **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **raltegravir**. Separate administration by at least 2 hours. [Moderate] Theoretical

#### Sofosbuvir

- ▶ **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with **antiarrhythmics (amiodarone)**. Refer to specialist literature. [Severe] Anecdotal
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see **ledipasvir** with **sofosbuvir** p. 668, **sofosbuvir** with **velpatasvir** p. 669, and **sofosbuvir** with **velpatasvir** and **voxilaprevir** p. 669. [Moderate] Study
- ▶ **HIV-protease inhibitors (tipranavir)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Modafinil** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Theoretical
- ▶ **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see **ledipasvir** with **sofosbuvir** p. 668, **sofosbuvir** with **velpatasvir** p. 669, and **sofosbuvir** with **velpatasvir** and **voxilaprevir** p. 669. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study

#### Solifenacin → see TABLE 10 p. 1431 (antimuscarinics)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 824 or **tamsulosin** with **solifenacin** p. 830 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 824 or **tamsulosin** with **solifenacin** p. 830 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 824 or **tamsulosin** with **solifenacin** p. 830 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 824 or **tamsulosin** with **solifenacin** p. 830 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **solifenacin**. Adjust **solifenacin** p. 824 or **tamsulosin** with **solifenacin** p. 830 dose; avoid in hepatic and renal impairment. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **solifenacin**. [Moderate] Theoretical

#### Solriamfetol

- ▶ **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid and for 14 days after stopping **MAO-B inhibitors**. [Severe] Theoretical
- ▶ **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical

#### Somatropin

- ▶ **Corticosteroids** are predicted to decrease the effects of **somatropin**. [Moderate] Theoretical

#### Sorafenib → see TABLE 15 p. 1432 (myelosuppression), TABLE 9 p. 1431 (QT-interval prolongation)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical
- ▶ **Sorafenib** increases the anticoagulant effect of **coumarins**. [Severe] Anecdotal
- ▶ **Mitotane** is predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical → Also see TABLE 15 p. 1432
- ▶ **Neomycin** moderately decreases the exposure to **sorafenib**. [Moderate] Study
- ▶ **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sorafenib**. [Moderate] Theoretical

#### Sotalol → see beta blockers, non-selective

#### Spironolactone → see aldosterone antagonists

#### SSRIs → see TABLE 18 p. 1433 (hyponatraemia), TABLE 13 p. 1432 (serotonin syndrome), TABLE 9 p. 1431 (QT-interval prolongation), TABLE 4 p. 1429 (antipletelet effects)

citalopram • dapoxetine • escitalopram • fluoxetine • fluvoxamine • paroxetine • sertraline

- ▶ **Fluvoxamine** very markedly increases the exposure to **agomelatine**. Avoid. [Severe] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **amfetamines**. [Severe] Theoretical → Also see TABLE 13 p. 1432
- ▶ **Fluvoxamine** moderately to markedly increases the exposure to **aminophylline**. Avoid. [Severe] Study
- ▶ **Fluvoxamine** decreases the clearance of **anaesthetics, local (ropivacaine)**. Avoid prolonged use. [Moderate] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **anagrelide**. [Moderate] Theoretical → Also see TABLE 4 p. 1429

## SSRIs (continued)

- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **citalopram**. Avoid or monitor. [Mild] Study → Also see TABLE 9 p. 1431
- ▶ **Antiarhythmics (dronedarone)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 867. [Moderate] Theoretical
- ▶ **Antiarhythmics (dronedarone)** are predicted to increase the exposure to SSRIs (**citalopram**, **escitalopram**, **fluoxetine**, **fluvoxamine**, **paroxetine**, **sertraline**). [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Fluvoxamine** is predicted to increase the exposure to **antiarrhythmics (propafenone)**. Monitor and adjust dose. [Moderate] Study
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the concentration of **paroxetine**. [Moderate] Study
- ▶ **Sertraline** potentially increases the risk of toxicity when given with **antiepileptics (fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ SSRIs (**fluoxetine**, **fluvoxamine**) are predicted to increase the concentration of **antiepileptics (fosphenytoin, phenytoin)**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 867. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 867. [Severe] Study
- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the exposure to **citalopram**. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antihistamines, sedating (cyproheptadine)** potentially decrease the effects of SSRIs. [Moderate] Anecdotal
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to moderately increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust **aripiprazole** dose, p. 415. [Moderate] Study
- ▶ **Fluvoxamine** increases the exposure to **antipsychotics, second generation (asenapine)**. [Moderate] Study
- ▶ **Paroxetine** moderately increases the exposure to **antipsychotics, second generation (asenapine)**. [Moderate] Study
- ▶ **Fluvoxamine** increases the concentration of **antipsychotics, second generation (clozapine)**. Monitor adverse effects and adjust dose. [Severe] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **antipsychotics, second generation (olanzapine)**. Adjust dose. [Severe] Anecdotal
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study
- ▶ **Fluvoxamine** moderately increases the exposure to **benzodiazepines (alprazolam)**. Adjust dose. [Moderate] Study
- ▶ SSRIs (**fluoxetine**, **fluvoxamine**) potentially increase the exposure to **benzodiazepines (clonazepam)**. Adjust dose. [Moderate] Theoretical
- ▶ **Fluvoxamine** moderately increases the exposure to **benzodiazepines (diazepam)**. [Moderate] Study
- ▶ **Fluvoxamine** moderately increases the concentration of **beta blockers, non-selective (propranolol)**. [Moderate] Study
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **dapoxetine**. [Moderate] Theoretical → Also see TABLE 13 p. 1432
- ▶ **Fluvoxamine** markedly decreases the clearance of **caffeine citrate**. Monitor and adjust dose. [Severe] Study

- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 867. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine**, **fluvoxamine**) are predicted to increase the exposure to **cannabidiol**. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine**, **fluvoxamine**) are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 248. [Moderate] Theoretical → Also see TABLE 4 p. 1429
- ▶ **Cinacalcet** is predicted to increase the exposure to **dapoxetine**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **cinacalcet**. Adjust dose. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine**, **fluvoxamine**) are predicted to decrease the efficacy of **clopidogrel**. Avoid. [Severe] Theoretical → Also see TABLE 4 p. 1429
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 867. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 867. [Moderate] Theoretical
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **dopamine receptor agonists (ropinirole)**. Adjust dose. [Moderate] Study
- ▶ **Fluvoxamine** markedly increases the exposure to **duloxetine**. Avoid. [Severe] Study → Also see TABLE 18 p. 1433 → Also see TABLE 13 p. 1432 → Also see TABLE 4 p. 1429
- ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Fluvoxamine** is predicted to increase the exposure to **eltrombopag**. [Moderate] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. [Moderate] Theoretical
- ▶ **Gilteritinib** is predicted to decrease the efficacy of SSRIs (**escitalopram**, **fluoxetine**, **sertraline**). Avoid. [Moderate] Theoretical
- ▶ **Grapefruit** juice moderately increases the exposure to **sertraline**. Avoid. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**citalopram**, **escitalopram**). Adjust dose. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to SSRIs (**paroxetine**, **sertraline**). [Moderate] Study
- ▶ **Fluoxetine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Anecdotal
- ▶ **Fluvoxamine** increases the concentration of **haloperidol**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 867. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 867. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 867. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 867. [Moderate] Theoretical
- ▶ **Fluoxetine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Unknown] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Mild] Theoretical
- ▶ **Fluvoxamine** is predicted to increase the exposure to **loxapine**. Avoid. [Unknown] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 867. [Severe] Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 867. [Moderate] Theoretical

- ▶ **Fluvoxamine** very markedly increases the exposure to **melatonin**. Avoid. [Severe] Study
  - ▶ SSRIs (**fluoxetine**, **fluvoxamine**, **paroxetine**) are predicted to increase the exposure to **mexiletine**. [Moderate] Study
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 867. [Moderate] Theoretical
  - ▶ SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with **neuromuscular blocking drugs, non-depolarising (mivacurium)**. [Unknown] Theoretical
  - ▶ **Nilotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 867. [Moderate] Theoretical
  - ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
  - ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study → Also see TABLE 13 p. 1432
  - ▶ SSRIs potentially increase the risk of adverse effects when given with **ozanimod**. [Severe] Theoretical
  - ▶ **Fluvoxamine** is predicted to increase the exposure to **pentoxifylline**. [Moderate] Theoretical
  - ▶ **Fluvoxamine** is predicted to increase the exposure to **phenothiazines (chlorpromazine)**. [Moderate] Theoretical
  - ▶ **Fluvoxamine** is predicted to increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. [Moderate] Study
  - ▶ **Fluvoxamine** is predicted to moderately increase the exposure to **pirfenidone**. Avoid. [Moderate] Study
  - ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
  - ▶ **Fluvoxamine** moderately increases the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1003. [Moderate] Study
  - ▶ **Paroxetine** slightly increases the exposure to **procyclidine**. Monitor and adjust dose. [Moderate] Study
  - ▶ **Proton pump inhibitors (esomeprazole)** are predicted to slightly to moderately increase the exposure to SSRIs (**citalopram**, **escitalopram**). Monitor and adjust dose. [Severe] Theoretical
  - ▶ **Proton pump inhibitors (omeprazole)** slightly to moderately increase the exposure to SSRIs (**citalopram**, **escitalopram**). Monitor and adjust dose. [Severe] Study
  - ▶ **Fluvoxamine** is predicted to increase the exposure to **riluzole**. [Moderate] Theoretical
  - ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to SSRIs (**dapoxetine**). [Moderate] Theoretical → Also see TABLE 18 p. 1433 → Also see TABLE 13 p. 1432 → Also see TABLE 4 p. 1429
  - ▶ SSRIs potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Unknown] Theoretical
  - ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
  - ▶ **Terbinafine** is predicted to increase the exposure to **fluoxetine**. Adjust dose. [Moderate] Theoretical
  - ▶ **Terbinafine** moderately increases the exposure to **paroxetine**. [Moderate] Study
  - ▶ **Terbinafine** is predicted to increase the exposure to SSRIs (**citalopram**, **dapoxetine**, **escitalopram**, **fluvoxamine**, **sertraline**). [Moderate] Theoretical
  - ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
  - ▶ **Fluvoxamine** moderately to markedly increases the exposure to **theophylline**. Avoid. [Severe] Study
  - ▶ **Fluvoxamine** very markedly increases the exposure to **tizanidine**. Avoid. [Severe] Study
  - ▶ SSRIs (**fluoxetine**, **fluvoxamine**) given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to **tofacinib**. Adjust **tofacinib** dose, p. 1154. [Moderate] Study
  - ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study → Also see TABLE 18 p. 1433 → Also see TABLE 13 p. 1432
  - ▶ **Fluvoxamine** increases the exposure to **tricyclic antidepressants (amitriptyline, imipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1433 → Also see TABLE 13 p. 1432
  - ▶ **Fluvoxamine** markedly increases the exposure to **tricyclic antidepressants (clomipramine)**. Adjust dose. [Severe] Study → Also see TABLE 18 p. 1433 → Also see TABLE 13 p. 1432
  - ▶ **Fluvoxamine** increases the concentration of **triptans (frovatriptan)**. [Severe] Study → Also see TABLE 13 p. 1432
  - ▶ **Fluvoxamine** is predicted to increase the exposure to **triptans (zolmitriptan)**. Adjust **zolmitriptan** dose, p. 503. [Severe] Theoretical → Also see TABLE 13 p. 1432
  - ▶ SSRIs (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1432 → Also see TABLE 4 p. 1429
- St John's wort** → see TABLE 13 p. 1432 (serotonin syndrome)
- ▶ **St John's wort** is predicted to decrease the exposure to **abemaciclib**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **acalabrutinib**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **afatinib**. [Moderate] Study
  - ▶ **St John's wort** is predicted to slightly decrease the exposure to **aldosterone antagonists (eplerenone)**. Avoid. [Moderate] Study
  - ▶ **St John's wort** decreases the exposure to **aliskiren**. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the concentration of **aminophylline**. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **anti-androgens (darolutamide)**. Avoid. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **antiarrhythmics (dronedronone)**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **antiepileptics (brivaracetam)**. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the concentration of **antiepileptics (carbamazepine)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the concentration of **antiepileptics (fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **antiepileptics (perampanel)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **antiepileptics (tiagabine)**. Avoid. [Mild] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **antifungals, azoles (isavuconazole)**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** moderately decreases the exposure to **antifungals, azoles (voriconazole)**. Avoid. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the concentration of **antimalarials (piperaquine)**. Avoid. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (cariprazine)**. Avoid. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (lurasidone)**. Monitor and adjust dose. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (paliperidone)**. [Severe] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **antipsychotics, second generation (quetiapine)**. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **avapritinib**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **axitinib**. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. [Severe] Study
  - ▶ **St John's wort** moderately decreases the exposure to **benzodiazepines (alprazolam)**. [Moderate] Study
  - ▶ **St John's wort** moderately decreases the exposure to **benzodiazepines (midazolam)**. Monitor and adjust dose. [Moderate] Study

## St John's wort (continued)

- ▶ St John's wort is predicted to decrease the exposure to **bictegravir**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **bosutinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **brigatinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **cabozantinib**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **calcium channel blockers (diltiazem, verapamil)**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **cannabidiol**. Adjust dose. [Mild] Study
- ▶ St John's wort is predicted to decrease the exposure to **ceritinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort decreases the concentration of **ciclosporin**. Avoid. [Moderate] Study
- ▶ St John's wort is predicted to alter the effects of **cilostazol**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **cobicistat**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **cobimetinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort decreases the efficacy of **combined hormonal contraceptives**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
- ▶ St John's wort decreases the anticoagulant effect of **coumarins**. Avoid. [Severe] Anecdotal
- ▶ St John's wort is predicted to decrease the exposure to **crizotinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **darifenacin**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **dasabuvir**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **dasatinib**. [Severe] Study
- ▶ St John's wort is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Theoretical
- ▶ St John's wort decreases the concentration of **digoxin**. Avoid. [Severe] Anecdotal
- ▶ St John's wort decreases the exposure to **dolutegravir**. Adjust dose. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. [Mild] Study
- ▶ St John's wort is predicted to moderately decrease the exposure to **elbasvir**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **elexacaftor**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to increase the exposure to **eliglustat**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the concentration of **elvitegravir**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **encorafenib**. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **endothelin receptor antagonists (bosentan)**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **endothelin receptor antagonists (macitentan)**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **entrectinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the effects of **ergotamine**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **erlotinib**. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **exemestane**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **factor XA inhibitors (apixaban)**. Use with caution or avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **factor XA inhibitors (edoxaban)**. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **fesoterodine**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to  **fingolimod**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **gefitinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **gilteritinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1049. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **glecaprevir**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the concentration of **guanfacine**. Adjust dose. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the efficacy of **hormone replacement therapy**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **ibrutinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **idelalisib**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **imatinib**. [Moderate] Study
- ▶ St John's wort slightly decreases the exposure to **irinotecan**. Avoid. [Severe] Study
- ▶ St John's wort decreases the exposure to **ivabradine**. Avoid. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **ivacaftor**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **ixazomib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **lapatinib**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **larotrectinib**. Avoid. [Moderate] Study
- ▶ St John's wort is predicted to decrease the exposure to **ledipasvir**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the concentration of **letermovir**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **lorlatinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **maraviroc**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **midostaurin**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **naldemedine**. Avoid. [Severe] Study
- ▶ St John's wort is predicted to decrease the exposure to **naloxegol**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **neratinib**. Avoid. [Severe] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)**. Avoid. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **neurokinin-1 receptor antagonists (netupitant)**. [Moderate] Theoretical
- ▶ St John's wort is predicted to decrease the exposure to **nilotinib**. Avoid. [Severe] Theoretical

- ▶ **St John's wort** is predicted to decrease the exposure to **nintedanib**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **NNRTIs (doramirine, rilpivirine)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **NNRTIs (efavirenz, nevirapine)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **NNRTIs (etravirine)**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
- ▶ **St John's wort** is predicted to decrease the exposure to **olaparib**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **ombitasvir**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** decreases the exposure to **opioids (methadone)**. Monitor and adjust dose. [Severe] Study → Also see TABLE 13 p. 1432
- ▶ **St John's wort** moderately decreases the exposure to **opioids (oxycodone)**. Adjust dose. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **osimertinib**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **ospemifene**. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **palbociclib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **panobinostat**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **paritaprevir** (with ritonavir and ombitasvir). Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **phosphodiesterase type-4 inhibitors (apremilast)**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **pibrentasvir**. Avoid. [Severe] Study
- ▶ **St John's wort** slightly decreases the exposure to **pioglitazone**. [Mild] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **ponatinib**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **ranolazine**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ribociclib**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **ruxitinib**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. [Severe] Study
- ▶ **St John's wort** slightly decreases the exposure to **statins (atorvastatin)**. [Mild] Study
- ▶ **St John's wort** moderately decreases the exposure to **statins (simvastatin)**. [Moderate] Study
- ▶ **St John's wort** decreases the concentration of **tacrolimus**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **taxanes (cabazitaxel)**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **tezacaftor**. Avoid. [Severe] Theoretical
- ▶ **St John's wort** potentially decreases the exposure to **theophylline**. [Severe] Anecdotal
- ▶ **St John's wort** is predicted to decrease the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study

- ▶ **St John's wort** is predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **tivozanib**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **tofacitinib**. [Moderate] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **topotecan**. [Severe] Theoretical
  - ▶ **St John's wort** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
  - ▶ **St John's wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
  - ▶ **St John's wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- Statins** → see TABLE 1 p. 1429 (hepatotoxicity)

atorvastatin · fluvastatin · pravastatin · rosuvastatin · simvastatin

- ▶ **Atorvastatin** slightly to moderately increases the exposure to **aliskiren**. [Moderate] Study
- ▶ Oral **antacids** decrease the absorption of oral **rosuvastatin**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Anti-androgens (apalutamide)** slightly decrease the exposure to **rosuvastatin**. [Mild] Study
- ▶ **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **simvastatin**. Avoid or monitor. [Moderate] Study
- ▶ **Anti-androgens (enzalutamide)** are predicted to decrease the exposure to **simvastatin**. [Severe] Study
- ▶ **Anti-androgens (darolutamide)** are predicted to increase the exposure to statins (**atorvastatin, fluvastatin, rosuvastatin**). Avoid. [Severe] Theoretical
- ▶ **Anti-androgens (darolutamide)** are predicted to increase the concentration of statins (**pravastatin, simvastatin**). [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **fluvastatin**. [Severe] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 219. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **rosuvastatin**. Adjust dose. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** moderately increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study → Also see TABLE 1 p. 1429
- ▶ **Antiepileptics (carbamazepine, eslicarbazepine)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. [Moderate] Theoretical → Also see TABLE 1 p. 1429
- ▶ **Antiepileptics (eslicarbazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** potentially decrease the exposure to statins (**atorvastatin, simvastatin**). [Moderate] Anecdotal
- ▶ **Antifungals, azoles (fluconazole)** potentially increase the risk of rhabdomyolysis when given with **atorvastatin**. Monitor and adjust dose. [Severe] Anecdotal → Also see TABLE 1 p. 1429
- ▶ **Antifungals, azoles (fluconazole)** are predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Anecdotal → Also see TABLE 1 p. 1429
- ▶ **Antifungals, azoles (fluconazole, miconazole)** are predicted to increase the exposure to **fluvastatin**. [Severe] Theoretical → Also see TABLE 1 p. 1429

## Statins (continued)

- ▶ Antifungals, azoles (**isavuconazole**) slightly increase the exposure to **atorvastatin**. [Moderate] Study
- ▶ Antifungals, azoles (**isavuconazole**) are predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study → Also see TABLE 1 p. 1429
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study → Also see TABLE 1 p. 1429
- ▶ Antifungals, azoles (**miconazole**) potentially increase the exposure to **atorvastatin**. [Severe] Anecdotal
- ▶ Antifungals, azoles (**miconazole**) are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Theoretical
- ▶ Antifungals, azoles (**posaconazole**) are predicted to increase the exposure to **atorvastatin**. Avoid. [Severe] Anecdotal
- ▶ Antifungals, azoles (**posaconazole**) markedly to very markedly increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**isavuconazole**) are predicted to increase the exposure to statins (**fluvastatin**, **rosuvastatin**). [Moderate] Theoretical
- ▶ **Bempedoic acid** increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 219. [Moderate] Study
- ▶ Calcium channel blockers (**amlodipine**) slightly increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 219. [Mild] Study
- ▶ Calcium channel blockers (**diltiazem**) slightly to moderately increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) moderately increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ Calcium channel blockers (**verapamil**) are predicted to slightly to moderately increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ Cephalosporins (**ceftobiprole**) are predicted to increase the concentration of statins. [Moderate] Theoretical
- ▶ **Ciclosporin** very markedly increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 217. [Severe] Study
- ▶ **Ciclosporin** moderately increases the exposure to **fluvastatin**. [Severe] Study
- ▶ **Ciclosporin** markedly to very markedly increases the exposure to **pravastatin**. Adjust dose. [Severe] Study
- ▶ **Ciclosporin** markedly increases the exposure to statins (**rosuvastatin**, **simvastatin**). Avoid. [Severe] Study
- ▶ **Clopidogrel** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 218. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Colchicine** increases the risk of rhabdomyolysis when given with statins. [Severe] Anecdotal
- ▶ Statins (**fluvastatin**, **rosuvastatin**) increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to statins (**atorvastatin**, **simvastatin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ **Danazol** is predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. [Severe] Theoretical
- ▶ **Danazol** increases the risk of rhabdomyolysis when given with **simvastatin**. Avoid. [Severe] Anecdotal
- ▶ Statins are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. [Severe] Theoretical
- ▶ **Dasabuvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 218. [Moderate] Study
- ▶ **Dasatinib** is predicted to increase the exposure to **simvastatin**. [Moderate] Theoretical
- ▶ **Elbasvir** increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 217. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 217. [Unknown] Theoretical
- ▶ **Elbasvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 218. [Moderate] Study
- ▶ **Elbasvir** is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 219. [Unknown] Theoretical
- ▶ **Eltrombopag** is predicted to increase the exposure to statins. Monitor and adjust dose. [Moderate] Study
- ▶ Endothelin receptor antagonists (**bosentan**) slightly decrease the exposure to **atorvastatin**. [Mild] Study
- ▶ Endothelin receptor antagonists (**bosentan**) moderately decrease the exposure to **simvastatin**. [Moderate] Study
- ▶ **Ezetimibe** potentially increases the risk of rhabdomyolysis when given with statins. [Severe] Anecdotal
- ▶ Fibrates (**bezafibrate**, **ciprofibrate**) increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Study
- ▶ Fibrates (**bezafibrate**, **ciprofibrate**) increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **rosuvastatin** dose, p. 218. [Severe] Study
- ▶ Fibrates (**bezafibrate**, **ciprofibrate**) increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 219. [Severe] Study
- ▶ Fibrates (**ciprofibrate**) increase the risk of rhabdomyolysis when given with **atorvastatin**. Avoid or adjust dose. [Severe] Study
- ▶ Fibrates (**ciprofibrate**) increase the risk of rhabdomyolysis when given with **fluvastatin**. [Severe] Study
- ▶ Fibrates (**fenofibrate**) are predicted to increase the risk of rhabdomyolysis when given with **fluvastatin**. Adjust **fenofibrate** dose, p. 214. [Severe] Theoretical
- ▶ Fibrates (**fenofibrate**) are predicted to increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. [Severe] Theoretical
- ▶ Fibrates (**fenofibrate**) increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 214, p. 218. [Severe] Anecdotal
- ▶ Fibrates (**gemfibrozil**) increase the risk of rhabdomyolysis when given with statins. Avoid. [Severe] Anecdotal
- ▶ Fibrates (**bezafibrate**) increase the risk of rhabdomyolysis when given with statins (**atorvastatin**, **fluvastatin**). [Severe] Study
- ▶ Fibrates (**fenofibrate**) increase the risk of rhabdomyolysis when given with statins (**atorvastatin**, **simvastatin**). Adjust **fenofibrate** dose, p. 214. [Severe] Anecdotal
- ▶ **Filgotinib** is predicted to increase the exposure to statins (**atorvastatin**, **pravastatin**, **rosuvastatin**, **simvastatin**). Avoid. [Moderate] Theoretical
- ▶ **Fostamatinib** slightly increases the exposure to **rosuvastatin**. [Moderate] Study
- ▶ **Fostamatinib** slightly increases the exposure to **simvastatin**. Monitor adverse effects and adjust dose. [Moderate] Study
- ▶ **Fusidate** increases the risk of rhabdomyolysis when given with statins. Avoid. [Severe] Anecdotal
- ▶ **Glecaprevir** (with **pibrentasvir**) markedly increases the exposure to **atorvastatin**. Avoid. [Severe] Study
- ▶ **Glecaprevir** (with **pibrentasvir**) is predicted to increase the exposure to **fluvastatin**. [Moderate] Theoretical
- ▶ **Glecaprevir** (with **pibrentasvir**) increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 218. [Moderate] Study
- ▶ **Glecaprevir** (with **pibrentasvir**) increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 218. [Moderate] Study
- ▶ **Glecaprevir** (with **pibrentasvir**) increases the exposure to **simvastatin**. Avoid. [Moderate] Study
- ▶ **Grapefruit** juice increases the exposure to **atorvastatin**. [Mild] Study
- ▶ **Grapefruit** juice increases the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Grazoprevir** increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 217. [Moderate] Study
- ▶ **Grazoprevir** is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 217. [Unknown] Theoretical
- ▶ **Grazoprevir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 218. [Moderate] Study

- ▶ **Grazoprevir** is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 219. [Unknown] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **HIV-protease inhibitors** slightly to moderately increase the exposure to **rosuvastatin**. Avoid or adjust dose. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Imatinib** moderately increases the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Study
- ▶ **Ledipasvir** is predicted to increase the exposure to **rosuvastatin**. Avoid. [Severe] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to statins (**atorvastatin**, **fluvastatin**, **pravastatin**, **simvastatin**). Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **rosuvastatin**. Adjust dose. [Moderate] Study → Also see TABLE 1 p. 1429
- ▶ **Leflunomide** is predicted to increase the exposure to statins (**atorvastatin**, **fluvastatin**, **pravastatin**, **simvastatin**). [Moderate] Study → Also see TABLE 1 p. 1429
- ▶ **Letermovir** moderately increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 217. [Severe] Study
- ▶ **Letermovir** is predicted to increase the exposure to **fluvastatin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **pravastatin**. Avoid or adjust dose. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to statins (**rosuvastatin**, **simvastatin**). Avoid. [Severe] Study
- ▶ **Lomitapide** increases the exposure to **atorvastatin**. Adjust **lomitapide** dose or separate administration by 12 hours, p. 222. [Mild] Study → Also see TABLE 1 p. 1429
- ▶ **Lomitapide** increases the exposure to **simvastatin**. Monitor and adjust **simvastatin** dose, p. 219. [Moderate] Study → Also see TABLE 1 p. 1429
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. [Severe] Study
- ▶ **Macrolides (clarithromycin)** moderately increase the exposure to **pravastatin**. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Anecdotal
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **pravastatin**. [Severe] Study
- ▶ **Macrolides (erythromycin)** markedly increase the exposure to **simvastatin**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **simvastatin**. [Severe] Study
- ▶ **Monoclonal antibodies (sarilumab)** are predicted to decrease the exposure to statins (**atorvastatin**, **simvastatin**). [Moderate] Study
- ▶ **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to statins (**atorvastatin**, **simvastatin**). Monitor and adjust dose. [Moderate] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to statins (**atorvastatin**, **simvastatin**). Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nicotinic acid** is predicted to increase the risk of rhabdomyolysis when given with statins. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** slightly decrease the exposure to **atorvastatin**. [Mild] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** moderately decrease the exposure to **simvastatin**. [Moderate] Study
- ▶ **Osimertinib** slightly increases the exposure to **rosuvastatin**. [Moderate] Study
- ▶ **Paritaprevir** (in fixed-dose combination) is predicted to increase the risk of rhabdomyolysis when given with **atorvastatin**. Avoid. [Severe] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **fluvastatin**. Avoid. [Moderate] Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) increases the exposure to **pravastatin**. Adjust **pravastatin** dose, p. 218. [Moderate] Study
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) slightly to moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 218. [Moderate] Study
- ▶ **Paritaprevir** (in fixed-dose combination) is predicted to increase the risk of rhabdomyolysis when given with **simvastatin**. Avoid. [Severe] Theoretical
- ▶ **Pazopanib** is predicted to affect the exposure to **atorvastatin**. [Moderate] Anecdotal
- ▶ **Pazopanib** is predicted to affect the exposure to statins (**pravastatin**, **rosuvastatin**, **simvastatin**). [Moderate] Theoretical
- ▶ **Rosuvastatin** is predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. [Severe] Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) markedly increases the exposure to **atorvastatin**. Avoid. [Severe] Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **fluvastatin**. [Moderate] Theoretical
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 218. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 218. [Moderate] Study
- ▶ **Pibrentasvir** (with glecaprevir) increases the exposure to **simvastatin**. Avoid. [Moderate] Study
- ▶ **Ranolazine** is predicted to increase the exposure to **atorvastatin**. [Moderate] Theoretical
- ▶ **Ranolazine** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 219. [Moderate] Study
- ▶ **Regorafenib** is predicted to increase the exposure to statins (**atorvastatin**, **fluvastatin**, **rosuvastatin**). [Moderate] Study
- ▶ **Ribociclib** (high-dose) is predicted to increase the exposure to **simvastatin**. Avoid. [Moderate] Theoretical
- ▶ **Ribociclib** is predicted to increase the exposure to statins (**pravastatin**, **rosuvastatin**). [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** markedly decrease the exposure to **atorvastatin**. Manufacturer advises take both drugs at the same time. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **fluvastatin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** very markedly decrease the exposure to **simvastatin**. [Moderate] Study
- ▶ **Sacubitril** is predicted to increase the exposure to statins. [Severe] Study
- ▶ **St John's wort** slightly decreases the exposure to **atorvastatin**. [Mild] Study
- ▶ **St John's wort** moderately decreases the exposure to **simvastatin**. [Moderate] Study
- ▶ **Fluvastatin** slightly increases the exposure to **sulfonylureas (glibenclamide)**. [Mild] Study
- ▶ **Tedizolid** is predicted to increase the exposure to statins (**atorvastatin**, **fluvastatin**, **rosuvastatin**). Avoid. [Moderate] Study
- ▶ **Teriflunomide** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 218. [Moderate] Study → Also see TABLE 1 p. 1429
- ▶ **Teriflunomide** is predicted to increase the exposure to statins (**atorvastatin**, **fluvastatin**, **pravastatin**, **simvastatin**). [Moderate] Study → Also see TABLE 1 p. 1429
- ▶ **Ticagrelor** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 219. [Moderate] Study
- ▶ **Tivozanib** is predicted to decrease the exposure to **rosuvastatin**. [Moderate] Theoretical

## Statins (continued)

- ▶ **Velpatasvir** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose and monitor adverse effects, p. 218. [\[Severe\]](#) Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **simvastatin**. Monitor adverse effects and adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **atorvastatin**. [\[Moderate\]](#) Study
- ▶ **Venetoclax** is predicted to increase the exposure to statins (**fluvastatin**, **pravastatin**, **rosuvastatin**, **simvastatin**). [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 217. [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) moderately increases the exposure to **pravastatin**. Monitor and adjust **pravastatin** dose, p. 218. [\[Moderate\]](#) Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) markedly increases the exposure to **rosuvastatin**. Avoid. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to statins (**fluvastatin**, **simvastatin**). Avoid. [\[Moderate\]](#) Theoretical

**stiripentol** → see antiepileptics

**Streptokinase** → see TABLE 3 p. 1429 (anticoagulant effects)

**Streptomycin** → see aminoglycosides

**Streptozocin** → see TABLE 1 p. 1429 (hepatotoxicity), TABLE 15 p. 1432 (myelosuppression), TABLE 2 p. 1429 (nephrotoxicity)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **streptozocin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical

**Strontium** → see TABLE 5 p. 1430 (thromboembolism)

- ▶ Oral **antacids** decrease the absorption of oral **strontium**.

Separate administration by 2 hours. [\[Moderate\]](#) Study

- ▶ Oral **calcium salts** decrease the exposure to **strontium**.

Separate administration by 2 hours. [\[Moderate\]](#) Study

- ▶ **Strontium** is predicted to decrease the absorption of **quinolones**. Avoid. [\[Moderate\]](#) Theoretical

- ▶ **Strontium** is predicted to decrease the absorption of **tetracyclines**. Avoid. [\[Moderate\]](#) Theoretical

- ▶ **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical
- ▶ **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. [\[Severe\]](#) Theoretical

**Sulfadiazine** → see sulfonamides

**Sulfadoxine** → see sulfonamides

**Sulfamethoxazole** → see sulfonamides

**Sulfasalazine** → see TABLE 1 p. 1429 (hepatotoxicity), TABLE 15 p. 1432 (myelosuppression)

- ▶ **Anti-androgens (darolutamide)** are predicted to increase the exposure to **sulfasalazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **sulfasalazine**. [\[Moderate\]](#) Theoretical
- ▶ **Sulfasalazine** decreases the concentration of **digoxin**. [\[Moderate\]](#) Study

- ▶ **Sulfasalazine** is predicted to decrease the absorption of **folates**. [\[Moderate\]](#) Study

- ▶ **Leflunomide** is predicted to increase the exposure to **sulfasalazine**. [\[Moderate\]](#) Study → Also see TABLE 1 p. 1429 → Also see TABLE 15 p. 1432

- ▶ **Regorafenib** is predicted to increase the exposure to **sulfasalazine**. [\[Moderate\]](#) Study → Also see TABLE 15 p. 1432

- ▶ **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [\[Moderate\]](#) Study

- ▶ **Teriflunomide** is predicted to increase the exposure to **sulfasalazine**. [\[Moderate\]](#) Study → Also see TABLE 1 p. 1429

- ▶ **Velpatasvir** is predicted to increase the exposure to **sulfasalazine**. [\[Moderate\]](#) Theoretical

- ▶ **Venetoclax** is predicted to increase the exposure to **sulfasalazine**. [\[Moderate\]](#) Theoretical

- ▶ **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine**. Avoid. [\[Severe\]](#) Theoretical

- ▶ **Anti-androgens (darolutamide)** are predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, micronazole)** are predicted to increase the exposure to **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (voriconazole)** are predicted to increase the concentration of **sulfonylureas**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Cephalosporins (ceftobiprole)** are predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **glimepiride**. Adjust dose. [Moderate] Theoretical
- ▶ **Chloramphenicol** is predicted to increase the exposure to **sulfonylureas**. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** increase the risk of hepatotoxicity when given with **glibenclamide**. Avoid. [Severe] Study
- ▶ **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas**. [Moderate] Theoretical
- ▶ **Filgotinib** is predicted to increase the exposure to **glibenclamide**. Avoid. [Moderate] Theoretical
- ▶ **Leflunomide** is predicted to increase the exposure to **glibenclamide**. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the concentration of **glibenclamide**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **sulfonylureas**. [Moderate] Theoretical
- ▶ **Nitisinone** is predicted to increase the exposure to **sulfonylureas** (**glimepiride**, **tolbutamide**). [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sulfonylureas**. [Moderate] Study
- ▶ **Statins (fluvastatin)** slightly increase the exposure to **glibenclamide**. [Mild] Study
- ▶ **Sulfonamides** are predicted to increase the exposure to **sulfonylureas**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **glibenclamide**. [Moderate] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **glibenclamide**. [Moderate] Theoretical
- Sulindac** → see NSAIDs
- Sulpiride** → see TABLE 8 p. 1430 (hypotension), TABLE 9 p. 1431 (QT-interval prolongation), TABLE 11 p. 1431 (CNS depressant effects)
- ▶ Oral **antacids** decrease the absorption of oral **sulpiride**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [Moderate] Theoretical → Also see TABLE 8 p. 1430 → Also see TABLE 9 p. 1431
- ▶ **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. [Severe] Theoretical → Also see TABLE 8 p. 1430
- ▶ **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. [Severe] Anecdotal → Also see TABLE 9 p. 1431
- ▶ **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. [Moderate] Study
- Sumatriptan** → see triptans
- Sunitinib** → see TABLE 15 p. 1432 (myelosuppression), TABLE 9 p. 1431 (QT-interval prolongation)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1044. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Antiarrhythmics (dronedrone)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1044. [Moderate] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **sunitinib**. Avoid

- or adjust **sunitinib** dose, p. 1044. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1044. [Moderate] Study
- ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Elbasvir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Grapefruit juice** is predicted to increase the exposure to **sunitinib**. Avoid. [Moderate] Theoretical
- ▶ **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1044. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Idelalisib** is predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1044. [Moderate] Study
- ▶ **Imatinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1432
- ▶ **Letermovir** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to slightly increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1044. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1044. [Moderate] Study → Also see TABLE 15 p. 1432
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **sunitinib**. [Moderate] Theoretical → Also see TABLE 15 p. 1432 → Also see TABLE 9 p. 1431
- ▶ **Sunitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1044. [Moderate] Study

**Suxamethonium** → see TABLE 20 p. 1433 (neuromuscular blocking effects)

- ▶ **Alkylating agents (cyclophosphamide)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
- ▶ **Antiarrhythmics (lidocaine)** are predicted to increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Clindamycin** increases the effects of **suxamethonium**. [Severe] Anecdotal
- ▶ **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. [Severe] Anecdotal
- ▶ **Suxamethonium** is predicted to increase the risk of cardiovascular adverse effects when given with **digoxin**. [Severe] Anecdotal
- ▶ **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. [Moderate] Theoretical
- ▶ Intravenous **magnesium** is predicted to increase the effects of **suxamethonium**. [Moderate] Study
- ▶ **Metoclopramide** increases the effects of **suxamethonium**. [Moderate] Study

## Suxamethonium (continued)

- ▶ **Penicillins** (**pipercillin**) increase the effects of suxamethonium. [Moderate] Study
- ▶ **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with suxamethonium. [Unknown] Theoretical

## Sympathomimetics, inotropic

dobutamine · dopamine

- ▶ **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Severe] Theoretical
- ▶ **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. [Moderate] Theoretical
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical
- ▶ **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **dopamine**. Avoid. [Severe] Anecdotal
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. [Severe] Anecdotal
- ▶ **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Severe] Theoretical
- ▶ **Tolcapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. [Moderate] Theoretical

## Sympathomimetics, vasoconstrictor

adrenaline/epinephrine · ephedrine · isometheptene · metaraminol · midodrine · noradrenaline/norepinephrine · phenylephrine · pseudoephedrine · xylometazoline

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application of **phenylephrine** and **xylometazoline**, the possibility of interactions should be borne in mind.

- ▶ **Ephedrine** increases the risk of adverse effects when given with **aminophylline**. Avoid in children. [Moderate] Study
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. [Severe] Theoretical
- ▶ **Atropine** increases the risk of severe hypertension when given with **phenylephrine**. [Severe] Study
- ▶ **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**). [Severe] Study
- ▶ **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**). [Severe] Study
- ▶ **Isometheptene** potentially increases the risk of adverse effects when given with **dopamine receptor agonists** (**bromocriptine**). Avoid. [Severe] Anecdotal
- ▶ **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**). [Moderate] Study
- ▶ **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **noradrenaline/norepinephrine**. [Severe] Anecdotal
- ▶ **Pseudoephedrine** increases the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Study
- ▶ **Sympathomimetics, vasoconstrictor** (**adrenaline/epinephrine**, **ephedrine**, **isometheptene**, **noradrenaline/norepinephrine**,

**phenylephrine**) are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. [Severe] Theoretical

- ▶ **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. [Severe] Anecdotal
- ▶ **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. [Severe] Study
- ▶ **Mianserin** decreases the effects of **ephedrine**. [Severe] Anecdotal
- ▶ **Sympathomimetics, vasoconstrictor** (**ephedrine**, **isometheptene**, **phenylephrine**, **pseudoephedrine**) are predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. [Severe] Study
- ▶ **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, vasoconstrictor (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**). [Severe] Theoretical
- ▶ **Sympathomimetics, vasoconstrictor** potentially increase the risk of a hypertensive crisis when given with **ozanimod**. [Severe] Theoretical
- ▶ **Ephedrine** increases the risk of adverse effects when given with **theophylline**. Avoid in children. [Moderate] Study
- ▶ **Tolcapone** is predicted to increase the effects of sympathomimetics, vasoconstrictor (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**). [Moderate] Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **ephedrine**. Avoid. [Severe] Study
- ▶ **Tricyclic antidepressants** increase the effects of sympathomimetics, vasoconstrictor (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**, **phenylephrine**). Avoid. [Severe] Study

**Tacalcitol** → see vitamin D substances

**Tacrolimus** → see TABLE 2 p. 1429 (nephrotoxicity), TABLE 16 p. 1433 (increased serum potassium)

- ▶ Pomelo and pomegranate juices might greatly increase the concentration of tacrolimus.
- ▶ Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- ▶ **Alcohol** increases the risk of facial flushing and skin irritation when given with topical **tacrolimus**. [Moderate] Study
- ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Antiarrhythmics** (**amiodarone**) are predicted to increase the concentration of **tacrolimus**. [Severe] Anecdotal
- ▶ **Antiarrhythmics** (**dronedarone**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles** (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Study
- ▶ **Antifungals, azoles** (**miconazole**) are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Brigatinib** potentially decreases the concentration of **tacrolimus**. Avoid. [Moderate] Theoretical
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the concentration of **tacrolimus**. [Severe] Study
- ▶ **Calcium channel blockers** (**nifedipine**) potentially increase the concentration of **tacrolimus**. Monitor concentration and adjust dose. [Severe] Anecdotal
- ▶ **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. [Severe] Theoretical
- ▶ **Chloramphenicol** increases the concentration of **tacrolimus**. [Severe] Study
- ▶ **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. [Severe] Study → Also see TABLE 2 p. 1429 → Also see TABLE 16 p. 1433

- ▶ **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **Crizotinib** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
  - ▶ **Danazol** potentially increases the concentration of **tacrolimus**. [\[Severe\]](#) Anecdotal
  - ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of **endothelin receptor antagonists (bosentan)**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **tacrolimus**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Glecaprevir** (with pibrentasvir) slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [\[Mild\]](#) Study
  - ▶ **Grapefruit** juice greatly increases the concentration of **tacrolimus**. Avoid. [\[Severe\]](#) Study
  - ▶ **Grazoprevir** increases the exposure to **tacrolimus**. [\[Moderate\]](#) Study
  - ▶ **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **Imatinib** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
  - ▶ **Larotrectinib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [\[Mild\]](#) Theoretical
  - ▶ **Letermovir** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
  - ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
  - ▶ **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [\[Moderate\]](#) Theoretical
  - ▶ **Lorlatinib** is predicted to decrease the exposure to **tacrolimus**. Avoid. [\[Moderate\]](#) Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
  - ▶ **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **tacrolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
  - ▶ **Nilotinib** is predicted to increase the concentration of **tacrolimus**. [\[Severe\]](#) Study
  - ▶ **NNRTIs (doravirine)** are predicted to decrease the exposure to **tacrolimus**. Monitor **tacrolimus** concentration and adjust dose, p. 887. [\[Moderate\]](#) Theoretical
  - ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Pibrentasvir** (with glecaprevir) slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. [\[Mild\]](#) Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. [\[Severe\]](#) Anecdotal
  - ▶ **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. [\[Moderate\]](#) Theoretical
  - ▶ **Rifamycins (rifampicin)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. [\[Severe\]](#) Study
  - ▶ **Rucaparib** is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. [\[Moderate\]](#) Study
  - ▶ **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. [\[Severe\]](#) Study
  - ▶ **St John's wort** decreases the concentration of **tacrolimus**. Avoid. [\[Severe\]](#) Study
  - ▶ **Tacrolimus** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [\[Severe\]](#) Theoretical
  - ▶ **Tacrolimus** increases the exposure to **tofacinib**. Avoid. [\[Severe\]](#) Study
  - ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine**. [\[Severe\]](#) Anecdotal
- Tadalafil** → see phosphodiesterase type-5 inhibitors
- Talazoparib** → see TABLE 15 p. 1432 (myelosuppression)
- ▶ **Antiarrhythmics (amiodarone, dronedarone)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1052. [\[Severe\]](#) Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1052. [\[Severe\]](#) Study
  - ▶ **Calcium channel blockers (verapamil)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1052. [\[Severe\]](#) Study
  - ▶ **Ciclosporin** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1052. [\[Severe\]](#) Study
  - ▶ **Eltrombopag** potentially increases the exposure to **talazoparib**. Avoid or monitor. [\[Moderate\]](#) Theoretical
  - ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1052. [\[Severe\]](#) Study
  - ▶ **Lapatinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1052. [\[Severe\]](#) Study
  - ▶ **Leflunomide** potentially increases the exposure to **talazoparib**. Avoid or monitor. [\[Moderate\]](#) Theoretical → Also see TABLE 15 p. 1432
  - ▶ **Macrolides** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1052. [\[Severe\]](#) Study
  - ▶ **Ranolazine** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1052. [\[Severe\]](#) Study
  - ▶ **Teriflunomide** potentially increases the exposure to **talazoparib**. Avoid or monitor. [\[Moderate\]](#) Theoretical
  - ▶ **Vemurafenib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1052. [\[Severe\]](#) Study
- Tamoxifen** → see TABLE 5 p. 1430 (thromboembolism)
- ▶ **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
  - ▶ **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
  - ▶ **Tamoxifen** increases the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
  - ▶ **Rifamycins (rifampicin)** markedly decrease the exposure to **tamoxifen**. [\[Unknown\]](#) Study
  - ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
  - ▶ **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. [\[Severe\]](#) Study
- Tamsulosin** → see alpha blockers
- Tapentadol** → see opioids
- Taxanes** → see TABLE 15 p. 1432 (myelosuppression), TABLE 12 p. 1432 (peripheral neuropathy)
- cabazitaxel · docetaxel · paclitaxel
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **docetaxel**. [\[Severe\]](#) Theoretical
  - ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **taxanes (cabazitaxel, paclitaxel)**. Avoid. [\[Severe\]](#) Study
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **cabazitaxel**. [\[Moderate\]](#) Theoretical
  - ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **paclitaxel**. [\[Severe\]](#) Theoretical

## Taxanes (continued)

- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical → Also see TABLE 12 p. 1432
- ▶ Antiepileptics (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to taxanes (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study → Also see TABLE 12 p. 1432
- ▶ Antifungals, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ Antifungals, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ Antifungals, azoles (**miconazole**) are predicted to increase the concentration of **docetaxel**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ Calcium channel blockers (**diltiazem**, **verapamil**) are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Ceritinib** is predicted to increase the exposure to **paclitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1432
- ▶ **Clopidogrel** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- ▶ **Cobicistat** is predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **paclitaxel**. Adjust dose. [Moderate] Study
- ▶ Endothelin receptor antagonists (**bosentan**) are predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ Fibrates (**gemfibrozil**) are predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ HIV-protease inhibitors are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1432
- ▶ Iron chelators (**deferalexiron**) are predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
- ▶ **Lapatinib** slightly increases the exposure to **paclitaxel**. [Severe] Study
- ▶ **Leflunomide** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal → Also see TABLE 15 p. 1432
- ▶ **Letermovir** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
- ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes (**docetaxel**, **paclitaxel**). Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ Macrolides (**clarithromycin**) are predicted to increase the exposure to **cabazitaxel**. Avoid. [Severe] Study
- ▶ Macrolides (**clarithromycin**) are predicted to moderately increase the exposure to **docetaxel**. Avoid or adjust dose. [Severe] Study

- ▶ Macrolides (**clarithromycin**) are predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
  - ▶ Macrolides (**erythromycin**) are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
  - ▶ **Mirabegron** is predicted to increase the exposure to **paclitaxel**. [Mild] Theoretical
  - ▶ **Mitotane** is predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical → Also see TABLE 15 p. 1432
  - ▶ **Mitotane** is predicted to decrease the exposure to taxanes (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study → Also see TABLE 15 p. 1432
  - ▶ Neurokinin-1 receptor antagonists (**aprepitant**, **netupitant**) are predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical
  - ▶ Neurokinin-1 receptor antagonists (**netupitant**) slightly increase the exposure to **docetaxel**. [Moderate] Study
  - ▶ Neurokinin-1 receptor antagonists (**netupitant**) are predicted to increase the exposure to **paclitaxel**. [Moderate] Study
  - ▶ **Nilotinib** is predicted to increase the exposure to **cabazitaxel**. [Moderate] Theoretical → Also see TABLE 15 p. 1432
  - ▶ NNRTIs (**efavirenz**, **nevirapine**) are predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
  - ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
  - ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **paclitaxel**. [Moderate] Study
  - ▶ **Pitolisant** is predicted to decrease the exposure to **docetaxel**. Avoid. [Severe] Theoretical
  - ▶ **Pitolisant** is predicted to decrease the exposure to **paclitaxel**. [Mild] Theoretical
  - ▶ Rifamycins (**rifampicin**) are predicted to decrease the exposure to **docetaxel**. [Severe] Theoretical
  - ▶ Rifamycins (**rifampicin**) are predicted to decrease the exposure to taxanes (**cabazitaxel**, **paclitaxel**). Avoid. [Severe] Study
  - ▶ **St John's wort** is predicted to decrease the exposure to **cabazitaxel**. Avoid. [Severe] Study
  - ▶ **Teriflunomide** is predicted to increase the concentration of **paclitaxel**. [Severe] Anecdotal
  - ▶ **Velpatasvir** is predicted to increase the exposure to **paclitaxel**. [Severe] Theoretical
  - ▶ **Vemurafenib** is predicted to increase the exposure to **paclitaxel**. Use with caution and adjust dose. [Severe] Theoretical
- Tazarotene** → see retinoids
- Tedizolid**
- ▶ **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. [Moderate] Theoretical
  - ▶ **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. [Moderate] Theoretical
  - ▶ **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. [Moderate] Theoretical
  - ▶ **Tedizolid** is predicted to increase the exposure to **statins** (**atorvastatin**, **fluvastatin**, **rosuvastatin**). Avoid. [Moderate] Study
  - ▶ **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. [Moderate] Study
  - ▶ **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [Moderate] Study
- Tegafur** → see TABLE 15 p. 1432 (myelosuppression)
- ▶ **Tegafur** potentially increases the concentration of antiepileptics (**fosphenytoin**, **phenytoin**). Monitor concentration and adjust dose. [Severe] Anecdotal
  - ▶ **Tegafur** increases the anticoagulant effect of **coumarins**. [Moderate] Theoretical
  - ▶ **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
  - ▶ H<sub>2</sub> receptor antagonists (**cimetidine**) are predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical
  - ▶ Live vaccines are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
  - ▶ **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. [Severe] Theoretical → Also see TABLE 15 p. 1432

## Teicoplanin

**GENERAL INFORMATION** If other nephrotoxic or neurotoxic drugs are given, monitor renal and auditory function on prolonged administration.

**Telavancin** → see TABLE 2 p. 1429 (nephrotoxicity), TABLE 19 p. 1433 (ototoxicity), TABLE 9 p. 1431 (QT-interval prolongation)

**Telmisartan** → see angiotensin-II receptor antagonists

### Telotristat ethyl

▶ **Telotristat ethyl** decreases the exposure to **benzodiazepines (midazolam)**. [Moderate] Study

▶ **Telotristat ethyl** is predicted to decrease the exposure to **NNRTIs (doravirine)**. Avoid or adjust doravirine p. 683 or lamivudine with tenofovir disoproxil and doravirine p. 692 dose. [Severe] Theoretical

▶ **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before **octreotide**. [Moderate] Study

**Temazepam** → see benzodiazepines

**Temocillin** → see penicillins

**Temozolomide** → see alkylating agents

**Temsirolimus** → see TABLE 15 p. 1432 (myelosuppression)

▶ **ACE inhibitors** are predicted to increase the risk of angioedema when given with **temsirolimus**. [Moderate] Theoretical

▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study

▶ **Antiarrhythmics (dronedaron)** are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical

▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study

▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical

▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical

▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the concentration of and the risk of angioedema when given with **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical

▶ **Temsirolimus** is predicted to increase the risk of angioedema when given with **calcium channel blockers (amlodipine, felodipine, lacidipine, lercanidipine, nifedipine, nimodipine)**. [Moderate] Theoretical

▶ **Cobicistat** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical

▶ **Crizotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical

▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical

▶ **Entrectinib** is predicted to increase the exposure to **temsirolimus**. [Mild] Theoretical

▶ **Grapefruit** juice is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical

▶ **HIV-protease inhibitors** are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical

▶ **Idelalisib** is predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical

▶ **Imatinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1432

▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

▶ **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical

▶ **Macrolides (clarithromycin)** are predicted to increase the concentration of **temsirolimus**. Avoid. [Severe] Theoretical

▶ **Macrolides (erythromycin)** are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical

▶ **Mitotane** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study → Also see TABLE 15 p. 1432

▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical

▶ **Nilotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 15 p. 1432

▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical

▶ **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. [Severe] Theoretical

▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Study

▶ **St John's wort** is predicted to decrease the concentration of **temsirolimus**. Avoid. [Severe] Theoretical

**Tenecteplase** → see TABLE 3 p. 1429 (anticoagulant effects)

### Tenofovir alafenamide

▶ **Antiepileptics (carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical

▶ **Ciclosporin** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical

▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical

▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** increase the exposure to **tenofovir alafenamide**. Avoid or adjust dose. [Moderate] Study

▶ **HIV-protease inhibitors (tipranavir)** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical

▶ **Leflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical

▶ **Rifamycins** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical

▶ **St John's wort** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. [Moderate] Theoretical

▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical

**Tenofovir disoproxil** → see TABLE 2 p. 1429 (nephrotoxicity)

▶ **Ciclosporin** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical → Also see TABLE 2 p. 1429

▶ **Eltrombopag** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical

▶ **HIV-protease inhibitors (atazanavir, darunavir, lopinavir)** are predicted to increase the risk of renal impairment when given with **tenofovir disoproxil**. [Severe] Anecdotal

▶ **Ledipasvir** (with sofosbuvir) slightly increases the exposure to **tenofovir disoproxil**. [Moderate] Study

▶ **Leflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical

▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical

▶ **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. [Severe] Study

▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) potentially increases the concentration of **tenofovir disoproxil**. [Severe] Study

**Tenoxicam** → see NSAIDs

**Terazosin** → see alpha blockers

### Terbinafine

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

▶ **Terbinafine** is predicted to increase the exposure to **anticholinesterases, centrally acting (galantamine)**. Monitor and adjust dose. [Moderate] Study

▶ **Terbinafine** is predicted to moderately increase the exposure to **antipsychotics, second generation (aripiprazole)**. Adjust aripiprazole dose, p. 415. [Moderate] Study

▶ **Terbinafine** is predicted to increase the exposure to **antipsychotics, second generation (risperidone)**. Adjust dose. [Moderate] Study

▶ **Terbinafine** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. [Severe] Study

## Terbinafine (continued)

- ▶ Terbinafine is predicted to increase the exposure to **beta blockers, selective (metoprolol, nebivolol)**. [Moderate] Study
- ▶ Terbinafine is predicted to slightly increase the exposure to **darifenacin**. [Mild] Study
- ▶ Terbinafine is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ Terbinafine is predicted to increase the exposure to **mexiletine**. [Moderate] Study
- ▶ Terbinafine is predicted to decrease the efficacy of **opioids (codeine)**. [Moderate] Theoretical
- ▶ Terbinafine is predicted to decrease the efficacy of **opioids (tramadol)**. [Severe] Study
- ▶ Terbinafine is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** decrease the exposure to **terbinafine**. Adjust dose. [Moderate] Study
- ▶ Terbinafine is predicted to increase the exposure to **SSRIs (citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline)**. [Moderate] Theoretical
- ▶ Terbinafine is predicted to increase the exposure to **SSRIs (fluoxetine)**. Adjust dose. [Moderate] Theoretical
- ▶ Terbinafine moderately increases the exposure to **SSRIs (paroxetine)**. [Moderate] Study
- ▶ Terbinafine is predicted to decrease the efficacy of **tamoxifen**. Avoid. [Severe] Study
- ▶ Terbinafine is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
- ▶ Terbinafine is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [Severe] Study
- ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

**Terbutaline** → see beta<sub>2</sub> agonists**Teriflunomide** → see TABLE 1 p. 1429 (hepatotoxicity)

- ▶ **Teriflunomide** is predicted to increase the exposure to **adefovir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **agomelatine**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **alpelisib**. [Moderate] Theoretical
- ▶ **Teriflunomide** decreases the exposure to **aminophylline**. Adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **anaesthetics, local (ropivacaine)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **anthracyclines (daunorubicin, doxorubicin, mitoxantrone)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **antipsychotics, second generation (clozapine)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to decrease the exposure to **antipsychotics, second generation (olanzapine)**. Monitor and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** potentially increases the exposure to **baricitinib**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **cephalosporins (cefaclor)**. [Moderate] Study
- ▶ **Teriflunomide** affects the anticoagulant effect of **coumarins**. [Severe] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **duloxetine**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Study
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with **teriflunomide**. Avoid. [Severe] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **ganciclovir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **H<sub>2</sub> receptor antagonists (cimetidine, famotidine)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **larotrectinib**. [Mild] Study
- ▶ **Teriflunomide** is predicted to increase the concentration of **letermovir**. [Moderate] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **loop diuretics (furosemide)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **meglinitides (nateglinide)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **meglinitides (repaglinide)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **melatonin**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **methotrexate**. [Moderate] Study → Also see TABLE 1 p. 1429
- ▶ **Teriflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **montelukast**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **NRTIs (zidovudine)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **NSAIDs (indometacin, ketoprofen)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **oseltamivir**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to the active metabolite of **ozanimod**. Avoid. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **penicillins (benzylpenicillin)**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **pioglitazone**. [Moderate] Study
- ▶ **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **quinolones (ciprofloxacin)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **rifamycins (rifampicin)**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust selexipag dose, p. 196. [Moderate] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **statins (atorvastatin, fluvastatin, pravastatin, simvastatin)**. [Moderate] Study → Also see TABLE 1 p. 1429
- ▶ **Teriflunomide** moderately increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose, p. 218. [Moderate] Study → Also see TABLE 1 p. 1429
- ▶ **Teriflunomide** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Study → Also see TABLE 1 p. 1429
- ▶ **Teriflunomide** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Study
- ▶ **Teriflunomide** potentially increases the exposure to **talazoparib**. Avoid or monitor. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the concentration of **taxanes (paclitaxel)**. [Severe] Anecdotal
- ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. [Moderate] Theoretical
- ▶ **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- ▶ **Teriflunomide** moderately decreases the exposure to **tizanidine**. [Mild] Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **topotecan**. [Moderate] Study

**Tetanus immunoglobulin** → see immunoglobulins**Tetrabenazine** → see TABLE 9 p. 1431 (QT-interval prolongation), TABLE 11 p. 1431 (CNS depressant effects)

- ▶ **Bupropion** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
- ▶ **Cinacalcet** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [Moderate] Study
- ▶ **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. [Moderate] Theoretical

- ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAO-B inhibitors**. [\[Severe\]](#) Theoretical
- ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAOIs**, **irreversible**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical
- ▶ **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **moclobemide**. [\[Severe\]](#) Theoretical
- ▶ **SSRIs** (**fluoxetine**, **paroxetine**) are predicted to increase the exposure to the active metabolite of **tetrabenazine**. [\[Moderate\]](#) Study
- ▶ **Terbinafine** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. [\[Moderate\]](#) Study

**Tetracaine** → see anaesthetics, local

**Tetracycline** → see tetracyclines

**Tetracyclines** → see TABLE 1 p. 1429 (hepatotoxicity)

demeclocycline • doxycycline • lymecycline • minocycline • oxytetracycline • tetracycline

- ▶ Dairy products decrease the absorption of **demeclocycline**.
- ▶ Dairy products decrease the exposure to **oxytetracycline**.
- ▶ Interactions do not generally apply to topical use of **oxytetracycline** unless specified.
- ▶ Dairy products decrease the exposure to **tetracycline**—manufacturer advises take 1 hour before or 2 hours after dairy products.
- ▶ **ACE inhibitors** (**quinapril**) (tablet) decrease the absorption of oral **tetracycline**. Avoid. [\[Moderate\]](#) Study
- ▶ Oral **antacids** decrease the absorption of oral **tetracyclines**. Separate administration by 2 to 3 hours. [\[Moderate\]](#) Study
- ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) decrease the exposure to **doxycycline**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) decrease the exposure to **doxycycline**. Monitor and adjust dose. [\[Moderate\]](#) Study → Also see TABLE 1 p. 1429
- ▶ **Tetracycline** decreases the concentration of **antimalarials** (**atovaquone**). [\[Moderate\]](#) Study
- ▶ **Bismuth** greatly decreases the efficacy of **tetracyclines**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ **Calcium salts** (**calcium carbonate**) are predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [\[Moderate\]](#) Theoretical
- ▶ **Tetracyclines** increase the risk of bleeding events when given with **coumarins**. [\[Moderate\]](#) Anecdotal
- ▶ Oral **iron** decreases the absorption of oral **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after iron. [\[Moderate\]](#) Study
- ▶ **Kaolin** is predicted to decrease the absorption of **tetracyclines**. [\[Moderate\]](#) Theoretical
- ▶ **Lanthanum** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 hours. [\[Moderate\]](#) Theoretical
- ▶ **Tetracyclines** are predicted to increase the risk of lithium toxicity when given with **lithium**. Avoid or adjust dose. [\[Severe\]](#) Anecdotal
- ▶ **Mitotane** decreases the exposure to **doxycycline**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Retinoids** (**acitretin**, **alitretinoin**, **isotretinoin**, **tretinoin**) increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. [\[Severe\]](#) Anecdotal
- ▶ **Rifamycins** (**rifampicin**) decrease the exposure to **doxycycline**. Monitor and adjust dose. [\[Moderate\]](#) Study
- ▶ **Strontium** is predicted to decrease the absorption of **tetracyclines**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [\[Moderate\]](#) Theoretical
- ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiarrhythmics** (**dronedarone**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with potent CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with potent CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with potent CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with potent CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Letermovir** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with potent CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists** (**aprepitant**, **netupitant**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Rifamycins** are predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical

#### Tezacaftor

**FOOD AND LIFESTYLE** Avoid bitter (Seville) oranges as they are predicted to increase the exposure to tezacaftor.

- ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiarrhythmics** (**dronedarone**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with potent CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with potent CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with potent CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with potent CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Letermovir** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with potent CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists** (**aprepitant**, **netupitant**) are predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **tezacaftor**. Adjust tezacaftor with ivacaftor p. 311 or tezacaftor with ivacaftor and elexacaftor p. 311 dose with moderate CYP3A4 inhibitors. [\[Severe\]](#) Study
- ▶ **Rifamycins** are predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **tezacaftor**. Avoid. [\[Severe\]](#) Theoretical

**Thalidomide** → see TABLE 6 p. 1430 (bradycardia), TABLE 15 p. 1432 (myelosuppression), TABLE 12 p. 1432 (peripheral neuropathy), TABLE 5 p. 1430 (thromboembolism), TABLE 11 p. 1431 (CNS depressant effects)

## Thalidomide (continued)

- **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. [Severe] Study
- **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. [Severe] Theoretical

**Theophylline** → see TABLE 17 p. 1433 (reduced serum potassium)

**FOOD AND LIFESTYLE** Smoking can increase theophylline clearance and increased doses of theophylline are therefore required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.

- **Aciclovir** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Severe] Theoretical
- **Theophylline** decreases the efficacy of **antiarrhythmics (adenosine)**. Separate administration by 24 hours. [Mild] Study
- **Antiepileptics (carbamazepine)** potentially increase the clearance of **theophylline** and **theophylline** decreases the exposure to **antiepileptics (carbamazepine)**. Adjust dose. [Moderate] Anecdotal
- **Antiepileptics (fosphenytoin, phenytoin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- **Antiepileptics (phenobarbital, primidone)** are predicted to increase the clearance of **theophylline**. Adjust dose. [Moderate] Theoretical
- **Antiepileptics (stiripentol)** are predicted to increase the exposure to **theophylline**. Avoid. [Moderate] Theoretical
- **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical
- **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. [Severe] Theoretical
- **Caffeine citrate** decreases the clearance of **theophylline**. [Moderate] Study
- **Combined hormonal contraceptives** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- **Theophylline** increases the risk of agitation when given with **doxapram**. [Moderate] Study
- **Enteral feeds** decrease the exposure to **theophylline**. [Moderate] Study
- **Esketamine** is predicted to increase the risk of seizures when given with **theophylline**. Avoid. [Severe] Theoretical
- **H<sub>2</sub> receptor antagonists (cimetidine)** increase the concentration of **theophylline**. Adjust dose. [Severe] Study
- **HIV-protease inhibitors (ritonavir)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. [Moderate] Study
- **Iron chelators (deferasirox)** increase the exposure to **theophylline**. Avoid. [Moderate] Study
- **Isoniazid** is predicted to affect the clearance of **theophylline**. [Severe] Anecdotal
- **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
- **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. [Moderate] Anecdotal
- **Macrolides (azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. [Moderate] Anecdotal
- **Macrolides (erythromycin)** decrease the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **macrolides (erythromycin)**. Adjust dose. [Severe] Study
- **Methotrexate** decreases the clearance of **theophylline**. [Moderate] Study
- **Mexiletine** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
- **Monoclonal antibodies (blinatumomab)** are predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical

- **Monoclonal antibodies (sarilumab)** potentially affect the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - **Monoclonal antibodies (tocilizumab)** are predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - **Obeticholic acid** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical
  - **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. [Severe] Study
  - **Theophylline** is predicted to slightly increase the exposure to **phosphodiesterase type-4 inhibitors (roflumilast)**. Avoid. [Moderate] Theoretical
  - **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Theoretical
  - **Rifamycins (rifampicin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
  - **Rucaparib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. [Moderate] Study
  - **SSRIs (fluvoxamine)** moderately to markedly increase the exposure to **theophylline**. Avoid. [Severe] Study
  - **St John's wort** potentially decreases the exposure to **theophylline**. [Severe] Anecdotal
  - **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. [Moderate] Study
  - **Sympathomimetics, vasoconstrictor (ephedrine)** increase the risk of adverse effects when given with **theophylline**. Avoid in children. [Moderate] Study
  - **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. [Moderate] Study
  - **Valaciclovir** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical
  - **Vemurafenib** is predicted to increase the exposure to **theophylline**. Use with caution or avoid. [Moderate] Theoretical
- Thiazide diuretics** → see TABLE 18 p. 1433 (hyponatraemia), TABLE 8 p. 1430 (hypotension), TABLE 17 p. 1433 (reduced serum potassium)
- benzoflumezide · chlorthalidone · chlortalidone · hydrochlorothiazide · hydroflumethiazide · indapamide · metolazone · xipamide
- **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. [Severe] Theoretical
  - **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical
  - **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. [Severe] Anecdotal
  - **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. [Severe] Study
  - **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. [Severe] Theoretical → Also see TABLE 18 p. 1433
  - **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. [Moderate] Anecdotal
  - **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [Severe] Theoretical
  - **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [Moderate] Theoretical
- Thiopental** → see TABLE 8 p. 1430 (hypotension), TABLE 11 p. 1431 (CNS depressant effects)
- **Sulfonamides** are predicted to increase the effects of **thiopental**. [Moderate] Theoretical
  - **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [Moderate] Study → Also see TABLE 8 p. 1430 → Also see TABLE 11 p. 1431
- Thiotepa** → see alkylating agents
- Thrombin inhibitors** → see TABLE 3 p. 1429 (anticoagulant effects)
- argatroban · bivalirudin · dabigatran
- **Anti-androgens (apalutamide)** are predicted to decrease the exposure to **dabigatran**. [Mild] Study
  - **Antiarrhythmics (amiodarone)** increase the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 148. [Moderate] Study

- ▶ **Antiarrhythmics (dronedarone)** slightly increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Antiepileptics (phenytoin)** are predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (isavuconazole)** are predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole)** are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Brigatinib** potentially increases the concentration of **dabigatran**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (verapamil)** increase the exposure to **dabigatran**. Adjust **dabigatran** dose, p. 148. [Severe] Study
- ▶ **Ceritinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Ciclosporin** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Elbasvir** is predicted to increase the concentration of **dabigatran**. [Moderate] Theoretical
- ▶ **Eliglustat** is predicted to increase the exposure to **dabigatran**. Adjust dose. [Moderate] Study
- ▶ **Glecaprevir** (with **pibrentasvir**) increases the exposure to **dabigatran**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (lopinavir, ritonavir, saquinavir)** are predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Lapatinib** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Ledipasvir** is predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Letermovir** is predicted to decrease the concentration of **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **dabigatran**. [Moderate] Theoretical
- ▶ **Mirabegron** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Neratinib** is predicted to increase the exposure to **dabigatran**. [Moderate] Study
- ▶ **Paritaprevir** (with **ritonavir** and **ombitasvir**) is predicted to increase the exposure to **dabigatran**. [Severe] Study
- ▶ **Pibrentasvir** (with **glecaprevir**) increases the exposure to **dabigatran**. Avoid. [Moderate] Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **dabigatran**. [Mild] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. [Severe] Theoretical
- ▶ **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **dabigatran**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Tacrolimus** is predicted to increase the exposure to **dabigatran**. Avoid. [Severe] Theoretical
- ▶ **Velpatasvir** increases the exposure to **dabigatran**. Avoid. [Severe] Study
- ▶ **Vemurafenib** increases the exposure to **dabigatran**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **dabigatran**. Avoid or adjust dose. [Severe] Study
- ▶ **Voxilaprevir** (with **sofosbuvir** and **velpatasvir**) increases the concentration of **dabigatran**. Avoid. [Severe] Study

#### Thyroid hormones

levothyroxine · liothyronine

- ▶ Oral **antacids** are predicted to decrease the absorption of oral **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Anecdotal
- ▶ **Anti-androgens (apalutamide)** potentially decrease the exposure to **levothyroxine**. [Mild] Theoretical

- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the risk of thyroid dysfunction when given with **thyroid hormones**. Avoid. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- ▶ Oral **calcium salts** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Anecdotal
- ▶ **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors (ritonavir)** decrease the concentration of **levothyroxine**. MHRA advises monitor TSH for at least one month after starting or stopping **ritonavir**. [Moderate] Anecdotal
- ▶ Oral **hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. [Moderate] Theoretical
- ▶ Oral **iron** decreases the absorption of oral **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
- ▶ **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. [Moderate] Study
- ▶ **Paritaprevir** (with **ritonavir** and **ombitasvir**) is predicted to increase the exposure to **levothyroxine**. Monitor and adjust dose. [Moderate] Theoretical
- ▶ **Sucralfate** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. [Moderate] Study
- Tiagabine** → see antiepileptics
- Tiaprofenic acid** → see NSAIDs
- Tibolone** → see TABLE 5 p. 1430 (thromboembolism)
- Ticagrelor** → see TABLE 4 p. 1429 (antiplatelet effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Ticagrelor** increases the concentration of **digoxin**. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. [Severe] Theoretical
- ▶ **Grapefruit** juice moderately increases the exposure to **ticagrelor**. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides (azithromycin)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **ticagrelor**. [Moderate] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. [Severe] Study

Ticagrelor (continued)

- ▶ **St John's wort** is predicted to decrease the exposure to ticagrelor. [Moderate] Theoretical
- ▶ Ticagrelor slightly increases the exposure to **statins (simvastatin)**. Adjust **simvastatin** dose, p. 219. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to ticagrelor. Use with caution or avoid. [Severe] Study
- Tigecycline** → see TABLE 1 p. 1429 (hepatotoxicity)
- ▶ Tigecycline increases the risk of bleeding events when given with **coumarins**. [Moderate] Anecdotal
- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with tigecycline. Avoid. [Severe] Anecdotal

**Tildrakizumab** → see monoclonal antibodies

**Timolol** → see beta blockers, non-selective

**Tinidazole**

- ▶ **Alcohol** potentially causes a disulfiram-like reaction when given with tinidazole. Avoid for 72 hours stopping treatment. [Moderate] Theoretical
- ▶ Tinidazole is predicted to increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. [Severe] Theoretical

**Tinzaparin** → see low molecular-weight heparins

**Tioguanine** → see TABLE 15 p. 1432 (myelosuppression)

- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with tioguanine. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical

**Tiotropium** → see TABLE 10 p. 1431 (antimuscarinics)

**Tipranavir** → see HIV-protease inhibitors

**Tirofiban** → see TABLE 3 p. 1429 (anticoagulant effects)

**Tivozanib**

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to tivozanib. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to tivozanib. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to tivozanib. [Severe] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to tivozanib. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to tivozanib. Avoid. [Severe] Study
- ▶ Tivozanib is predicted to decrease the exposure to **statins (rosuvastatin)**. [Moderate] Theoretical

**Tizanidine** → see TABLE 6 p. 1430 (bradycardia), TABLE 8 p. 1430 (hypotension), TABLE 9 p. 1431 (QT-interval prolongation), TABLE 11 p. 1431 (CNS depressant effects)

- ▶ **Antiepileptics (fosphenytoin, phenytoin)** moderately decrease the exposure to tizanidine. [Mild] Study
- ▶ **Combined hormonal contraceptives** increase the exposure to tizanidine. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors (ritonavir)** moderately decrease the exposure to tizanidine. [Mild] Study
- ▶ **Iron chelators (deferasirox)** are predicted to increase the exposure to tizanidine. Avoid. [Moderate] Theoretical
- ▶ **Leflunomide** moderately decreases the exposure to tizanidine. [Mild] Study
- ▶ **Mexiletine** increases the exposure to tizanidine. Avoid. [Moderate] Study
- ▶ **Osetholic acid** is predicted to increase the exposure to tizanidine. [Severe] Theoretical
- ▶ **Quinolones (ciprofloxacin)** increase the exposure to tizanidine. Avoid. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to tizanidine. [Mild] Study
- ▶ **Rucaparib** is predicted to increase the exposure to tizanidine. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluvoxamine)** very markedly increase the exposure to tizanidine. Avoid. [Severe] Study
- ▶ **Teriflunomide** moderately decreases the exposure to tizanidine. [Mild] Study
- ▶ **Vemurafenib** moderately increases the exposure to tizanidine. Use with caution or avoid. [Moderate] Theoretical → Also see

TABLE 9 p. 1431

**Tobramycin** → see aminoglycosides

**Tocilizumab** → see monoclonal antibodies

**Tofacitinib**

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to tofacitinib. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (dronedarone)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to tofacitinib. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole)** increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **Antifungals, azoles (isavuconazole)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **Antifungals, azoles (posaconazole)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **Ciclosporin** increases the exposure to tofacitinib. Avoid. [Severe] Study
- ▶ **Cobicistat** is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **Crizotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to tofacitinib. [Moderate] Study
- ▶ **Filgotinib** is predicted to increase the risk of immunosuppression when given with tofacitinib. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **Imatinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with tofacitinib. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **Macrolides (erythromycin)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to tofacitinib. Avoid. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **Nilotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to tofacitinib. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to tofacitinib. Avoid. [Severe] Study
- ▶ **SSRIs (fluoxetine, fluvoxamine)** given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to tofacitinib. Adjust tofacitinib dose, p. 1154. [Moderate] Study
- ▶ **St John's wort** is predicted to decrease the exposure to tofacitinib. [Moderate] Study
- ▶ **Tacrolimus** increases the exposure to tofacitinib. Avoid. [Severe] Study

**Tolbutamide** → see sulfonylureas

## Tolcapone

- ▶ Tolcapone increases the exposure to **levodopa**. Monitor and adjust dose. [Moderate] Study
- ▶ Tolcapone is predicted to increase the effects of **MAOIs**, **irreversible**. Avoid. [Severe] Theoretical
- ▶ Tolcapone is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics**, **inotropic**. [Moderate] Theoretical
- ▶ Tolcapone is predicted to increase the effects of **sympathomimetics**, **vasoconstrictor** (**adrenaline/epinephrine**, **noradrenaline/norepinephrine**). [Moderate] Theoretical

**Tolfenamic acid** → see NSAIDs

**Tolterodine** → see TABLE 9 p. 1431 (QT-interval prolongation), TABLE 10 p. 1431 (antimuscarinics)

- ▶ **Antiarrhythmics** (**dronedaron**) are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1431
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. [Moderate] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1431
- ▶ **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **tolterodine**. Avoid. [Severe] Study → Also see TABLE 9 p. 1431
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Neurokinin-1 receptor antagonists** (**aprepitant**, **netupitant**) are predicted to increase the exposure to **tolterodine**. [Mild] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **tolterodine**. [Mild] Theoretical → Also see TABLE 9 p. 1431

**Tolvaptan** → see TABLE 16 p. 1433 (increased serum potassium)

**GENERAL INFORMATION** Avoid concurrent use of drugs that increase serum-sodium concentrations.

- ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Antiarrhythmics** (**dronedaron**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 708. [Moderate] Study
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Antifungals**, azoles (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 708. [Moderate] Study
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 708. [Severe] Study

- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 708. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 708. [Severe] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 708. [Moderate] Study
- ▶ **Tolvaptan** increases the concentration of **digoxin**. [Mild] Study
- ▶ **Grapefruit** juice increases the exposure to **tolvaptan**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 708. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 708. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 708. [Moderate] Study
- ▶ **Letermovir** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 708. [Moderate] Study
- ▶ **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. [Moderate] Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 708. [Severe] Study
- ▶ **Macrolides** (**erythromycin**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 708. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **Neurokinin-1 receptor antagonists** (**aprepitant**, **netupitant**) are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 708. [Moderate] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 708. [Moderate] Study
- ▶ **Quinolones** (**ciprofloxacin**) are predicted to increase the exposure to **tolvaptan**. Use with caution and adjust **tolvaptan** dose, p. 708. [Moderate] Theoretical
- ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **tolvaptan**. Avoid. [Moderate] Theoretical

**Topiramate** → see antiepileptics

**Topotecan** → see TABLE 15 p. 1432 (myelosuppression)

- ▶ **Anti-androgens** (**darolutamide**) are predicted to increase the exposure to **topotecan**. Avoid. [Severe] Theoretical
- ▶ **Antiarrhythmics** (**amiodarone**, **dronedaron**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Antiepileptics** (**fosphenytoin**, **phenytoin**) increase the clearance of **topotecan**. [Moderate] Study
- ▶ **Antifungals**, azoles (**isavuconazole**) are predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
- ▶ **Antifungals**, azoles (**itraconazole**, **ketoconazole**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Calcium channel blockers** (**verapamil**) are predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Certitinib** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical → Also see TABLE 15 p. 1432
- ▶ **Ciclosporin** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. [Moderate] Study
- ▶ **HIV-protease inhibitors** (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the exposure to **topotecan**. [Severe] Study

## Topotecan (continued)

- ▶ **Lapatinib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Leflunomide** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1432
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Macrolides** are predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Mirabegron** is predicted to increase the exposure to **topotecan**. [\[Mild\]](#) Theoretical
- ▶ **Paritaprevir** (with ritonavir and ombitasvir) is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study
- ▶ **Pibrentasvir** (with glecaprevir) is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study
- ▶ **Pitolisant** is predicted to decrease the exposure to **topotecan**. [\[Mild\]](#) Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Regorafenib** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study → Also see [TABLE 15](#) p. 1432
- ▶ **St John's wort** is predicted to decrease the exposure to **topotecan**. [\[Severe\]](#) Theoretical
- ▶ **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. [\[Moderate\]](#) Study
- ▶ **Teriflunomide** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [\[Severe\]](#) Study
- ▶ **Venetoclax** is predicted to increase the exposure to **topotecan**. [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. [\[Severe\]](#) Theoretical

**Torsemide** → see loop diuretics

**Toremifene** → see [TABLE 5](#) p. 1430 (thromboembolism), [TABLE 9](#) p. 1431 (QT-interval prolongation)

- ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **toremifene**. Adjust dose. [\[Moderate\]](#) Study → Also see [TABLE 9](#) p. 1431
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **toremifene**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical → Also see [TABLE 9](#) p. 1431
- ▶ **Cobicistat** is predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical
- ▶ **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical → Also see [TABLE 9](#) p. 1431
- ▶ **Idelalisib** is predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **toremifene**. [\[Moderate\]](#) Theoretical → Also see [TABLE 9](#) p. 1431
- ▶ **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to **toremifene**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. [\[Severe\]](#) Theoretical

**Trabectedin** → see [TABLE 1](#) p. 1429 (hepatotoxicity), [TABLE 15](#) p. 1432 (myelosuppression)

- ▶ **Anti-androgens** (**apalutamide**, **enzalutamide**) are predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Antiepileptics** (**carbamazepine**, **fosphenytoin**, **phenobarbital**, **phenytoin**, **primidone**) are predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical → Also see [TABLE 1](#) p. 1429

- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical → Also see [TABLE 1](#) p. 1429
- ▶ **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. Public Health England advises avoid (refer to Green Book). [\[Severe\]](#) Theoretical
- ▶ **Macrolides** (**clarithromycin**) are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. [\[Severe\]](#) Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical → Also see [TABLE 15](#) p. 1432
- ▶ **Rifamycins** (**rifampicin**) are predicted to decrease the exposure to **trabectedin**. Avoid. [\[Severe\]](#) Theoretical

**Tramadol** → see opioids

**Trametinib**

- ▶ **Antiarrhythmics** (**amiodarone**, **dronedarone**) are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**) are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers** (**verapamil**) are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
- ▶ **Ciclosporin** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** (**lopinavir**, **ritonavir**, **saquinavir**) are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
- ▶ **Lapatinib** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides** are predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
- ▶ **Ranolazine** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical
- ▶ **Vemurafenib** is predicted to increase the concentration of **trametinib**. [\[Moderate\]](#) Theoretical

**Trandolapril** → see ACE inhibitors

**Tranexamic acid** → see [TABLE 5](#) p. 1430 (thromboembolism)

**Tranylcypromine** → see MAOIs, irreversible

**Trastuzumab** → see monoclonal antibodies

**Trastuzumab emtansine** → see monoclonal antibodies

**Trazodone** → see [TABLE 13](#) p. 1432 (serotonin syndrome), [TABLE 11](#) p. 1431 (CNS depressant effects)

- ▶ **Antiarrhythmics** (**dronedarone**) are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Antiepileptics** (**carbamazepine**) decrease the concentration of **trazodone**. Adjust dose. [\[Moderate\]](#) Anecdotal
- ▶ **Antifungals, azoles** (**fluconazole**, **isavuconazole**, **posaconazole**) are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Antifungals, azoles** (**itraconazole**, **ketoconazole**, **voriconazole**) are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Calcium channel blockers** (**diltiazem**, **verapamil**) are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Crizotinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **HIV-protease inhibitors** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Imatinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical

- ▶ **Macrolides (clarithromycin)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **trazodone**. [\[Moderate\]](#) Theoretical

#### Tree pollen extract

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

**Treosulfan** → see alkylating agents

**Tretinoin** → see retinoids

**Triamcinolone** → see corticosteroids

**Triamterene** → see potassium-sparing diuretics

**Tricyclic antidepressants** → see TABLE 18 p. 1433 (hyponatraemia), TABLE 8 p. 1430 (hypotension), TABLE 13 p. 1432 (serotonin syndrome), TABLE 9 p. 1431 (QT-interval prolongation), TABLE 11 p. 1431 (CNS depressant effects), TABLE 10 p. 1431 (antimuscarinics)

amitriptyline · clomipramine · dosulepin · doxepin · imipramine · lofepramine · nortriptyline · trimipramine

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions of topical **doxepin** should be borne in mind.

- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **tricyclic antidepressants**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antiarrhythmics (propafenone)** are predicted to increase the concentration of **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical → Also see TABLE 10 p. 1431
- ▶ **Antiepileptics (carbamazepine)** decrease the exposure to **tricyclic antidepressants**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 18 p. 1433
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1431
- ▶ **Antiepileptics (valproate)** increase the concentration of **nortriptyline**. [\[Severe\]](#) Study
- ▶ **Tricyclic antidepressants (clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with **antiepileptics (zonisamide)**. Avoid in children. [\[Severe\]](#) Theoretical
- ▶ **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study → Also see TABLE 13 p. 1432
- ▶ **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study
- ▶ **Tricyclic antidepressants** decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. [\[Moderate\]](#) Anecdotal → Also see TABLE 8 p. 1430 → Also see TABLE 11 p. 1431
- ▶ **Cobicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. [\[Mild\]](#) Study
- ▶ **Dacomitinib** is predicted to markedly increase the exposure to **tricyclic antidepressants (imipramine, nortriptyline)**. Avoid. [\[Severe\]](#) Study
- ▶ **Darifenacin** is predicted to increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical → Also see TABLE 10 p. 1431
- ▶ **Eliglustat** is predicted to increase the exposure to **nortriptyline**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors (ritonavir, tipranavir)** are predicted to increase the exposure to **tricyclic antidepressants**. [\[Moderate\]](#) Theoretical
- ▶ **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see TABLE 13 p. 1432 → Also see TABLE 9 p. 1431
- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversibly**. Avoid and for 14 days after stopping the MAOI. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1430 → Also see TABLE 13 p. 1432
- ▶ **Amitriptyline** decreases the effects of **metypapone**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. [\[Severe\]](#) Theoretical → Also see TABLE 13 p. 1432
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1430 → Also see TABLE 11 p. 1431
- ▶ **Tricyclic antidepressants** potentially increase the risk of adverse effects when given with **ozanimod**. [\[Severe\]](#) Theoretical
- ▶ **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. [\[Mild\]](#) Theoretical
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study → Also see TABLE 18 p. 1433 → Also see TABLE 13 p. 1432
- ▶ **SSRIs (fluvoxamine)** markedly increase the exposure to **clomipramine**. Adjust dose. [\[Severe\]](#) Study → Also see TABLE 18 p. 1433 → Also see TABLE 13 p. 1432
- ▶ **SSRIs (fluvoxamine)** increase the exposure to **tricyclic antidepressants (amitriptyline, imipramine)**. Adjust dose. [\[Severe\]](#) Study → Also see TABLE 18 p. 1433 → Also see TABLE 13 p. 1432
- ▶ **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. [\[Moderate\]](#) Study
- ▶ **Tricyclic antidepressants** increase the effects of **sympathomimetics, vasoconstrictor (adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine)**. Avoid. [\[Severe\]](#) Study
- ▶ **Tricyclic antidepressants** are predicted to decrease the effects of **sympathomimetics, vasoconstrictor (ephedrine)**. Avoid. [\[Severe\]](#) Study
- ▶ **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. [\[Severe\]](#) Study
- ▶ **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. [\[Moderate\]](#) Study → Also see TABLE 8 p. 1430 → Also see TABLE 11 p. 1431

#### Trintene

▶ Oral **trintene** potentially decreases the absorption of oral **iron**.

[\[Moderate\]](#) Theoretical

▶ **Trintene** potentially decreases the absorption of **zinc**.

[\[Moderate\]](#) Theoretical

**Trifluoperazine** → see phenothiazines

**Trihexyphenidyl** → see TABLE 10 p. 1431 (antimuscarinics)

**Trimethoprim** → see TABLE 18 p. 1433 (hyponatraemia), TABLE 2 p. 1429 (nephrotoxicity), TABLE 16 p. 1433 (increased serum potassium)

- ▶ **Trimethoprim** increases the concentration of **antiepileptics (fosphenytoin, phenytoin)**. [\[Moderate\]](#) Study
- ▶ **Antimalarials (pyrimethamine)** increase the risk of adverse effects when given with **trimethoprim**. [\[Severe\]](#) Study
- ▶ **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. [\[Severe\]](#) Study
- ▶ **Dapsone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. [\[Severe\]](#) Study
- ▶ **Trimethoprim** increases the concentration of **digoxin**. [\[Moderate\]](#) Study
- ▶ **Trimethoprim** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Trimethoprim** slightly increases the exposure to **meglitinides (repaglinide)**. Avoid or monitor blood glucose. [\[Moderate\]](#) Study
- ▶ **Trimethoprim** increases the risk of adverse effects when given with **methotrexate**. Avoid. [\[Severe\]](#) Anecdotal → Also see TABLE 2 p. 1429
- ▶ **Trimethoprim** slightly increases the exposure to **NRTIs (lamivudine)**. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** decrease the exposure to **trimethoprim**. [\[Moderate\]](#) Study
- ▶ **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. [\[Moderate\]](#) Theoretical

**Trimipramine** → see tricyclic antidepressants

**Triptans** → see TABLE 13 p. 1432 (serotonin syndrome)

almotriptan • eletriptan • frovatriptan • naratriptan • rizatriptan • sumatriptan • zolmitriptan

- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** increase the exposure to **almotriptan**. [Mild] Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Beta blockers, non-selective (propranolol)** slightly to moderately increase the exposure to **rizatriptan**. Adjust **rizatriptan** dose and separate administration by at least 2 hours, p. 501. [Moderate] Study
- ▶ **Cobicistat** increases the exposure to **almotriptan**. [Mild] Study
- ▶ **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Combined hormonal contraceptives** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 503. [Moderate] Theoretical
- ▶ **Almotriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after **almotriptan**. [Severe] Theoretical
- ▶ **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Study
- ▶ **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after **rizatriptan**. [Severe] Theoretical
- ▶ **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after **sumatriptan**. [Severe] Study
- ▶ Triptans (**frovatriptan**, **naratriptan**) are predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. [Severe] Theoretical
- ▶ **Zolmitriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. Ergotamine should be taken at least 24 hours before or 6 hours after **zolmitriptan**. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 503. [Mild] Study
- ▶ **HIV-protease inhibitors** increase the exposure to **almotriptan**. [Mild] Study
- ▶ **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Idelalisib** increases the exposure to **almotriptan**. [Mild] Study
- ▶ **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Macrolides (clarithromycin)** increase the exposure to **almotriptan**. [Mild] Study
- ▶ **Macrolides (clarithromycin)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. [Severe] Study
- ▶ **Macrolides (erythromycin)** moderately increase the exposure to **almotriptan**. Avoid. [Moderate] Study
- ▶ **MAOIs, irreversible** are predicted to increase the exposure to triptans (**rizatriptan**, **sumatriptan**). Avoid and for 14 days after stopping the MAOI. [Severe] Theoretical → Also see TABLE 13 p. 1432
- ▶ **MAOIs, irreversible** are predicted to increase the exposure to **zolmitriptan**. [Severe] Theoretical → Also see TABLE 13 p. 1432
- ▶ **Mexiletine** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 503. [Moderate] Theoretical
- ▶ **Moclobemide** moderately increases the exposure to triptans (**rizatriptan**, **sumatriptan**). Avoid. [Moderate] Study → Also see TABLE 13 p. 1432
- ▶ **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 503. [Moderate] Study → Also see TABLE 13 p. 1432
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **eletriptan**. [Moderate] Study

- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 503. [Moderate] Theoretical
- ▶ **SSRIs (fluvoxamine)** increase the concentration of **frovatriptan**. [Severe] Study → Also see TABLE 13 p. 1432
- ▶ **SSRIs (fluvoxamine)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 503. [Severe] Theoretical → Also see TABLE 13 p. 1432

**Tropicamide** → see TABLE 10 p. 1431 (antimuscarinics)

**Tropium** → see TABLE 10 p. 1431 (antimuscarinics)

**Tryptophan** → see TABLE 13 p. 1432 (serotonin syndrome)

- ▶ **Tryptophan** greatly decreases the concentration of **levodopa**. [Moderate] Study

- ▶ **Tryptophan** increases the risk of adverse effects when given with **MAOIs, irreversible**. [Severe] Anecdotal → Also see TABLE 13 p. 1432

**Typhoid vaccine, oral** → see live vaccines

#### Ulipristal

- ▶ **Anti-androgens (enzalutamide)** are predicted to markedly decrease the exposure to **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. [Severe] Theoretical
  - ▶ **Antiepileptics (carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
  - ▶ **Ulipristal** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. [Severe] Theoretical
  - ▶ **Ulipristal** is predicted to decrease the efficacy of **desogestrel**. Avoid. [Severe] Theoretical
  - ▶ **Endothelin receptor antagonists (bosentan)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
  - ▶ **Ulipristal** is predicted to decrease the efficacy of **etonogestrel**. Avoid. [Severe] Theoretical
  - ▶ **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
  - ▶ **HIV-protease inhibitors (lopinavir)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. [Severe] Study
  - ▶ **HIV-protease inhibitors (ritonavir)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
  - ▶ **Ulipristal** is predicted to decrease the efficacy of **levonorgestrel**. Avoid. [Severe] Theoretical
  - ▶ **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. [Severe] Theoretical
  - ▶ **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
  - ▶ **Neurokinin-1 receptor antagonists (aprepitant, fosaprepitant)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
  - ▶ **NNRTIs (efavirenz, nevirapine)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
  - ▶ **Ulipristal** is predicted to decrease the efficacy of **norethisterone**. Avoid. [Severe] Theoretical
  - ▶ **Rifamycins** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
  - ▶ **St John's wort** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 840. [Severe] Anecdotal
- Umeclidinium** → see TABLE 10 p. 1431 (antimuscarinics)
- Upadacitinib**
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
  - ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
  - ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study

- ▶ **Antifungals, azoles (posaconazole)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **upadacitinib**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. [Severe] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **upadacitinib**. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **upadacitinib**. [Moderate] Study

**Urokinase** → see TABLE 3 p. 1429 (anticoagulant effects)

#### Ursodeoxycholic acid

- ▶ Oral **antacids** are predicted to decrease the absorption of oral **ursodeoxycholic acid**. Separate administration by 2 hours. [Moderate] Theoretical
- ▶ **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. [Severe] Anecdotal
- ▶ **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. [Severe] Theoretical

**Ustekinumab** → see monoclonal antibodies

#### Vaborbactam

- ▶ **Vaborbactam** is predicted to increase the concentration of **beta lactamers, selective (metoprolol)**. [Unknown] Theoretical
- ▶ **Vaborbactam** is predicted to increase the concentration of **venlafaxine**. [Unknown] Theoretical

**Valaciclovir** → see TABLE 2 p. 1429 (nephrotoxicity)

- ▶ **Valaciclovir** is predicted to increase the exposure to **aminophylline**. [Severe] Anecdotal
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. [Moderate] Theoretical
- ▶ **Valaciclovir** is predicted to increase the exposure to **theophylline**. [Severe] Theoretical

**Valganciclovir** → see TABLE 15 p. 1432 (myelosuppression), TABLE 2 p. 1429 (nephrotoxicity)

- ▶ **Valganciclovir** is predicted to increase the risk of seizures when given with **carbamapenems (imipenem)**. Avoid. [Severe] Anecdotal
- ▶ **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. [Moderate] Theoretical

**Valproate** → see antiepileptics

**Valsartan** → see angiotensin-II receptor antagonists

**Vancomycin** → see TABLE 2 p. 1429 (nephrotoxicity), TABLE 19 p. 1433 (ototoxicity)

**Vandetanib** → see TABLE 9 p. 1431 (QT-interval prolongation)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ **Vandetanib** is predicted to increase the risk of bleeding events when given with **coumarins**. [Severe] Theoretical
- ▶ **Vandetanib** slightly increases the exposure to **digoxin**. Monitor ECG and adjust dose. [Moderate] Study
- ▶ **Vandetanib** is predicted to increase the exposure to **dopamine receptor agonists (pramipexole)**. Adjust dose. [Moderate] Study
- ▶ **Vandetanib** increases the exposure to **metformin**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study
- ▶ **Vandetanib** is predicted to increase the risk of bleeding events when given with **phenindione**. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vandetanib**. Avoid. [Moderate] Study

**Vardenafil** → see phosphodiesterase type-5 inhibitors

**Varicella-zoster immunoglobulin** → see immunoglobulins

**Varicella-zoster vaccine** → see live vaccines

**Vecuronium** → see neuromuscular blocking drugs, non-depolarising

**Vedolizumab** → see monoclonal antibodies

#### Velpatasvir

- ▶ **Velpatasvir** is predicted to increase the exposure to **aliskiren**. [Severe] Theoretical
- ▶ Oral **antacids** are predicted to decrease the concentration of oral **velpatasvir**. Separate administration by 4 hours. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Antiarrhythmics (amiodarone)** are predicted to increase the concentration of **velpatasvir**. Avoid or monitor. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Severe] Theoretical
- ▶ **Calcium salts (calcium carbonate)** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. [Moderate] Anecdotal
- ▶ **Velpatasvir** is predicted to increase the exposure to **colchicine**. [Severe] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **digoxin**. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **everolimus**. [Severe] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
- ▶ **H<sub>2</sub> receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 669. [Moderate] Study
- ▶ **HIV-protease inhibitors (tipranavir)** are predicted to increase the exposure to **velpatasvir**. [Severe] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **loperamide**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Modafinil** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Severe] Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 669. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **sirolimus**. [Severe] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. [Moderate] Theoretical
- ▶ **Velpatasvir** increases the exposure to **statins (rosuvastatin)**. Adjust rosuvastatin dose and monitor adverse effects, p. 218. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **statins (simvastatin)**. Monitor adverse effects and adjust dose. [Severe] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **taxanes (paclitaxel)**. [Severe] Theoretical
- ▶ **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. [Severe] Study
- ▶ **Velpatasvir** increases the exposure to **thrombin inhibitors (dabigatran)**. Avoid. [Severe] Study
- ▶ **Velpatasvir** is predicted to increase the exposure to **topotecan**. [Severe] Theoretical

**Vemurafenib** → see TABLE 9 p. 1431 (QT-interval prolongation)

- ▶ **Vemurafenib** is predicted to increase the exposure to **afatinib**. Separate administration by 12 hours. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **agomelatine**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Vemurafenib** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **beta blockers, non-selective (nadolol)**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1166. [Severe] Theoretical
- ▶ **Vemurafenib** slightly increases the exposure to **digoxin**. Use with caution and adjust dose. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **duloxetine**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **erlotinib**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to slightly increase the exposure to **factor XA inhibitors (edoxaban)**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. [Moderate] Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Idelalisib** is predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **larotrectinib**. [Mild] Theoretical
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **vemurafenib**. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Vemurafenib** is predicted to increase the exposure to **melatonin**. Use with caution or avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **naldemedine**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **nintedanib**. [Moderate] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Vemurafenib** is predicted to increase the exposure to **pibrentasvir**. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vemurafenib**. Avoid. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1052. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the exposure to **taxanes (paclitaxel)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **theophylline**. Use with caution or avoid. [Moderate] Theoretical

- ▶ **Vemurafenib** increases the exposure to **thrombin inhibitors (dabigatran)**. Use with caution and adjust dose. [Severe] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. [Severe] Study
- ▶ **Vemurafenib** moderately increases the exposure to **tizanidine**. Use with caution or avoid. [Moderate] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Vemurafenib** is predicted to increase the exposure to **topotecan**. [Severe] Study
- ▶ **Vemurafenib** is predicted to increase the concentration of **trametinib**. [Moderate] Theoretical
- ▶ **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical

## Venetoclax

**FOOD AND LIFESTYLE** Avoid Seville (bitter orange) and star fruit as they might increase the exposure to venetoclax.

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Antiarhythmics (amiodarone)** are predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Antiarhythmics (dronedaron)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **antihistamines, non-sedating (fexofenadine)**. [Moderate] Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Ciclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Venetoclax** slightly increases the exposure to **coumarins (warfarin)**. [Moderate] Study
- ▶ **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Venetoclax** increases the exposure to **digoxin**. Avoid or adjust dose. [Severe] Study
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **endothelin receptor antagonists (bosentan)**. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **Grapefruit** juice is predicted to increase the exposure to **venetoclax**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Letermovir** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **meglitinides (repaglinide)**. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study

- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Study
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Quinolones (ciprofloxacin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. [Severe] Theoretical
- ▶ **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. [Severe] Study
- ▶ **St John's wort** is predicted to decrease the exposure to **venetoclax**. Avoid. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **statins (atorvastatin)**. [Moderate] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **statins (fluvastatin, pravastatin, rosuvastatin, simvastatin)**. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **sulfasalazine**. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **sulfonylureas (glibenclamide)**. [Moderate] Theoretical
- ▶ **Venetoclax** is predicted to increase the exposure to **thrombin inhibitors (dabigatran)**. Avoid or adjust dose. [Severe] Study
- ▶ **Venetoclax** is predicted to increase the exposure to **topotecan**. [Moderate] Theoretical
- ▶ **Venurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. [Severe] Theoretical
- Venlafaxine** → see TABLE 13 p. 1432 (serotonin syndrome), TABLE 9 p. 1431 (QT-interval prolongation), TABLE 11 p. 1431 (CNS depressant effects), TABLE 4 p. 1429 (antipileptic effects)
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Cobicistat** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
- ▶ **H<sub>2</sub> receptor antagonists (cimetidine)** slightly increase the exposure to **venlafaxine**. [Mild] Study
- ▶ **Venlafaxine** slightly increases the exposure to **haloperidol**. [Severe] Study → Also see TABLE 9 p. 1431 → Also see TABLE 11 p. 1431
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Idelalisib** is predicted to increase the exposure to **venlafaxine**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **venlafaxine**. [Moderate] Study → Also see TABLE 9 p. 1431
- ▶ **Venlafaxine** is predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. [Mild] Theoretical
- ▶ **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine**. [Severe] Anecdotal
- ▶ **Vandebactam** is predicted to increase the concentration of **venlafaxine**. [Unknown] Theoretical
- Verapamil** → see calcium channel blockers
- Vernakalant** → see antiarrhythmics
- Verteporfin**

**GENERAL INFORMATION** Caution on concurrent use with other photosensitising drugs.

- Vigabatrin** → see antiepileptics
- Vilanterol** → see beta<sub>2</sub> agonists
- Vildagliptin** → see dipeptidylpeptidase-4 inhibitors
- Vinblastine** → see vinca alkaloids
- Vinca alkaloids** → see TABLE 1 p. 1429 (hepatotoxicity), TABLE 15 p. 1432 (myelosuppression), TABLE 19 p. 1433 (ototoxicity), TABLE 12 p. 1432 (peripheral neuropathy), TABLE 5 p. 1430 (thromboembolism), TABLE 9 p. 1431 (QT-interval prolongation)
- vinblastine • vincristine • vindesine • vinflunine • vinorelbine

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical
- ▶ **Antiarrhythmics (dronedaron)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 12 p. 1432
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 12 p. 1432
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 1 p. 1429 → Also see TABLE 12 p. 1432
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 1 p. 1429 → Also see TABLE 9 p. 1431
- ▶ **Antifungals, azoles (miconazole)** are predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. [Moderate] Theoretical
- ▶ **Asparaginase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before **asparaginase**. [Severe] Anecdotal → Also see TABLE 1 p. 1429 → Also see TABLE 15 p. 1432
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Cobicistat** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Crisantaspase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before **crisantaspase**. [Severe] Anecdotal → Also see TABLE 1 p. 1429 → Also see TABLE 15 p. 1432
- ▶ **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1432
- ▶ **Letermovir** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. Public Health England advises avoid (refer to Green Book). [Severe] Theoretical
- ▶ **Macrolides (clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 9 p. 1431
- ▶ **Mitotane** is predicted to decrease the exposure to **vinca alkaloids (vinblastine, vincristine, vindesine)**. [Severe] Theoretical → Also see TABLE 15 p. 1432
- ▶ **Mitotane** is predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical → Also see TABLE 15 p. 1432
- ▶ **Mitotane** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical → Also see TABLE 15 p. 1432
- ▶ **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical
- ▶ **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. [Severe] Theoretical → Also see TABLE 15 p. 1432 → Also see TABLE 9 p. 1431
- ▶ **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vincristine**. Vincristine should be taken 3 to 24 hours before **pegaspargase**. [Severe] Anecdotal → Also see TABLE 1 p. 1429 → Also see TABLE 15 p. 1432

## Vinca alkaloids (continued)

- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vinflunine**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to vinca alkaloids (**vinblastine**, **vincristine**, **vindesine**). [Severe] Theoretical

**Vincristine** → see vinca alkaloids

**Vindesine** → see vinca alkaloids

**Vinflunine** → see vinca alkaloids

**Vinorelbine** → see vinca alkaloids

## Vismodegib

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Mitotane** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical
- ▶ **St John's wort** is predicted to decrease the exposure to **vismodegib**. Avoid. [Moderate] Theoretical

## Vitamin A

- ▶ **Retinoids (acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Theoretical
- ▶ **Retinoids (bexarotene)** are predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. [Moderate] Theoretical
- ▶ **Retinoids (tretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. [Severe] Study

## Vitamin D substances

alfacalcidol · calcipotriol · calcitriol · colecalciferol · dihydrotachysterol · ergocalciferol · paricalcitol · tacalcitol

**ROUTE-SPECIFIC INFORMATION** Since systemic absorption can follow topical application, the possibility of interactions with topical **calcitriol** should be borne in mind.

- ▶ **Antiepileptics (carbamazepine)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ **Antiepileptics (fosphenytoin, phenytoin)** decrease the effects of **vitamin D substances**. [Moderate] Study
- ▶ **Antiepileptics (phenobarbital, primidone)** are predicted to decrease the effects of **vitamin D substances**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (clotrimazole, ketoconazole)** are predicted to decrease the exposure to **colecalfiferol**. [Moderate] Theoretical
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Cobicistat** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. [Severe] Theoretical
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Idelalisib** is predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **paricalcitol**. [Moderate] Study
- ▶ **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. [Moderate] Theoretical

## Vitamin E substances

- ▶ **Vitamin E substances** affect the exposure to **ciclosporin**. [Moderate] Study

## Volanesorsen

- ▶ **Volanesorsen** potentially increases the risk of bleeding events when given with **drugs with anticoagulant effects** (see TABLE 3 p. 1429). Avoid depending on platelet count—consult product literature. [Severe] Theoretical

- ▶ **Volanesorsen** potentially increases the risk of bleeding events when given with **drugs with antiplatelet effects** (see TABLE 4 p. 1429). Avoid depending on platelet count—consult product literature. [Severe] Theoretical

**Volatile halogenated anaesthetics** → see TABLE 8 p. 1430 (hypotension), TABLE 9 p. 1431 (QT-interval prolongation), TABLE 11 p. 1431 (CNS depressant effects)

desflurane · isoflurane · methoxyflurane · sevoflurane

- ▶ **Antiepileptics (phenobarbital, primidone)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical → Also see TABLE 11 p. 1431
- ▶ **Isoniazid** potentially increases the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical
- ▶ **Rifamycins (rifampicin)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. [Severe] Theoretical

**Voriconazole** → see antifungals, azoles

**Vortioxetine** → see TABLE 13 p. 1432 (serotonin syndrome), TABLE 4 p. 1429 (antiplatelet effects)

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1432
- ▶ **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study
- ▶ **SSRIs (fluoxetine, paroxetine)** are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study → Also see TABLE 13 p. 1432 → Also see TABLE 4 p. 1429
- ▶ **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. [Moderate] Study

## Voxilaprevir

- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Antiepileptics (oxcarbazepine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Ciclosporin** increases the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **voxilaprevir** (with sofosbuvir and velpatasvir). Avoid. [Severe] Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. [Severe] Theoretical
- ▶ **Endothelin receptor antagonists (bosentan)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the concentration of **factor Xa inhibitors (edoxaban)**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (atazanavir)** boosted with ritonavir increase the concentration of **voxilaprevir**. Avoid. [Severe] Study
- ▶ **HIV-protease inhibitors (lopinavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. Avoid. [Severe] Theoretical
- ▶ **HIV-protease inhibitors (tipranavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. [Severe] Theoretical
- ▶ **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [Severe] Study

- ▶ **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **NNRTIs (efavirenz, nevirapine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 669. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifabutin)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Study
- ▶ **St John's wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to **statins (atorvastatin)**. Adjust atorvastatin dose, p. 217. [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) is predicted to increase the exposure to **statins (fluvastatin, simvastatin)**. Avoid. [\[Moderate\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) moderately increases the exposure to **statins (pravastatin)**. Monitor and adjust pravastatin dose. [\[Moderate\]](#) Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) markedly increases the exposure to **statins (rosuvastatin)**. Avoid. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine**. Avoid. [\[Severe\]](#) Theoretical
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) potentially increases the concentration of **tenofovir disoproxil**. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** (with sofosbuvir and velpatasvir) increases the concentration of **thrombin inhibitors (dabigatran)**. Avoid. [\[Severe\]](#) Study
- ▶ **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. [\[Severe\]](#) Theoretical

**Warfarin** → see coumarins

**Wasp venom extract**

**GENERAL INFORMATION** Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

**Xipamide** → see thiazide diuretics

**Xylometazoline** → see sympathomimetics, vasoconstrictor

**Yellow fever vaccine, live** → see live vaccines

**Zidovudine** → see NRTIs

## Zinc

**ROUTE-SPECIFIC INFORMATION** Interactions do not generally apply to topical use unless specified.

- ▶ Oral zinc decreases the absorption of oral **bisphosphonates (alendronate)**. Alendronate should be taken at least 30 minutes before zinc. [\[Moderate\]](#) Study
- ▶ Oral zinc decreases the absorption of oral **bisphosphonates (clodronate)**. Avoid zinc for 2 hours before or 1 hour after clodronate. [\[Moderate\]](#) Study
- ▶ Oral zinc is predicted to decrease the absorption of oral **bisphosphonates (ibandronate)**. Avoid zinc for at least 6 hours before or 1 hour after ibandronate. [\[Moderate\]](#) Theoretical
- ▶ Oral zinc decreases the absorption of oral **bisphosphonates (risedronate)**. Separate administration by at least 2 hours. [\[Moderate\]](#) Study
- ▶ Oral **calcium salts** decrease the absorption of **zinc**. [\[Moderate\]](#) Study
- ▶ Oral zinc is predicted to decrease the absorption of **eltrombopag**. Eltrombopag should be taken 2 hours before or 4 hours after zinc. [\[Severe\]](#) Theoretical
- ▶ Oral zinc is predicted to decrease the efficacy of oral **iron** and oral **iron** is predicted to decrease the efficacy of oral **zinc**. [\[Moderate\]](#) Study
- ▶ Oral zinc is predicted to decrease the absorption of oral **iron chelators (deferiprone)**. [\[Moderate\]](#) Theoretical
- ▶ Zinc is predicted to decrease the absorption of **penicillamine**. [\[Mild\]](#) Theoretical
- ▶ Zinc is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. [\[Moderate\]](#) Study
- ▶ Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. [\[Moderate\]](#) Theoretical
- ▶ **Trientine** potentially decreases the absorption of **zinc**. [\[Moderate\]](#) Theoretical
- Zoledronate** → see bisphosphonates
- Zolmitriptan** → see triptans
- Zolpidem** → see TABLE 11 p. 1431 (CNS depressant effects)
- ▶ **Antiepileptics (carbamazepine)** moderately decrease the exposure to **zolpidem**. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** moderately decrease the exposure to **zolpidem**. [\[Moderate\]](#) Study
- Zonisamide** → see antiepileptics
- Zopiclone** → see TABLE 11 p. 1431 (CNS depressant effects)
- ▶ **Anti-androgens (apalutamide, enzalutamide)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiarrhythmics (dronedarone)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Antiepileptics (carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study → Also see TABLE 11 p. 1431
- ▶ **Antifungals, azoles (fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Antifungals, azoles (itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Calcium channel blockers (diltiazem, verapamil)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **HIV-protease inhibitors** are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Letermovir** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Macrolides (clarithromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Theoretical
- ▶ **Macrolides (erythromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Mitotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Neurokinin-1 receptor antagonists (aprepitant, netupitant)** are predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- ▶ **Rifamycins (rifampicin)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. [\[Moderate\]](#) Study
- Zuclopenthixol** → see TABLE 8 p. 1430 (hypotension), TABLE 9 p. 1431 (QT-interval prolongation), TABLE 11 p. 1431 (CNS depressant effects)
- ▶ **Zuclopenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. [\[Moderate\]](#) Theoretical → Also see TABLE 8 p. 1430 → Also see TABLE 9 p. 1431
- ▶ **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. [\[Severe\]](#) Theoretical → Also see TABLE 8 p. 1430
- ▶ **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. [\[Severe\]](#) Anecdotal → Also see TABLE 9 p. 1431

# Appendix 2

## Borderline substances

### CONTENTS

<b>Enteral feeds (non-disease specific)</b>	page 1624
Enteral feeds (non-disease specific): less than 5 g protein/100 mL	1624
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL	1625
<b>Nutritional supplements (non-disease specific)</b>	1629
Nutritional supplements: less than 5 g protein/100 mL	1629
Nutritional supplements: 5 g (or more) protein/100 mL	1630
<b>Specialised formulas</b>	1636
Specialised formulas for specific clinical conditions	1636
<b>Feed supplements</b>	1639
High-energy supplements	1639
Fibre, vitamin, and mineral supplements	1643
<b>Feed additives</b>	1644
Special additives for conditions of intolerance	1644

Feed thickeners and pre-thickened drinks	page 1644
Flavouring preparations	1644
<b>Foods for special diets</b>	1645
Gluten-free foods	1645
Low-protein foods	1647
<b>Nutritional supplements for metabolic diseases</b>	1650
Glutaric aciduria (type 1)	1650
Glycogen storage disease	1650
Homocystinuria or hypermethioninaemia	1650
Maple syrup urine disease	1650
Methylmalonic or propionic acidemia	1651
Other inborn errors of metabolism	1651
Phenylketonuria	1652
Tyrosinaemia	1654

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee's advice and endorsed 'ACBS' will normally not be investigated.

### Information

General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

### Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)

All the food products listed in this appendix have ACBS approval. Some products may not be approved in all three countries. The clinical condition for which the product has been approved is included with each entry.

**Note** Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

### Enteral feeds and supplements

For most enteral feeds and nutritional supplements, the main source of **carbohydrate** is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as 'clinically lactose-free' or 'lactose-free' by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of **protein** or **amino acids** are included with each product entry. The **fat** or **oil** content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish sources, this information is included in the relevant table, below. The presence of medium chain triglycerides (MCT) is also noted where the quantity exceeds 30% of the fat content.

Enteral feeds and nutritional supplements can contain varying amounts of **vitamins**, **minerals**, and **trace elements**—the manufacturer's product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin. The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers.

**Note** Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

### Nutritional values

Nutritional values of products vary with flavour and pack size—consult product literature.

### Other conditions for which ACBS products can be prescribed

This is a list of clinical conditions for which the ACBS has approved toilet preparations.

#### Dermatitis, Eczema and Pruritus

*Aveeno*® Cream; *Aveeno*® Lotion; *E45*® Emollient Bath Oil; *E45*® Emollient Wash Cream

#### Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)

*Covermark*® classic foundation and finishing powder; *Dermacolor*® Camouflage cream and fixing powder; *Keromask*® finishing powder and masking cream; *Veil*® Cover cream and Finishing Powder. (Cleansing Creams, Cleansing Milks, and Cleansing Lotions are excluded).

#### Disinfectants (antiseptics)

May be prescribed on an FP10 only when ordered in such quantities and with such directions as are appropriate for the treatment of patients, but not if ordered for general hygienic purposes.

#### Dry mouth (xerostomia)

For patients suffering from dry mouth as a result of having (or having undergone) radiotherapy, or sicca syndrome. *AS Saliva Orthana*®, *Biotène Oralbalance*®, *Glandosane*®, *Saliveze*®

#### Photodermatoses (skin protection in)

*LA Roche-Posay Anthelios*® XL SPF 50+ cream; *Sunsense*® Ultra (Ego) SPF 50+; *Uvistat*® Lipscreen SPF 50, *Uvistat*® Suncream SPF 30 and 50

**Standard ACBS indications:** Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease, following total gastrectomy, short-bowel syndrome, bowel fistula

**Table 1 Enteral feeds (non-disease specific)**

Less than 5 g protein/100 mL

**Enteral feeds: 1 kcal/mL and less than 5 g protein/100 mL**

Not suitable for use in child under 3 years unless otherwise stated; not recommended for use in children unless otherwise stated

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1500 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13 g (sugars 0.9 g)	3.4 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623 except bowel fistula and pre-operative preparation of malnourished patients.	Fresubin 1500 Complete liquid: 1.5 litre = £15.00
Fresubin® Original (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g cows' milk soya	13.8 g (sugars 3.5 g)	3.4 g	Nil	Gluten-free Residual lactose Contains fish gelatin Feed in flexible pack contains fish oil and fish gelatin	Borderline substances standard ACBS indications p. 1623	Fresubin Original drink: blackcurrant, chocolate, nut, peach, vanilla 200ml = £2.43; Fresubin Original tube feed liquid: 500 ml = £4.70; 1000 ml = £9.33; 1500 ml = £13.99
Fresubin® Original Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g milk, soya proteins	13.0 g (sugars 0.9 g)	3.4 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623 except bowel fistula and pre-operative preparation of malnourished patients.	Fresubin Original Fibre liquid: 500 ml = £5.33; 1000 ml = £10.64
Jevity® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	449 kJ (107 kcal)	4 g caseinates	14.1 g (sugars 0.25 g)	3.47 g	1.76 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623 except bowel fistula.	Jevity liquid: 500 ml = £5.98; 1000 ml = £11.28; 1500 ml = £16.89
Nutrison® (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g cow's milk, pea, soya, whey proteins	12.3 g (sugars 0.7 g)	3.9 g	Trace	Contains fish oil, residual lactose, soya. Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1623.	Nutrison liquid: 500 ml = £5.55; 1000 ml = £9.75; 1500 ml = £14.63
Nutrison® Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	430 kJ (103 kcal)	4 g caseinate, pea, soya, whey proteins	12.3 g (sugars 0.8 g)	3.9 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623.	Nutrison Multi Fibre liquid: 500 ml = £6.00; 1000 ml = £11.30; 1500 ml = £16.92
Osmolite® (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	424 kJ (101 kcal)	4 g caseinates, soya protein isolate	13.6 g (sugars 0.6 g)	3.4 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623.	Osmolite liquid: 500 ml = £5.54; 1000 ml = £9.73; 1500 ml = £14.60

<b>SOYA PROTEIN FORMULA</b> Not suitable for use in child under 3 years unless otherwise stated; not recommended for child under 6 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Soya Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	3.8 g soya protein	12.1 g (sugars 4.1 g)	3.6 g	2 g	Contains fish oil, soya. Gluten-free. Lactose-free	Borderline substances standard ACBS indications p. 1623 except dysphagia. Also cows' milk protein intolerance, lactose intolerance.	Fresubin Soya Fibre liquid: 500 ml = £5.51
Nutrison® Soya (Nutricia Ltd)	Liquid (tube feed) per 100 mL	420 kJ (100 kcal)	4 g soya protein isolate	12.3 g (sugars 1 g)	3.9 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623; also cow's milk protein and lactose intolerance.	Nutrison Soya liquid: 500 ml = £5.99; 1000 ml = £12.01
Nutrison® Soya Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	430 kJ (103 kcal)	4 g soya protein	12.3 g (sugars 0.7 g)	3.9 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623; also cows' milk protein and lactose intolerance.	Nutrison Soya Multi Fibre liquid: 1.5 litre = £19.97
<b>PEPTIDE-BASED FORMULA</b> Not suitable for use in child under 3 years unless otherwise stated; not recommended for child under 6 years									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutrison® Peptisorb (Nutricia Ltd)	Liquid (tube feed) per 100 mL	425 kJ (100 kcal)	4 g whey protein hydrolysate	17.6 g (sugars 1.7 g)	1.7 g (MCT 47 %)	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623; also growth failure.	Nutrison Peptisorb liquid: 500 ml = £8.74; 1000 ml = £15.76
Peptamen® (Nestle Health Science)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	4 g whey peptides	12.7 g (sugars 480 mg)	3.7 g (MCT 70 %)	Nil	Gluten-free Residual lactose	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula	Peptamen liquid: unflavoured 500 ml = £7.52; 1000 ml = £14.12; vanilla 800 ml = £13.38
Survimed® OPD (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	420 kJ (100 kcal)	4.5-4.7 g whey protein hydrolysate	14.1-14.3 g (sugars 1.1-5 g)	2.8 g (MCT 48-51%)	less than or equal to 0.1 g	Contains fish oil (tube feed only), residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1623; also growth failure.	Survimed OPD liquid: 500 ml = £7.86; 800 ml = £13.56; 1000 ml = £15.72
Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL									
<b>Enteral feeds: 1.5 kcal/mL and 5 g (or more) protein/100 mL</b> Not suitable for use in child under 3 years unless otherwise stated; not recommended for use in children unless otherwise stated									
Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 2250 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk, soya proteins	18 g (sugars 1.2 g)	5.8 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623	Fresubin 2250 Complete liquid: 1.5 litre = £16.75
Fresubin® Energy (Fresenius Kabi Ltd)	Liquid (sip or tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk, whey proteins	18.8 g (sugars 1.1-6.3)	5.8 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623.	Fresubin Energy liquid unflavoured: 200 ml = £1.40; 500 ml = £6.27; 1000 ml = £11.80; 1500 ml = £16.99
Fresubin® Energy Fibre Tube Feed (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	5.6 g milk, soya proteins	18 g (sugars 1.2 g)	5.8 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623.	Fresubin Energy Fibre liquid unflavoured: 500 ml = £6.97; 1000 ml = £13.14; 1500 ml = £15.68
Fresubin® HP Energy (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g milk protein	17 g (sugars 1 g)	5.8 g (MCT 57 %)	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623; also CAPD and haemodialysis.	Fresubin HP Energy liquid: 500 ml = £6.45; 1000 ml = £12.16

## Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL (product list continued)

**Enteral feeds: 1.5 kcal/mL and 5 g (or more) protein/100 mL**

Not suitable for use in child under 3 years unless otherwise stated; not recommended for use in children unless otherwise stated

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® HP Energy Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g milk protein	16.2 g (sugars 1.11 g)	5.8 g (MCT 57%)	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623 except dysphagia. Also CAPD and haemodialysis.	Fresubin HP Energy Fibre liquid: 500 ml = £7.18; 1000 ml = £13.63
Jevity® 1.5kcal (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	649 kJ (154 kcal)	6.38 g caseinates, soya protein isolate	20.1 g (sugars 1.3 g)	4.9 g	2.2 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623.	Jevity 1.5kcal liquid: 500 ml = £7.16; 1000 ml = £13.50; 1500 ml = £20.83
Nutrison® Energy (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	6 g caseinate, pea, soya, whey proteins	18.3 g (sugars 1.1 g)	5.8 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623	Nutrison Energy liquid: 500 ml = £6.47; 1000 ml = £12.17; 1500 ml = £18.21
Nutrison® Energy Multi Fibre (Nutricia Ltd)	Liquid (tube feed) per 100 mL	640 kJ (153 kcal)	6 g caseinates, pea, soya, whey proteins	18.4 g (sugars 2.4 g)	5.8 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623.	Nutrison Energy Multi Fibre liquid: 500 ml = £7.18; 1000 ml = £13.51; 1500 ml = £20.86
Nutrison® Peptisorb Plus HEHP (Nutricia Ltd)	Liquid (tube feed) per 100 ml	631 kJ (150 kcal)	7.5 g whey protein hydrolysate	18.7 g (sugars 1.4 g)	5 g (MCT 60%)	Less than 0.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623 except dysphagia.	Nutrison Peptisorb Plus HEHP liquid: 500 ml = £8.93; 1000 ml = £16.81
Nutrison® Protein Plus Energy (Nutricia Ltd)	Liquid (tube feed) per 100 mL	630 kJ (150 kcal)	7.5 g caseinates, pea, soya, whey proteins	16.9 g (sugars 3.3)	5.8 g	Less than 0.1 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623.	Nutrison Protein Plus Energy liquid: 500 ml = £6.47; 1000 ml = £12.18
Osmolite® 1.5kcal (Abbott Laboratories Ltd)	Liquid (tube feed) per 100 mL	634 kJ (151 kcal)	6.3 g caseinates, soya protein isolate	20.4 g (sugars 1.2 g)	4.9 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1623; also continuous ambulatory peritoneal dialysis (CAPD), and haemodialysis.	Osmolite 1.5kcal tube feed liquid: 500 ml = £6.44; 1000 ml = £12.15; 1500 ml = £18.18
Vital 1.5 kcal (Abbott Laboratories Ltd)	Liquid (sip or tube feed) per 100 mL	631 kJ (150 kcal)	6.75 g caseinate whey protein hydrolysate	18.4 g (sugars 3.6 g)	5.5 g (MCT 64%)	Nil	Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1623; except proven inflammatory bowel disease and following total gastrectomy; not recommended for use in children	Vital 1.5kcal liquid vanilla: 200 ml = £3.37; 1000 ml = £17.26

<b>Enteral feeds: Less than 1.5 kcal/mL and 5 g (or more) protein/100 mL</b>

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Forticare® (Nutricia Ltd)	Liquid (sip feed) per 100 mL	685 kJ (163 kcal)	8.8 g milk protein	19.1 g (sugars 13.6 g)	5.3 g	2.1 g	Contains fish oil, residual lactose, soya. Electrolytes/100 mL: Na <sup>+</sup> 4.8 mmol K <sup>+</sup> 5.5 mmol Ca <sup>2+</sup> 4.2 mmol P <sup>3-</sup> 3.9 mmol Gluten-free	Patients with pancreatic cancer and patients with lung cancer undergoing chemotherapy.	Forticare liquid: cappuccino, orange & lemon, peach & ginger 500 ml = £10.04
Galactomin 17® (Nutricia Ltd)	Standard dilution (12.8 % w/v) of powder per 100 mL	275 kJ (66 kcal)	1.3 g caseinates	7.3 g (sugars 1.1 g)	3.5 g	Nil	Contains fish oil, residual lactose, soya. Electrolytes/100 mL: Na <sup>+</sup> 0.75 mmol K <sup>+</sup> 1.7 mmol Ca <sup>2+</sup> 1.4 mmol P <sup>3-</sup> 0.9 mmol	Proven lactose intolerance in pre-school children, galactosaemia, and galactokinase deficiency.	Galactomin 17 powder: 400 gram = £19.28
Powder provides: protein 10.3 g, carbohydrate 57.1 g, fat 27.3 g, energy 2150 kJ (514 kcal)/100 g									
KetoCal® 4:1 (Nutricia Ltd)	Standard dilution (14.2 % w/v) of powder per 100 mL	411 kJ (100 kcal)	2 g casein, protein equivalent (amino acids), whey protein	0.41 g (sugars 0.14 g)	9.8 g	0.75 g	Contains residual lactose, soya. Electrolytes/100 mL: Na <sup>+</sup> 3.3 mmol K <sup>+</sup> 3.1 mmol Ca <sup>2+</sup> 2.7 mmol P <sup>3-</sup> 2.1 mmol	For use as part of the ketogenic diet in the management of epilepsy resistant to drug therapy. Only to be prescribed on the advice of a secondary care physician with experience of the ketogenic diet.	KetoCal 4:1 powder: unflavoured, vanilla 300 gram = £34.99
Powder provides: protein 14.4 g, carbohydrate 2.9 g, fat 69.2 g, energy 2897 kJ (703 kcal)/100 g									
KetoCal® 4:1 LQ (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	620 kJ (150 kcal)	3.1 g caseinates, whey protein	0.6 g (sugars 0.4 g)	14.8 g	1.1 g	Contains residual lactose, soya. Electrolytes/100 mL: Na <sup>+</sup> 4.9 mmol K <sup>+</sup> 4.7 mmol Ca <sup>2+</sup> 2.4 mmol P <sup>3-</sup> 3.1 mmol	Drug resistant epilepsy or other conditions for which a ketogenic diet is indicated.	KetoCal 4:1 LQ liquid: unflavoured, vanilla 200 ml = £4.98
KetoClassic 3:1 Meal (KetoCare Foods Ltd)	Semi-solid per 100 g	936-1182 kJ (224-287 kcal)	5.1-5.2 g	2-3.7 g (sugars 0.8-2.6 g)	21.7-26.7 g	0.4-2.1 g	Contains egg and mustard (bolognese flavour), lactose (chicken flavour), and meat	Intractable epilepsy, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency and other conditions where a ketogenic diet is indicated.	KetoClassic 3:1 Meal: bolognese 126 g pouches 14 pouch = £76.02; chicken 135 g pouches 14 pouch = £76.95; 30 pouch = £162.90
KetoClassic® 3:1 Bar (KetoCare Foods Ltd)	Solid per 100 g	2082 kJ (498 kcal)	10.8 g soya protein	3.3 g (sugars 2.8 g)	43.6 g	28.7 g	Contains nuts, soya, sulphur dioxide	Intractable epilepsy, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency and other conditions where a ketogenic diet is indicated.	KetoClassic 3:1 Bar: 420 gram = £21.88

KetoClassic® 3:1 Breakfast Muesli (KetoCare Foods Ltd)	Solid per 100 g	2569 kJ (623 kcal)	11 g	7.5 g (sugars 3.8 g)	57.1 g	17.5 g	Contains lactose, nuts, soya, sulphur dioxide	Intractable epilepsy, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency and other conditions where a ketogenic diet is indicated.	KetoClassic 3:1 Breakfast muesli: 600 gram = £34.98
KetoClassic® 3:1 Breakfast Porridge (KetoCare Foods Ltd)	Solid per 100 g	2649 kJ (643 kcal)	11.7 g	7.8 g (sugars 5.4 g)	59.1 g	16.7 g	Contains lactose, nuts, sulphur dioxide	Intractable epilepsy, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency and other conditions where a ketogenic diet is indicated.	KetoClassic 3:1 Breakfast porridge: 600 gram = £34.98
KetoClassic® 3:1 Savoury (KetoCare Foods Ltd)	Solid per 100 g	2190 kJ (531 kcal)	9 g	7.3 g (sugars 1.2 g)	48.7 g	13.7 g	Contains egg, lactose, nuts	Intractable epilepsy, pyruvate dehydrogenase deficiency, glucose transporter type 1 deficiency and other conditions where a ketogenic diet is indicated.	KetoClassic 3:1 Savoury meal: 840 gram = £43.40
Liquigen® (Nutricia Ltd)	Liquid (sip or tube feed) per 100 mL	1865 kJ (454 kcal)	Nil	Nil	50.4 g (MCT 97.4 %)	Nil		Steatorrhoea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, surgery of the intestine, chronic liver disease, liver cirrhosis, other proven malabsorption syndromes, a ketogenic diet in the management of epilepsy, and in type 1 hyperlipoproteinaemia.	Liquigen emulsion: 250 ml = £10.63
MCT Oil (Nutricia Ltd)	Liquid per 100 mL	3515 kJ (855 kcal)	Nil	Nil	95 g MCT 100 %	Nil		Steatorrhoea associated with cystic fibrosis of the pancreas, intestinal lymphangiectasia, surgery of the intestine, chronic liver disease, liver cirrhosis, other proven malabsorption syndromes, ketogenic diet in management of epilepsy, type 1 hyperlipoproteinaemia.	MCT oil: 500 ml = £16.86
Modulen IBD® (Nestle Health Science)	Standard dilution (20%) of powder (sip or tube feed) per 100 mL	420 kJ (100 kcal)	3.6 g casein	11 g (sugars 3.98 g)	4.7 g	Nil	Gluten-free Residual lactose	Crohn's disease active phase, and in remission if malnourished	Modulen IBD powder: 400 gram = £16.19
Powder provides: protein 18 g, carbohydrate 54 g, fat 23 g, energy 2070 kJ (500 kcal)/100 g.									
Monogen® (Nutricia Ltd)	Standard dilution (16.8% w/v) of powder per 100 mL	312 kJ (74 kcal)	2.2 g caseinate, whey protein	11.5 g (sugars 2 g)	2.2 g (MCT 84 %)	Nil	Contains lactose, nuts	For the dietary management of disorders requiring a low LCT, high MCT intake, such as long chain fatty acid oxidation defects (long-chain acyl-CoA dehydrogenase deficiency (LCAD), carnitine palmitoyl transferase deficiency (CPTD)), primary and secondary lipoprotein lipase deficiency (hyperlipoproteinaemia type 1) chylothorax, lymphangiectasia.	Monogen powder: 400 gram = £23.30
Powder provides: protein 12.8 g, carbohydrate 68.6 g, fat 12.9 g, energy 1859 kJ (441 kcal)/100 g

## Feed additives

### Special additives for conditions of intolerance

#### Glucose

- (Dextrose monohydrate) For use as an energy supplement in sucrose-isomaltase deficiency

**Glucose powder for oral use BP 1980** (Ennogen Healthcare Ltd)  
500 gram (ACBS) • No NHS indicative price available • Drug Tariff (Part VIIIA Category C) price = £1.75

**Glucose powder for oral use BP 1980** (Thornton & Ross Ltd)  
500 gram (ACBS) • NHS indicative price = £1.75 • Drug Tariff (Part VIIIA Category C) price = £1.75

### Feed thickeners and pre-thickened drinks

#### Instant Carobel®

- For thickening of liquids or foods in the treatment of vomiting. POWDER, contains residual lactose.

**Instant Carobel powder** (Cow & Gate Ltd)  
135 gram (ACBS) • NHS indicative price = £2.98

#### Multi-thick®

- For thickening of liquids and foods in dysphagia. Not suitable for child under 3 years.  
POWDER, modified maize starch, gluten and lactose-free.

**Multi-thick powder** (Abbott Laboratories Ltd)  
250 gram (ACBS) • NHS indicative price = £4.83

#### Nutilis® Clear

- For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.  
POWDER, contains guar gum, maltodextrin, xanthan gum. Gluten free, lactose-free.

**Nutilis Clear powder** (Nutricia Ltd)  
175 gram (ACBS) • NHS indicative price = £8.46

**Nutilis Clear powder 1.25g sachets** (Nutricia Ltd)  
50 sachet (ACBS) • NHS indicative price = £11.37

#### Nutilis® Powder

- For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years of age.  
POWDER, gluten-free and lactose-free.

**Nutilis powder** (Nutricia Ltd)  
300 gram (ACBS) • NHS indicative price = £5.66

#### Resource® Thickened Drink

- For dysphagia. Not suitable for children under 3 years.  
LIQUID, carbohydrate: orange 21 g; apple 23 g, energy: orange 376 kJ (89 kcal); apple 396 kJ (93 kcal)/100 mL.

**Resource Thickened Drink custard apple** (Nestle Health Science)  
114 mL (ACBS) • NHS indicative price = £0.78

**Resource Thickened Drink custard orange** (Nestle Health Science)  
114 mL (ACBS) • NHS indicative price = £0.78

**Resource Thickened Drink syrup orange** (Nestle Health Science)  
114 mL (ACBS) • NHS indicative price = £0.78

#### Resource® ThickenUp®

- For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.  
POWDER, contains modified food starch (maize).

**Resource ThickenUp powder 4.5g sachets** (Nestle Health Science)  
75 sachet (ACBS) • NHS indicative price = £18.49

**Resource ThickenUp powder** (Nestle Health Science)  
227 gram (ACBS) • NHS indicative price = £4.66

#### Resource® ThickenUp® Clear

- For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.  
POWDER, contains maltodextrin (corn, potato), potassium chloride, residual lactose (tin only), xanthan gum. Gluten-free.

**Resource ThickenUp Clear powder** (Nestle Health Science)  
127 gram (ACBS) • NHS indicative price = £8.46

**Resource ThickenUp Clear powder 1.2g sachets** (Nestle Health Science)  
24 sachet (ACBS) • NHS indicative price = £5.28

#### SLO Drinks®

- Nutritional supplement for patient hydration in the dietary management of dysphagia. Not suitable for children under 3 years.  
POWDER, carbohydrate content varies with flavour and chosen consistency (3 consistencies available), see product literature.

**SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder blackcurrant** (SLO Drinks Ltd)  
250 cup (ACBS) • NHS indicative price = £7.50

**SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder orange** (SLO Drinks Ltd)  
250 cup (ACBS) • NHS indicative price = £7.50

**SLO Drink Stage 2: IDDSI 3 Moderately Thick oral powder blackcurrant** (SLO Drinks Ltd)  
250 cup (ACBS) • NHS indicative price = £7.50

**SLO Drink Stage 2: IDDSI 3 Moderately Thick oral powder orange** (SLO Drinks Ltd)  
250 cup (ACBS) • NHS indicative price = £7.50

#### Thick and Easy®

- For thickening of foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.  
POWDER Modified maize starch

**Thick & Easy Original powder** (Fresenius Kabi Ltd)  
225 gram (ACBS) • NHS indicative price = £5.57 | 4540 gram (ACBS) • NHS indicative price = £96.75

#### Thicken Aid®

- For thickening of foods in dysphagia. Not suitable for child under 1 year; not recommended for child under 3 years  
POWDER, contains maltodextrin, modified maize starch.

**Thicken Aid powder** (Aymes International Ltd)  
225 gram (ACBS) • NHS indicative price = £3.71

#### Thixo-D®

- For thickening of foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.  
POWDER, modified maize starch, gluten-free.

**Thixo-D Original powder** (Ecogreen Technologies Ltd)  
375 gram (ACBS) • NHS indicative price = £8.10

**Thixo-D Cal-Free powder** (Ecogreen Technologies Ltd)  
30 gram • NHS indicative price = £3.00

### Flavouring preparations

#### FlavourPac®

- For use with Vitafo's range of unflavoured protein substitutes for metabolic diseases; not suitable for child under 3 years.  
POWDER

**FlavourPac oral powder 4g sachets blackcurrant** (Vitafo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £15.58

**FlavourPac oral powder 4g sachets orange** (Vitafo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £15.58

**FlavourPac oral powder 4g sachets raspberry** (Vitafo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £15.58

**FlavourPac oral powder 4g sachets tropical** (Vitafo International Ltd)  
30 sachet (ACBS) • NHS indicative price = £15.58

#### Modjul® Flavour System

- For use with unflavoured amino acid and peptide-based Nutricia products used for the dietary management of various conditions including metabolic disorders and gastrointestinal disease.  
POWDER

**Nutricia Flavour Modjul powder blackcurrant** (Nutricia Ltd)  
100 gram (ACBS) • NHS indicative price = £13.97

**Nutricia Flavour Modjul powder orange** (Nutricia Ltd)  
100 gram (ACBS) • NHS indicative price = £13.97

**Nutricia Flavour Modjul powder pineapple** (Nutricia Ltd)  
100 gram (ACBS) • NHS indicative price = £13.97

## Foods for special diets

### Gluten-free foods

**ACBS indications:** established gluten-sensitive enteropathies including steatorrhoea due to gluten sensitivity, coeliac disease, and dermatitis herpetiformis.

#### Bread

##### LOAVES

##### **Barkat® Loaf**

GLUTEN-FREE

**Barkat gluten free par baked white bread sliced** (Gluten Free Foods Ltd)

300 gram (ACBS) • NHS indicative price = £4.21

**Barkat gluten free wholemeal bread sliced** (Gluten Free Foods Ltd)

500 gram (ACBS) • NHS indicative price = £4.05

##### **Genius Gluten Free® Loaf**

GLUTEN-FREE

**Genius gluten free brown sandwich bread sliced** (Genius Foods Ltd)

535 gram (ACBS) • NHS indicative price = £3.80

**Genius gluten free white sandwich bread sliced** (Genius Foods Ltd)

535 gram (ACBS) • NHS indicative price = £3.80

##### **Glutafin® Loaves**

GLUTEN-FREE

**Glutafin gluten free fibre loaf sliced** (Dr Schar UK Ltd)

300 gram (ACBS) • NHS indicative price = £2.89

**Glutafin gluten free white loaf sliced** (Dr Schar UK Ltd)

300 gram (ACBS) • NHS indicative price = £2.89

##### **Glutafin® Select Loaves**

GLUTEN-FREE

**Glutafin gluten free Select fibre loaf sliced** (Dr Schar UK Ltd)

400 gram (ACBS) • NHS indicative price = £3.43

**Glutafin gluten free Select fresh brown loaf sliced** (Dr Schar UK Ltd)

400 gram (ACBS) • NHS indicative price = £3.43

**Glutafin gluten free Select fresh white loaf sliced** (Dr Schar UK Ltd)

400 gram (ACBS) • NHS indicative price = £3.43

**Glutafin gluten free Select seeded loaf sliced** (Dr Schar UK Ltd)

400 gram (ACBS) • NHS indicative price = £3.72

**Glutafin gluten free Select white loaf sliced** (Dr Schar UK Ltd)

400 gram (ACBS) • NHS indicative price = £3.43

##### **Juvela® Loaf**

GLUTEN-FREE

**Juvela gluten free fresh fibre loaf sliced** (Hero UK Ltd)

400 gram (ACBS) • NHS indicative price = £3.39

**Juvela gluten free fresh white loaf sliced** (Hero UK Ltd)

400 gram (ACBS) • NHS indicative price = £3.69

**Juvela gluten free fibre loaf sliced** (Hero UK Ltd)

400 gram (ACBS) • NHS indicative price = £3.54

**Juvela gluten free part baked loaf** (Hero UK Ltd)

400 gram (ACBS) • NHS indicative price = £3.95

**Juvela gluten free part baked fibre loaf** (Hero UK Ltd)

400 gram (ACBS) • NHS indicative price = £3.80

**Juvela gluten free loaf unsliced** (Hero UK Ltd)

400 gram (ACBS) • NHS indicative price = £3.54

**Juvela gluten free fibre loaf unsliced** (Hero UK Ltd)

400 gram (ACBS) • NHS indicative price = £3.54

##### **Lifestyle® Loaf**

GLUTEN-FREE

**Lifestyle gluten free brown bread sliced** (Ultraparm Ltd)

400 gram (ACBS) • NHS indicative price = £2.82

**Lifestyle gluten free high fibre bread sliced** (Ultraparm Ltd)

400 gram • NHS indicative price = £2.82

**Lifestyle gluten free white bread sliced** (Ultraparm Ltd)

400 gram • NHS indicative price = £2.82

##### **Warburtons® Loaf**

GLUTEN-FREE

**Warburtons gluten free brown bread sliced** (Warburtons Ltd)

400 gram (ACBS) • NHS indicative price = £3.06

**Warburtons gluten free white bread sliced** (Warburtons Ltd)

400 gram (ACBS) • NHS indicative price = £3.06

#### **BAGUETTES, BUNS AND ROLLS**

##### **Barkat® Baguettes and rolls**

GLUTEN-FREE

**Barkat gluten free par baked rolls** (Gluten Free Foods Ltd)

200 gram (ACBS) • NHS indicative price = £4.05

**Barkat gluten free par baked baguettes** (Gluten Free Foods Ltd)

200 gram (ACBS) • NHS indicative price = £4.05

##### **Glutafin® Baguettes and rolls**

GLUTEN-FREE

**Glutafin gluten free baguettes** (Dr Schar UK Ltd)

350 gram (ACBS) • NHS indicative price = £3.51

**Glutafin gluten free 4 white rolls** (Dr Schar UK Ltd)

200 gram (ACBS) • NHS indicative price = £3.68

**Glutafin gluten free part baked 4 fibre rolls** (Dr Schar UK Ltd)

200 gram (ACBS) • NHS indicative price = £3.68

##### **Glutafin® Select Rolls**

GLUTEN-FREE

**Glutafin gluten free part baked 4 white rolls** (Dr Schar UK Ltd)

200 gram (ACBS) • NHS indicative price = £3.68

**Glutafin gluten free part baked 2 long white rolls** (Dr Schar UK Ltd)

150 gram (ACBS) • NHS indicative price = £2.81

##### **Juvela® Rolls**

GLUTEN-FREE

**Juvela gluten free fresh fibre rolls** (Hero UK Ltd)

425 gram (ACBS) • NHS indicative price = £4.42

**Juvela gluten free fresh white rolls** (Hero UK Ltd)

425 gram (ACBS) • NHS indicative price = £4.42

**Juvela gluten free fibre bread rolls** (Hero UK Ltd)

425 gram (ACBS) • NHS indicative price = £4.77

**Juvela gluten free bread rolls** (Hero UK Ltd)

425 gram (ACBS) • NHS indicative price = £4.77

**Juvela gluten free part baked fibre bread rolls** (Hero UK Ltd)

375 gram (ACBS) • NHS indicative price = £4.94

**Juvela gluten free part baked white bread rolls** (Hero UK Ltd)

375 gram (ACBS) • NHS indicative price = £4.94

##### **Lifestyle® Rolls**

GLUTEN-FREE

**Lifestyle gluten free brown bread rolls** (Ultraparm Ltd)

400 gram (ACBS) • NHS indicative price = £2.82

**Lifestyle gluten free high fibre bread rolls** (Ultraparm Ltd)

400 gram (ACBS) • NHS indicative price = £2.82

**Lifestyle gluten free white bread rolls** (Ultraparm Ltd)

400 gram (ACBS) • NHS indicative price = £2.82

##### **Proceli® Baguettes, buns and rolls**

GLUTEN-FREE

**Proceli gluten free part baked baguettes** (Ambe Ltd)

250 gram (ACBS) • NHS indicative price = £3.24

##### **Warburtons® Baguettes and rolls**

GLUTEN-FREE

**Warburtons gluten free brown rolls** (Warburtons Ltd)

220 gram (ACBS) • NHS indicative price = £2.55

**Warburtons gluten free white rolls** (Warburtons Ltd)

220 gram (ACBS) • NHS indicative price = £2.55

#### **Cereals**

##### **Juvela® Fibre flakes and oats**

GLUTEN-FREE

**Juvela gluten free fibre flakes** (Hero UK Ltd)

300 gram • NHS indicative price = £2.78

**Juvela gluten free flakes** (Hero UK Ltd)

300 gram • NHS indicative price = £2.78

**Juvela gluten free pure oats** (Hero UK Ltd)

500 gram • NHS indicative price = £2.78

##### **Nairns® Porridge**

GLUTEN-FREE

**Nairn's gluten free oat porridge** (Nairn's Oatcakes Ltd)

500 gram • NHS indicative price = £3.05

**Cookies and biscuits****Barkat® Biscuits**

GLUTEN-FREE

**Barkat gluten free digestive biscuits** (Gluten Free Foods Ltd)

175 gram • NHS indicative price = £2.66

**Glutafin® Cookies and biscuits**

GLUTEN-FREE

**Glutafin gluten free digestive biscuits** (Dr Schar UK Ltd)

150 gram • NHS indicative price = £2.13

**Glutafin gluten free shortbread biscuits** (Dr Schar UK Ltd)

100 gram • NHS indicative price = £1.73

**Juvela® Biscuits**

GLUTEN-FREE

**Juvela gluten free digestive biscuits** (Hero UK Ltd)

150 gram • NHS indicative price = £3.05

**Juvela gluten free savoury biscuits** (Hero UK Ltd)

150 gram • NHS indicative price = £3.82

**Juvela gluten free sweet biscuits** (Hero UK Ltd)

150 gram • NHS indicative price = £2.88

**Juvela gluten free tea biscuits** (Hero UK Ltd)

150 gram • NHS indicative price = £3.05

**Crackers, crispbreads, and breadsticks****Barkat® Crackers**

GLUTEN-FREE

**Barkat gluten free matzo crackers** (Gluten Free Foods Ltd)

200 gram • NHS indicative price = £3.59

**Glutafin® Crackers**

GLUTEN-FREE

**Glutafin gluten free crackers** (Dr Schar UK Ltd)

200 gram • NHS indicative price = £3.46

**Glutafin gluten free mini crackers** (Dr Schar UK Ltd)

175 gram • NHS indicative price = £2.96

**Juvela® Crispbread**

GLUTEN-FREE

**Juvela gluten free crispbread** (Hero UK Ltd)

## Nutritional supplements for metabolic diseases

### Glutaric aciduria (type 1)

#### GA Gel<sup>®</sup>

- ▶ Nutritional supplement for dietary management of type 1 glutaric aciduria in children 6 months–10 years. GEL, protein equivalent (essential and non-essential amino acids except lysine, and low tryptophan) 10 g, carbohydrate 10.5 g, fat trace, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1644.

**GA gel oral powder 24g sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) • NHS indicative price = £240.23

#### XYLYS, TRY Glutaridon<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of type 1 glutaric aciduria in children and adults; requires additional source of vitamins, minerals, and trace elements. POWDER, protein equivalent (essential and non-essential amino acids except lysine and tryptophan) 79 g, carbohydrate 4 g, energy 1411 kJ (332 kcal)/100 g. To flavour unflavoured products, see Modul Flavour System p. 1644.

**XYLYS TRY Glutaridon powder** (Nutricia Ltd)  
500 gram (ACBS) • NHS indicative price = £213.65

### Glycogen storage disease

#### Glycosade<sup>®</sup>

- ▶ A nutritional supplement for use in the dietary management of glycogen storage disease and other metabolic conditions where a constant supply of glucose is essential. Not suitable for use in children under 2 years. POWDER, protein 200 mg, carbohydrate (maize starch) 47.6 g, fat 100 mg, fibre less than 600 mg, energy 803 kJ (192 kcal)/60 g.

**Glycosade oral powder 60g sachets unflavoured** (Vitaflor International Ltd)  
30 sachet (ACBS) • NHS indicative price = £126.25

### Homocystinuria or hypermethioninaemia

#### HCU cooler<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of homocystinuria. Not suitable for use in child under 5 years. Includes added vitamins A, B, C, D, E and K. LIQUID, protein equivalent 11.5 g, carbohydrate 5.1 g, fat 0.9 g, energy 316 kJ (75 kcal)/100 mL.

**HCU orange cooler15 liquid** (Vitaflor International Ltd)  
130 ml (ACBS) • NHS indicative price = £12.68

**HCU red cooler10 liquid** (Vitaflor International Ltd)  
87 ml (ACBS) • NHS indicative price = £8.12

**HCU red cooler15 liquid** (Vitaflor International Ltd)  
130 ml (ACBS) • NHS indicative price = £12.68

**HCU red cooler20 liquid** (Vitaflor International Ltd)  
174 ml (ACBS) • NHS indicative price = £16.97

#### HCU Express<sup>®</sup> 15

- ▶ A methionine-free protein substitute for use as a nutritional supplement in children over 8 years with homocystinuria. POWDER, protein (essential and non-essential amino acids except methionine) 15 g, carbohydrate 3.8 g, fat 30 mg, energy 315 kJ (75.3 kcal)/25 g with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1644.

**HCU express15 oral powder 25g sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) • NHS indicative price = £373.05

#### HCU Express<sup>®</sup> 20

- ▶ A methionine-free protein substitute for use as a nutritional supplement in children over 8 years with homocystinuria. POWDER, protein (essential and non-essential amino acids except methionine) 20 g, carbohydrate 4.7 g, fat 70 mg, energy 416 kJ (99 kcal)/34 g with vitamins, minerals, and trace

elements. To flavour unflavoured products, see FlavourPac p. 1644

**HCU express20 oral powder 34g sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) • NHS indicative price = £481.98

#### HCU gel<sup>®</sup>

- ▶ A methionine-free protein substitute for use as a nutritional supplement for the dietary management of children 1–10 years with homocystinuria.

POWDER, protein (essential and non-essential amino acids except methionine) 10 g, carbohydrate 10.3 g, fat 20 mg, energy 339 kJ (81 kcal)/24 g with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1644.

**HCU gel oral powder 24g sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) • NHS indicative price = £240.17

#### HCU Lophlex<sup>®</sup> LQ

- ▶ Nutritional supplement for the dietary management of homocystinuria. Not suitable for use in child under 4 years. Includes added vitamins A, B, C, D, E and K. LIQUID, protein 16 g, carbohydrate 7 g, fat 0.35 g, energy 407 kJ (96 kcal)/100 mL.

**HCU Lophlex LQ 10 liquid** (Nutricia Ltd)  
62.5 ml (ACBS) • NHS indicative price = £8.92

**HCU Lophlex LQ 20 liquid** (Nutricia Ltd)  
125 ml (ACBS) • NHS indicative price = £18.40

#### HCU Maxamum<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of hypermethioninaemia, homocystinuria. Not suitable for use in child under 8 years. Includes added vitamins A, C, D, E and K. POWDER, protein 39 g, carbohydrate 34 g, fat <0.5 g, energy 1260 kJ (297 kcal)/100 g.

**HCU Maxamum powder** (Nutricia Ltd)  
500 gram (ACBS) • NHS indicative price = £180.78

#### HCU-LV<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of hypermethioninaemia or vitamin B6 non-responsive homocystinuria. Not suitable for use in child under 8 years. Includes added vitamins A, C, D E and K. POWDER, protein 72 g, carbohydrate 9 g, fat 0.7 g, energy 1403 kJ (330 kcal)/100 g.

**HCU-LV oral powder 27.8g sachets tropical** (Nutricia Ltd)  
30 sachet (ACBS) • NHS indicative price = £566.04

**HCU-LV oral powder 27.8g sachets unflavoured** (Nutricia Ltd)  
30 sachet (ACBS) • NHS indicative price = £566.04

#### XMET Homidon<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of hypermethioninaemia or homocystinuria in children and adults. POWDER, protein equivalent (essential and non-essential amino acids, except methionine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g. To flavour unflavoured products, see Modul Flavour System p. 1644.

**XMET Homidon powder** (Nutricia Ltd)  
500 gram (ACBS) • NHS indicative price = £213.65

### Maple syrup urine disease

#### MSUD Aid III<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease (MSUD) and related conditions when it is necessary to limit the intake of branched chain amino acids. POWDER, protein 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

**MSUD Aid 111 powder** (Nutricia Ltd)  
500 gram (ACBS) • NHS indicative price = £213.65

#### MSUD cooler<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease. Not recommended for child under 3 years. Includes added vitamins A, B, C, D, E and K. LIQUID, protein equivalent) 11.5 g, carbohydrate 5.1 g, fat 0.9 g, energy 316 kJ (75 kcal)/100 mL.

**MSUD orange cooler15 liquid** (Vitafo International Ltd)

130 ml (ACBS) • NHS indicative price = £12.68

**MSUD red cooler10 liquid** (Vitafo International Ltd)

87 ml (ACBS) • NHS indicative price = £8.12

**MSUD red cooler15 liquid** (Vitafo International Ltd)

130 ml (ACBS) • NHS indicative price = £12.68

**MSUD red cooler20 liquid** (Vitafo International Ltd)

174 ml (ACBS) • NHS indicative price = £16.97

**MSUD express® 15**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 8 years and adults. POWDER, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 15 g, carbohydrate 3.8 g, fat less than 100 mg, energy 315 kJ (75 kcal)/25 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1644.

**MSUD express15 oral powder 25g sachets** (Vitafo International Ltd)

30 sachet (ACBS) • NHS indicative price = £373.05

**MSUD express® 20**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 8 years and adults. POWDER, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 20 g, carbohydrate 4.7 g, fat less than 100 mg, energy 416 kJ (99 kcal)/34 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1644.

**MSUD express20 oral powder 34g sachets** (Vitafo International Ltd)

30 sachet (ACBS) • NHS indicative price = £481.98

**MSUD Gel®**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years. POWDER, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 10 g, carbohydrate 10.3 g, fat less than 100 mg, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1644.

**MSUD gel 24g sachets** (Vitafo International Ltd)

30 sachet (ACBS) • NHS indicative price = £242.99

**MSUD Lophlex® LQ**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease. Not recommended for child under 4 years. Includes added vitamins A, C, D, E and K. LIQUID, protein equivalent (essential and non-essential amino acids) 16 g, carbohydrate 7 g, fat 0.35 g, energy 407 kJ (96 kcal)/100 mL.

**MSUD Lophlex LQ 10 liquid** (Nutricia Ltd)

62.5 ml (ACBS) • NHS indicative price = £8.92

**MSUD Lophlex LQ 20 liquid** (Nutricia Ltd)

125 ml (ACBS) • NHS indicative price = £18.40

**MSUD Maxamum®**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease. Not recommended for child under 8 years. Includes added vitamins A, B, C, D, E and K. POWDER, protein equivalent (essential and non-essential amino acids) 39 g, carbohydrate 34 g, fat less than 0.5 g, energy 1260 kJ (297 kcal)/100 g.

**MSUD Maxamum powder orange** (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £180.78

**MSUD Maxamum powder unflavoured** (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £180.78

**Methylmalonic or propionic acidaemia****MMA/PA Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven methylmalonic acidaemia or propionic acidaemia in children from birth to 5 years. POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and

trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**MMA / PA Anamix Infant powder** (Nutricia Ltd)

400 gram (ACBS) • NHS indicative price = £43.52

**MMA/PA Maxamum®**

- ▶ Nutritional supplement for the dietary management of methylmalonic acidaemia or propionic acidaemia. POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see Modul Flavour System p. 1644. Maxamum products are generally intended for use in children over 8 years.

**MMA/PA Maxamum powder** (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £180.78

**XMTVI Asadon®**

- ▶ Nutritional supplement for the dietary management of methylmalonic acidaemia or propionic acidaemia in children and adults. POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g. To flavour unflavoured products, see Modul Flavour System p. 1644.

**XMTVI Asadon powder** (Nutricia Ltd)

200 gram (ACBS) • NHS indicative price = £85.46

**Other inborn errors of metabolism****Cystine500®**

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from 3 years. POWDER, cystine 500 mg, carbohydrate 3.3 g, fat nil, energy 64 kJ (15 kcal)/4 g

**Cystine500 oral powder sachets** (Vitafo International Ltd)

30 sachet (ACBS) • NHS indicative price = £61.02

**DocOmega®**

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism for adults and children from birth. POWDER, protein (cows' milk, soya) 100 mg, carbohydrate 3.2 g, fat 500 mg (of which docosahexaenoic acid 200 mg), fibre nil, energy 74 kJ (18 kcal)/4 g, with minerals

**DocOmega oral powder 4g sachets** (Vitafo International Ltd)

30 sachet (ACBS) • NHS indicative price = £44.16

**EAA® Supplement**

- ▶ Nutritional supplement for the dietary management of disorders of protein metabolism including urea cycle disorders in children over 3 years. POWDER, protein equivalent (essential amino acids) 5 g, carbohydrate 4 g, fat nil, energy 151 kJ (36 kcal)/12.5 g, with vitamins, minerals, and trace elements.

**EAA Supplement oral powder 12.5g sachets** (Vitafo International Ltd)

50 sachet (ACBS) • NHS indicative price = £230.27

**Isoleucine50®**

- ▶ Nutritional supplement for use in the dietary management of inborn errors of amino acid metabolism in adults and children from birth. POWDER, isoleucine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Isoleucine50 oral powder 4g sachets** (Vitafo International Ltd)

30 sachet (ACBS) • NHS indicative price = £61.02

**KeyOmega®**

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism. Includes added vitamin C. POWDER, protein 4.4 g, carbohydrate 70 g, fat 19 g, energy 1999 kJ (476 kcal)/100 g.

**KeyOmega oral powder 4g sachets** (VitaFlo International Ltd)

30 sachet (ACBS) • NHS indicative price = £45.16

**Leucine100®**

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, leucine 100 mg, carbohydrate 3.7 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Leucine100 oral powder sachets** (VitaFlo International Ltd)

30 sachet (ACBS) • NHS indicative price = £61.02

**Low protein drink**

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children over 1 year.

POWDER, protein (cows' milk) 4.5 g (phenylalanine 100 mg), carbohydrate 59.5 g, fat 29.9 g, fibre nil, energy 2194 kJ (528 kcal)/100 g, with vitamins, minerals, and trace elements. Contains lactose.

Termed *Milupa® lp-drink* by manufacturer.**Milupa LP drink** (Nutricia Ltd)

400 gram (ACBS) • NHS indicative price = £10.00

**Phenylalanine50®**

- ▶ Nutritional supplement for use in the dietary management of inborn errors of metabolism in adults and children from birth.

POWDER, phenylalanine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Phenylalanine50 oral powder sachets** (VitaFlo International Ltd)

30 sachet (ACBS) • NHS indicative price = £59.25

**ProZero®**

- ▶ A protein-free nutritional supplement for the dietary management of inborn errors of metabolism in children over 6 months and adults.

LIQUID, carbohydrate 8.1 g (of which sugars 3.5 g), fat 3.8 g, energy 278 kJ (66 kcal)/100 mL. Contains lactose.

**ProZero liquid** (VitaFlo International Ltd)

250 mL (ACBS) • NHS indicative price = £1.62 | 1000 mL (ACBS)

• NHS indicative price = £6.50

**Tyrosine1000®**

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, tyrosine 1 g, carbohydrate 2.9 g, fat nil, energy 63 kJ (15 kcal)/4-g sachet.

**Tyrosine1000 oral powder 4g sachets** (VitaFlo International Ltd)

30 sachet (ACBS) • NHS indicative price = £5.57

**Valine50®**

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, valine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Valine50 oral powder 4g sachets** (VitaFlo International Ltd)

30 sachet (ACBS) • NHS indicative price = £61.02

**Phenylketonuria****Easiphen®**

- ▶ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 8 years. Includes added vitamins A, B, C, D, E and K.

LIQUID, protein equivalent 6.7 g, carbohydrate 5.1 g, fat 2 g, energy 275 kJ (65 kcal)/100 mL

**Easiphen liquid** (Nutricia Ltd)

250 mL (ACBS) • NHS indicative price = £10.73

**Glytactin RTD Lite 15**

- ▶ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.

LIQUID, protein 6 g, carbohydrate 3 g, fat 1.4 g, energy 201 kJ (48 kcal)/100 mL

**Glytactin RTD Lite 15 liquid coffee mocha** (Cambrooke Therapeutics)

250 mL (ACBS) • NHS indicative price = £8.55

**Glytactin RTD Lite 15 liquid vanilla** (Cambrooke Therapeutics)

250 mL (ACBS) • NHS indicative price = £8.55

**L-Tyrosine**

- ▶ Nutritional supplement for the dietary management of maternal phenylketonuria in patients with low plasma tyrosine levels.

POWDER, protein 90.1 g, carbohydrate nil, fat nil, energy 1532 kJ (360 kcal)/100 g.

**L-Tyrosine powder** (Nutricia Ltd)

100 gram (ACBS) • NHS indicative price = £25.16

**Lophlex®**

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years and adults including pregnant women.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 2.5 g, fat 60 mg, fibre 220 mg, energy 385 kJ (91 kcal)/27.8-g sachet, with vitamins, minerals, and trace elements.

**Lophlex powder 27.8g sachets berry** (Nutricia Ltd)

30 sachet (ACBS) • NHS indicative price = £314.10

**Lophlex powder 27.8g sachets orange** (Nutricia Ltd)

30 sachet (ACBS) • NHS indicative price = £314.10

**Lophlex powder 27.8g sachets unflavoured** (Nutricia Ltd)

30 sachet (ACBS) • NHS indicative price = £314.10

**Loprofin® PKU Drink**

- ▶ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 1 year.

LIQUID, protein 0.4 g, carbohydrate 5.0 g, fat 2.0 g, energy 166 kJ (40 kcal)/100 mL

**Loprofin PKU drink** (Nutricia Ltd)

200 mL (ACBS) • NHS indicative price = £0.81

**Loprofin® SNO-PRO**

- ▶ Nutritional supplement for the dietary management of phenylketonuria, chronic renal failure and other inborn errors of metabolism. Not suitable for use in child under 6 months.

LIQUID, protein 0.16 g, carbohydrate 10.8 g, fat 4.7 g, energy 371 kJ (89 kcal)/100 mL

**Loprofin SNO-PRO drink** (Nutricia Ltd)

200 mL (ACBS) • NHS indicative price = £1.35

**Phlexy-10® Exchange System**

- ▶ Nutritional supplement for the dietary management of phenylketonuria.

TABLETS, protein equivalent (essential and non-essential amino acids except phenylalanine) 833 mg tablet.

**Phlexy-10 tablets** (Nutricia Ltd)

75 tablet (ACBS) • NHS indicative price = £31.03

DRINK MIX, powder, protein equivalent (essential and non-essential amino acids except phenylalanine) 8.33 g, carbohydrate 8.8 g/20-g sachet.

**Phlexy-10 drink mix 20g sachets apple & blackcurrant** (Nutricia Ltd)

30 sachet (ACBS) • NHS indicative price = £142.82

**PKU GMP®**

- Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 3 years; not recommended for child under 6 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein 30 g, carbohydrate 37.5 g, fat 11.7 g, energy 1616 kJ (384 kcal)/100 g.

**PKU GMP oral powder 33.3g sachets** (Nutricia Ltd)

16 sachet (ACBS) • NHS indicative price = £93.57

**PKU GMP® LQ**

- Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 3 years, not recommended in child under 6 years. Includes added vitamins A, B, C, D, E and K.

LIQUID, protein equivalent 4 g, carbohydrate 3.4 g, fat 1.6 g, energy 188 kJ (45 kcal)/100 mL

**PKU GMP LQ liquid** (Nutricia Ltd)

250 mL (ACBS) • NHS indicative price = £5.84

**PKU Lophlex® LQ**

- Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 1 year; not recommended for child under 4 years. Includes added vitamins A, B, C, D, E and K.

LIQUID, protein 16 g, carbohydrate 7 g, fat 0–0.4 g, energy 391–407 kJ (92–96 kcal)/100 mL.

**PKU Lophlex LQ 10 liquid berry** (Nutricia Ltd)

62.5 mL (ACBS) • NHS indicative price = £5.61

**PKU Lophlex LQ 10 liquid juicy berries** (Nutricia Ltd)

62.5 mL (ACBS) • NHS indicative price = £5.61

**PKU Lophlex LQ 10 liquid juicy citrus** (Nutricia Ltd)

62.5 mL (ACBS) • NHS indicative price = £5.61

**PKU Lophlex LQ 10 liquid juicy orange** (Nutricia Ltd)

62.5 mL (ACBS) • NHS indicative price = £5.61

**PKU Lophlex LQ 10 liquid juicy tropical** (Nutricia Ltd)

62.5 mL (ACBS) • NHS indicative price = £5.61

**PKU Lophlex LQ 20 liquid berry** (Nutricia Ltd)

125 mL (ACBS) • NHS indicative price = £11.19

**PKU Lophlex LQ 20 liquid orange** (Nutricia Ltd)

125 mL (ACBS) • NHS indicative price = £11.19

**PKU Lophlex LQ 20 liquid juicy berries** (Nutricia Ltd)

125 mL (ACBS) • NHS indicative price = £11.19

**PKU Lophlex LQ 20 liquid juicy citrus** (Nutricia Ltd)

125 mL (ACBS) • NHS indicative price = £11.19

**PKU Lophlex LQ 20 liquid juicy orange** (Nutricia Ltd)

125 mL (ACBS) • NHS indicative price = £11.19

**PKU Lophlex LQ 20 liquid juicy tropical** (Nutricia Ltd)

125 mL (ACBS) • NHS indicative price = £11.19

**PKU Lophlex® Sensation 20**

- Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 4 years. Includes added vitamins A, B, C, D, E and K. SEMI-SOLID, protein 18.3 g, carbohydrate 18.5 g, fat 0.3 g, energy 648 kJ (152 kcal)/100 g.

**PKU Lophlex Sensation 20 berries** (Nutricia Ltd)

327 gram (ACBS) • NHS indicative price = £35.76

**PKU Maxamum®**

- Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 8 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein 39 g, carbohydrate 34 g, fat less than 0.5 g, energy 1260 kJ (297 kcal)/100 g.

**PKU Maxamum oral powder 50g sachets orange** (Nutricia Ltd)

30 sachet (ACBS) • NHS indicative price = £299.79

**PKU Maxamum oral powder 50g sachets unflavoured** (Nutricia Ltd)

30 sachet (ACBS) • NHS indicative price = £299.79

**PKU Maxamum powder orange** (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £99.97

**PKU Maxamum powder unflavoured** (Nutricia Ltd)

500 gram (ACBS) • NHS indicative price = £99.97

**Tyrosinaemia****Methionine-free TYR Anamix® Infant**

- Nutritional supplement for the dietary management of proven tyrosinaemia type 1 in children from birth to 3 years.

POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**TYR Anamix Infant methionine free powder** (Nutricia Ltd)

400 gram (ACBS) • NHS indicative price = £43.52

**TYR Anamix® Infant**

- Nutritional supplement for the dietary management of proven tyrosinaemia where plasma-methionine concentrations are normal in children from birth to 3 years.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**TYR Anamix Infant methionine free powder** (Nutricia Ltd)

400 gram (ACBS) • NHS indicative price = £43.52

**TYR Anamix Infant powder** (Nutricia Ltd)

400 gram (ACBS) • NHS indicative price = £43.52

**TYR Cooler®**

- Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.

LIQUID, protein equivalent 11.5 g, carbohydrate 5.1 g, fat 0.9 g, energy 316 kJ (75 kcal)/100 mL.

**TYR orange cooler15 liquid** (VitaFlo International Ltd)

130 mL (ACBS) • NHS indicative price = £12.68

**TYR red cooler10 liquid** (VitaFlo International Ltd)

87 mL (ACBS) • NHS indicative price = £8.12

**TYR red cooler15 liquid** (VitaFlo International Ltd)

130 mL (ACBS) • NHS indicative price = £12.68

**TYR red cooler20 liquid** (VitaFlo International Ltd)

174 mL (ACBS) • NHS indicative price = £16.97

**TYR® Easy Shake & Go**

- Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.

POWDER, protein equivalent 45 g, carbohydrate 38 g, fat less than 0.5 g, energy 1542 kJ (363 kcal)/100 g.

**TYR Easy Shake & Go oral powder 34g sachets** (POA Pharma Scandinavia AB)

30 sachet (ACBS) · NHS indicative price = £362.00

**TYR express®**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 8 years. Includes added vitamins A, B, C, D, E and K.  
POWDER, protein equivalent 60 g, carbohydrate 13.7 g, fat 0.2 g, energy 1260 kJ (297 kcal)/100 g.

**TYR express15 oral powder 25g sachets** (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £373.05

**TYR express20 oral powder 34g sachets** (Vitaflo International Ltd)

30 sachet (ACBS) · NHS indicative price = £481.98

**TYR Lophlex® LQ**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia. Includes added vitamins A, B, C, D, E and K.  
LIQUID, protein 16 g, carbohydrate 7 g, fat 0.4 g, energy 407 kJ (96 kcal)/100 mL

**TYR Lophlex LQ 10 liquid** (Nutricia Ltd)

62.5 mL (ACBS) · NHS indicative price = £8.92

**TYR Lophlex LQ 20 liquid** (Nutricia Ltd)

125 mL (ACBS) · NHS indicative price = £18.40

**XPHEN TYR Tyrosidon®**

- ▶ Nutritional supplement for the management of tyrosinaemia in children and adults where plasma-methionine concentrations are normal.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g. To flavour unflavoured products, see Modjul Flavour System p. 1644.

**XPHEN TYR Tyrosidon Free AA Mix powder** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £213.65

## Appendix 3

# Cautionary and advisory labels for dispensed medicines

### Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

### Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

### Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no verbal instructions, the directions given under 'Dose' should be used on the label.

It is recognised that there may be occasions when pharmacists will use their knowledge and professional discretion and decide to omit one or more of the recommended labels for a particular patient. In this case counselling is of the utmost importance. There may also be an occasion when a prescriber does not wish additional cautionary labels to be used, in which case the prescription should be endorsed 'NCL' (no cautionary labels). The exact wording that is required instead should then be specified on the prescription.

Pharmacists label medicines with various wordings in addition to those directions specified on the prescription. Such labels include 'Shake the bottle', 'For external use only', and 'Store in a cool place', as well as 'Discard... days after opening' and 'Do not use after...', which apply particularly to antibiotic mixtures, diluted liquid and topical preparations, and to eye-drops. Although not listed in the BNF these labels should continue to be used when appropriate; indeed, 'For external use only' is a legal requirement on external liquid preparations, while 'Keep out of the reach of children' is a legal requirement on all dispensed medicines. Care should be taken not to obscure other relevant information with adhesive labelling.

It is the usual practice for patients to take standard tablets with water or other liquid and for this reason no separate label has been recommended.

The label wordings recommended by the BNF apply to medicines dispensed against a prescription. Patients should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the BNF does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The BNF will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

### Recommended label wordings

For BNF 61 (March 2011), a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–30, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 31 and 33 no longer apply to any medicines in the BNF and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification. If changes are made to suit computer requirements, care should be taken to retain the sense of the original.

### Welsh labels

Comprehensive Welsh translations are available for each cautionary and advisory label.

### Labels

#### 1 Warning: This medicine may make you sleepy

**Rhybudd:** Gall y feddyginiath hon eich gwneud yn gysgld

To be used on *preparations for children* containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.

#### 2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol

**Rhybudd:** Gall y feddyginiath hon eich gwneud yn gysgld. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd. Peidiwch ag yfed alcohol

To be used on *preparations for adults that can cause drowsiness*, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. It is an offence to drive while under the influence of drink or drugs.

Some of these preparations only cause drowsiness in the first few days of treatment and some only cause drowsiness in higher doses.

In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking the medicine. Pharmacists should therefore explain the risk

and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also label 3). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient's doctor.

Side-effects unrelated to drowsiness that may affect a patient's ability to drive or operate machinery safely include *blurred vision, dizziness, or nausea*. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.

- 3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines**

**Rhybudd:** Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd

To be used on *preparations containing monoamine-oxidase inhibitors*; the warning to avoid alcohol and dealcoholised (low alcohol) drink is covered by the patient information leaflet.

Also to be used as for label 2 but where alcohol is not an issue.

- 4 Warning: Do not drink alcohol**

**Rhybudd:** Peidiwch ag yfed alcohol

To be used on *preparations where a reaction such as flushing may occur if alcohol is taken* (e.g. metronidazole). Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary.

Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.

- 5 Do not take indigestion remedies 2 hours before or after you take this medicine**

**Peidiwch â chymryd meddyginiaethau camdrefuliad 2 awr cyn neu ar ôl y feddyginiaeth hon**

To be used with label 25 on *preparations coated to resist gastric acid* (e.g. enteric-coated tablets). This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH.

Label 5 also applies to drugs such as gabapentin *where the absorption is significantly affected by antacids*. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

**Peidiwch â chymryd meddyginiaethau camdrefuliad neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl y feddyginiaeth hon**

To be used on *preparations containing ofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillamine*. These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

**Peidiwch â chymryd llaeth, meddyginiaethau camdrefuliad, neu feddyginiaeth sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl cymryd y feddyginiaeth hon**

To be used on *preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc*, and are thus less available for absorption. Pharmacists will be aware (from a knowledge of

physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient. Doxycycline, lymecycline, and minocycline are less liable to form chelates and therefore only require label 6 (see above).

- 8 Warning: Do not stop taking this medicine unless your doctor tells you to stop**

**Rhybudd:** Peidiwch â stopio cymryd y feddyginiaeth hon, oni bai fod eich meddyg yn dweud wrthydd am stopio

To be used on *preparations that contain a drug which is required to be taken over long periods without the patient necessarily perceiving any benefit* (e.g. antituberculous drugs).

Also to be used on *preparations that contain a drug whose withdrawal is likely to be a particular hazard* (e.g. clonidine for hypertension). Label 10 (see below) is more appropriate for corticosteroids.

- 9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop**

**Gadewch yr un faint o amser rhwng pob dŵs yn ystod y dydd.**

**Parhewch i gymryd y feddyginiaeth nes bod y cyfan wedi'i corffio, oni bai eich bod yn cael cynyg i stopio**

To be used on *preparations where a course of treatment should be completed to reduce the incidence of relapse or failure of treatment*.

The preparations are antimicrobial drugs given by mouth. Very occasionally, some may have severe side-effects (e.g. diarrhoea in patients receiving clindamycin) and in such cases the patient may need to be advised of reasons for stopping treatment quickly and returning to the doctor.

- 10 Warning: Read the additional information given with this medicine**

**Rhybudd:** Darllenwch y wybodaeth ychwanegol gyda'r feddyginiaeth hon

To be used particularly on *preparations containing anticoagulants, lithium, and oral corticosteroids*. The appropriate treatment card should be given to the patient and any necessary explanations given.

This label may also be used on other preparations to remind the patient of the instructions that have been given.

- 11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds**

**Diogelwch eich croen rhag golau'r haul, hyd yn oed ar ddiwrnod braf ond cymlog. Peidiwch â defnyddio gwely haul**

To be used on *preparations that may cause phototoxic or photoallergic reactions* if the patient is exposed to ultraviolet radiation. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.

- 12 Do not take anything containing aspirin while taking this medicine**

**Peidiwch â chymryd unrhyw beth sy'n cynnwys aspirin gyda'r feddyginiaeth hon**

To be used on *preparations containing sulfinpyrazone* whose activity is reduced by aspirin.

Label 12 should not be used for anticoagulants since label 10 is more appropriate.

- 13 Dissolve or mix with water before taking**

**Gadewch i dodd mewn dŵr cyn ei gymryd**

To be used on *preparations that are intended to be dissolved in water* (e.g. soluble tablets) or *mixed with water* (e.g. powders, granules) before use. In a few cases other liquids such as fruit juice or milk may be used.

- 14 This medicine may colour your urine. This is harmless**

**Gall y feddyginiaeth hon liwio eich dŵr. Nid yw hyn yn arwydd o ddrwg**

To be used on *preparations that may cause the patient's urine to turn an unusual colour*. These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).

- 15 Caution: flammable. Keep your body away from fire or flames after you have put on the medicine**  
**Rhybudd:** Fflamadwy. Ar ôl rhoi'r feddyginiaeth ymlaen, cadwch yn glir o dân neu fflamau  
 To be used on *preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame.*
- 16 Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening**  
**Rhowch y dabled i doddi dan eich tafod - peidiwch â'i lyncu.** Cadwch y tabledi yn y botel yma gyda'r caead wedi'i gau yn dynn. Gofynnwch am dabledi newydd 8 wythnos ar ôl ei hagar  
 To be used on *glyceryl trinitrate tablets* to remind the patient not to transfer the tablets to plastic or less suitable containers.
- 17 Do not take more than... in 24 hours**  
**Peidiwch â chymryd mwy na... mewn 24 awr**  
 To be used on *preparations for the treatment of acute migraine* except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or capsules.  
 It may also be used on preparations for which no dose has been specified by the prescriber.
- 18 Do not take more than... in 24 hours. Also, do not take more than... in any one week**  
**Peidiwch â chymryd mwy na... mewn 24 awr. Hefyd, peidiwch â chymryd mwy na... mewn wythnos**  
 To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.
- 19 Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol**  
**Rhybudd:** Bydd y feddyginiaeth hon yn eich gwneud yn gysglyd. Os ydych yn dal i deimlo'n gysglyd drannoeth, peidiwch â gyrru, defnyddio offer llaw neu beiriannau. Peidiwch ag yfed alcohol  
 To be used on *preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night*. On the rare occasions when hypnotics are prescribed for daytime administration (e.g. nitrazepam in epilepsy), this label would clearly not be appropriate. Also to be used as an *alternative to the label 2 wording* (the choice being at the discretion of the pharmacist) for *anxiolytics prescribed to be taken at night*.  
 It is hoped that this wording will convey adequately the problem of residual morning sedation after taking 'sleeping tablets'.
- 21 Take with or just after food, or a meal**  
**Cymerwch gyda neu ar ôl bwyd**  
 To be used on *preparations that are liable to cause gastric irritation, or those that are better absorbed with food*.  
 Patients should be advised that a small amount of food is sufficient.
- 22 Take 30 to 60 minutes before food**  
**Cymerwch 30 i 60 munud cyn bwyd**  
 To be used on some preparations *whose absorption is thereby improved*.  
 Most oral antibacterials require label 23 instead (see below).
- 23 Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food**  
**Cymerwch y feddyginiaeth hon ar stumog wag. Mae hyn yn golygu awr cyn, neu 2 awr ar ôl bwyd**  
 To be used on *oral antibacterials whose absorption may be reduced by the presence of food and acid in the stomach*.
- 24 Suck or chew this medicine**  
**Bydd angen cnoi neu sugno'r feddyginiaeth hon**  
 To be used on *preparations that should be sucked or chewed*.  
 The pharmacist should use discretion as to which of these words is appropriate.
- 25 Swallow this medicine whole. Do not chew or crush**  
**Llyncwch yn gyfan. Peidiwch â chnoi neu falu'n fân**  
 To be used on *preparations that are enteric-coated or designed for modified-release*.  
 Also to be used on *preparations that taste very unpleasant or may damage the mouth if not swallowed whole*.  
 Patients should be advised (where relevant) that some modified-release preparations can be broken in half, but that the halved tablet should still be swallowed whole, and not chewed or crushed.
- 26 Dissolve this medicine under your tongue**  
**Gadewch i'r feddyginiaeth hon doddi o dan y tafod**  
 To be used on *preparations designed for sublingual use*. Patients should be advised to hold under the tongue and avoid swallowing until dissolved. The buccal mucosa between the gum and cheek is occasionally specified by the prescriber.
- 27 Take with a full glass of water**  
**Cymerwch gyda llond gwydr o ddŵr**  
 To be used on *preparations that should be well diluted* (e.g. chloral hydrate), where a high fluid intake is required (e.g. sulfonamides), or where water is required to aid the action (e.g. methylcellulose). The patient should be advised that 'a full glass' means at least 150 mL. In most cases fruit juice, tea, or coffee may be used.
- 28 Spread thinly on the affected skin only**  
**Taenwch yn denau ar y croen sydd wedi'i effeithio yn unig**  
 To be used on *external preparations* that should be applied sparingly (e.g. corticosteroids, dithranol).
- 29 Do not take more than 2 at any one time. Do not take more than 8 in 24 hours**  
**Peidiwch â chymryd mwy na 2 ar unrhyw un adeg. Peidiwch â chymryd mwy nag 8 mewn 24 awr**  
 To be used on containers of dispensed *solid dose preparations containing paracetamol for adults when the instruction on the label indicates that the dose can be taken on an 'as required' basis*. The dose form should be specified, e.g. tablets or capsules.  
 This label has been introduced because of the serious consequences of overdosage with paracetamol.
- 30 Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well**  
**Yn cynnwys paracetamol. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys paracetamol tra'n cymryd y feddyginiaeth hon. Siaradwch gyda'ch meddyg ar unwaith os ydych yn cymryd gormod, hyd yn oed os ydych yn teimlo'n iawn**  
 To be used on all containers of dispensed *preparations containing paracetamol*.
- 31 Contains aspirin. Do not take anything else containing aspirin while taking this medicine**  
**Yn cynnwys aspirin. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys aspirin tra'n cymryd y feddyginiaeth hon**  
 To be used on containers of dispensed *preparations containing aspirin when the name on the label does not include the word 'aspirin'*.

Graduated compression hosiery	1682
Lymphoedema garments	1682

The correct dressing for wound management depends not only on the type of wound but also on the stage of the healing process. The principal stages of healing are: cleansing, removal of debris; granulation, vascularisation; epithelialisation. The ideal dressing for moist wound healing needs to ensure that the wound remains: moist with exudate, but not macerated; free of clinical infection and excessive slough; free of toxic chemicals, particles or fibres; at the optimum temperature for healing; undisturbed by the need for frequent changes; at the optimum pH value. As wound healing passes through its different stages, different types of dressings may be required to satisfy better one or other of these requirements. Under normal circumstances, a moist environment is a necessary part of the wound healing process; exudate provides a moist environment and promotes healing, but excessive exudate can cause maceration of the wound and surrounding healthy tissue. The volume and viscosity of exudate changes as the wound heals. There are certain circumstances where moist wound healing is not appropriate (e.g. gangrenous toes associated with vascular disease).

Advanced wound dressings are designed to control the environment for wound healing, for example to donate fluid (hydrogels), maintain hydration (hydrocolloids), or to absorb wound exudate (alginates, foams).

Practices such as the use of irritant cleansers and desloughing agents may be harmful and are largely obsolete; removal of debris and dressing remnants should need minimal irrigation with lukewarm sterile sodium chloride 0.9% solution or water.

Hydrogel, hydrocolloid, and medical grade honey dressings can be used to deslough wounds by promoting autolytic

debridement; there is insufficient evidence to support any particular method of debridement for difficult-to-heal surgical wounds. Sterile larvae (maggots) are also available for biosurgical removal of wound debris.

There have been few clinical trials able to establish a clear advantage for any particular product. The choice between different dressings depends not only on the type and stage of the wound, but also on patient preference or tolerance, site of the wound, and cost. For further information, see *Buyers' Guide: Advanced wound dressings* (October 2008); NHS Purchasing and Supply Agency, Centre for Evidence-based Purchasing.

Prices quoted in Appendix 4 are basic NHS net prices; for further information see *Prices in the BNF* under How to use the BNF.

The table below gives suggestions for choices of primary dressing depending on the type of wound (a secondary dressing may be needed in some cases).

### Basic wound contact dressings

#### Low adherence dressing

Low adherence dressings are used as interface layers under secondary absorbent dressings. Placed directly on the wound bed, non-absorbent, low adherence dressings are suitable for clean, granulating, lightly exuding wounds without necrosis, and protect the wound bed from direct contact with secondary dressings. Care must be taken to avoid granulation tissue growing into the weave of these dressings. Tulle dressings are manufactured from cotton or viscose fibres which are impregnated with white or yellow soft paraffin to prevent the fibres from sticking, but this is only partly successful and it may be necessary to change the

Alginate with honey p. 1670  
Alginate with silver p. 1671

**Note** In each section of this table the dressings are listed in order of increasing absorbency.  
Some wound contact (primary) dressings require a secondary dressing

dressings frequently. The paraffin reduces absorbency of the dressing. Dressings with a reduced content (light loading) of soft paraffin are less liable to interfere with absorption; dressings with 'normal loading' (such as Jelonet<sup>®</sup>) have been used for skin graft transfer. Knitted viscose primary dressing is an alternative to tulle dressings for exuding wounds; it can be used as the initial layer of multi-layer compression bandaging in the treatment of venous leg ulcers.

**Knitted polyester primary dressing****Atrauman**

Non-adherent knitted polyester primary dressing impregnated with neutral triglycerides

**Atrauman dressing** (Paul Hartmann Ltd) 10cm × 20cm= £0.82, 20cm × 30cm= £2.25, 5cm × 5cm= £0.35, 7.5cm × 10cm= £0.36

**Knitted viscose primary dressing****N-A Dressing**

Warp knitted fabric manufactured from a bright viscose monofilament.

**N-A dressing** (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.67, 9.5cm × 9.5cm= £0.35

**N-A Ultra**

Warp knitted fabric manufactured from a bright viscose monofilament.

**N-A Ultra dressing** (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.64, 9.5cm × 9.5cm= £0.34

**Profore**

Warp knitted fabric manufactured from a bright viscose monofilament.

**Profore** (Smith & Nephew Healthcare Ltd) wound contact layer 14cm × 20cm= £0.33

**Tricotex**

Warp knitted fabric manufactured from a bright viscose monofilament.

**Tricotex dressing** (Smith & Nephew Healthcare Ltd) 9.5cm × 9.5cm= £0.36

**Paraffin Gauze Dressing****Cuticell**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

**Cuticell** (BSN medical Ltd) Classic dressing 10cm × 10cm= £0.30

**Jelonet**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

**Jelonet** (Smith & Nephew Healthcare Ltd) dressing 10cm × 10cm= £0.43

**Neotulle**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

**Neotulle** (Neomedic Ltd) dressing 10cm × 10cm= £0.29

## Absorbent dressings

Perforated film absorbent dressings are suitable only for wounds with mild to moderate amounts of exudate; they are not appropriate for leg ulcers or for other lesions that produce large quantities of viscous exudate. Dressings with an absorbent cellulose or polymer wadding layer are suitable for use on moderately to heavily exuding wounds.

### Absorbent cellulose dressing

#### CelluDress

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**CelluDress dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.19, 10cm × 15cm= £0.20, 10cm × 20cm= £0.22, 15cm × 20cm= £0.30, 20cm × 25cm= £0.40, 20cm × 30cm= £0.85

#### Eclipse

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**Eclipse** (Advancis Medical) Boot dressing 60cm × 70cm= £14.24, dressing 15cm × 15cm= £1.00, 20cm × 30cm= £2.21, 60cm × 40cm= £8.42

#### Exu-Dry

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**Exu-Dry dressing** (Smith & Nephew Healthcare Ltd) 10cm × 15cm= £1.19, 15cm × 23cm= £2.42, 23cm × 38cm= £5.62

#### Mesorb

Cellulose wadding pad with gauze wound contact layer and non-woven repellent backing

**Mesorb dressing** (Molnlycke Health Care Ltd) 10cm × 10cm= £0.64, 10cm × 15cm= £0.84, 10cm × 20cm= £1.03, 15cm × 20cm= £1.47, 20cm × 25cm= £2.32, 20cm × 30cm= £2.63

#### Zetuvit E

Absorbent Cellulose Dressing with Fluid Repellent Backing; sterile or non-sterile

**Zetuvit** (Paul Hartmann Ltd) E non-sterile dressing 10cm × 10cm= £0.07, 10cm × 20cm= £0.09, 20cm × 20cm= £0.15, 20cm × 40cm= £0.29, sterile dressing 10cm × 10cm= £0.22, 10cm × 20cm= £0.26, 20cm × 20cm= £0.41, 20cm × 40cm= £1.15

### Absorbent perforated dressing

#### Adpore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Adpore dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.10, 10cm × 15cm= £0.16, 10cm × 20cm= £0.30, 10cm × 25cm= £0.34, 10cm × 30cm= £0.42, 10cm × 35cm= £0.50, 7cm × 8cm= £0.08

#### Cosmopore E

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Cosmopor E dressing** (Paul Hartmann Ltd) 10cm × 20cm= £0.47, 10cm × 25cm= £0.58, 10cm × 35cm= £0.81, 5cm × 7.2cm= £0.08, 8cm × 10cm= £0.18, 8cm × 15cm= £0.29

#### Cutiplast Steril

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Cutiplast Steril dressing** (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.32, 10cm × 25cm= £0.33, 10cm × 30cm= £0.45, 8cm × 10cm= £0.11, 8cm × 15cm= £0.26

#### Leukomed

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Leukomed dressing** (BSN medical Ltd) 10cm × 20cm= £0.45, 10cm × 25cm= £0.50, 10cm × 30cm= £0.65, 10cm × 35cm= £0.75, 5cm × 7.2cm= £0.09, 8cm × 10cm= £0.19, 8cm × 15cm= £0.34

#### Medipore + Pad

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Medipore + Pads dressing** (3M Health Care Ltd) 10cm × 10cm= £0.16, 10cm × 15cm= £0.25, 10cm × 20cm= £0.38, 10cm × 25cm= £0.47, 10cm × 35cm= £0.65, 5cm × 7.2cm= £0.08

#### Medisafe

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Medisafe dressing** (Neomedic Ltd) 6cm × 8cm= £0.08, 8cm × 10cm= £0.13, 8cm × 12cm= £0.23, 9cm × 15cm= £0.29, 9cm × 20cm= £0.34, 9cm × 25cm= £0.36

#### Mepore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Mepore dressing** (Molnlycke Health Care Ltd) 10cm × 11cm= £0.22, 11cm × 15cm= £0.37, 7cm × 8cm= £0.11, 9cm × 20cm= £0.45, 9cm × 25cm= £0.62, 9cm × 30cm= £0.71, 9cm × 35cm= £0.78

#### PremierPore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**PremierPore dressing** (Shermond) 10cm × 10cm= £0.12, 10cm × 15cm= £0.18, 10cm × 20cm= £0.32, 10cm × 25cm= £0.36, 10cm × 30cm= £0.45, 10cm × 35cm= £0.52, 5cm × 7cm= £0.05

#### Primapore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Primapore dressing** (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.46, 10cm × 25cm= £0.52, 10cm × 30cm= £0.66, 10cm × 35cm= £1.01, 6cm × 8.3cm= £0.19, 8cm × 10cm= £0.20, 8cm × 15cm= £0.35

#### Softpore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Softpore dressing** (Richardson Healthcare Ltd) 10cm × 10cm= £0.13, 10cm × 15cm= £0.20, 10cm × 20cm= £0.35, 10cm × 25cm= £0.40, 10cm × 30cm= £0.49, 10cm × 35cm= £0.58, 6cm × 7cm= £0.06

#### Telfa Island

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

### Absorbent perforated plastic film faced dressing

#### AbsoPad

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**AbsoPad dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.13, 20cm × 10cm= £0.28

#### Askina Pad

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Askina** (B.Braun Medical Ltd) Pad dressing 10cm × 10cm= £0.22

#### Melolin

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Melolin dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £0.29, 20cm × 10cm= £0.56, 5cm × 5cm= £0.18

#### Skintact

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Skintact dressing** (Robinson Healthcare) 10cm × 10cm= £0.17, 20cm × 10cm= £0.34, 5cm × 5cm= £0.10

#### Solvaline N

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Solvaline N dressing** (Lohmann & Rauscher) 10cm × 10cm= £0.19, 20cm × 10cm= £0.37, 5cm × 5cm= £0.10

#### Telfa

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Telfa dressing** (H & R Healthcare Ltd) 10cm × 7.5cm= £0.16, 15cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.29, 7.5cm × 5cm= £0.12

*Super absorbent cellulose and polymer primary dressing***Curea P1**

Super absorbent cellulose and polymer primary dressing.

**Curea P1 dressing** (Charles S. Bullen Stomacare Ltd) 10cm × 10cm square= £2.17, 10cm × 20cm rectangular= £3.67, 10cm × 30cm rectangular= £5.25, 12cm × 12cm square= £2.67, 20cm × 20cm square= £6.95, 20cm × 30cm rectangular= £10.11, 7.5cm × 7.5cm square= £1.73

**Curea P2**

Super absorbent cellulose and polymer primary dressing (non-adherent)

**Curea P2 dressing** (Charles S. Bullen Stomacare Ltd) 10cm × 20cm rectangular= £4.53, 11cm × 11cm square= £2.49, 20cm × 20cm square= £7.88, 20cm × 30cm rectangular= £10.68

**Cutisorb Ultra**

Super absorbent cellulose and polymer primary dressing

**Cutisorb Ultra dressing** (BSN medical Ltd) 10cm × 10cm square= £2.13, 10cm × 20cm rectangular= £3.56, 20cm × 20cm square= £6.68, 20cm × 30cm rectangular= £10.06

**DryMax Extra**

Super absorbent cellulose and polymer primary dressing

**DryMax Extra Soft dressing** (Espere Healthcare Ltd) 10cm × 10cm square= £0.87, 10cm × 20cm rectangular= £1.04, 20cm × 20cm square= £1.84, 20cm × 30cm rectangular= £2.33

**ELECT Superabsorber**

Super absorbent cellulose and polymer primary dressing

**Zetuvit Plus**

Super absorbent cellulose primary dressing

**Zetuvit Plus dressing** (Paul Hartmann Ltd) 10cm × 10cm= £0.85, 10cm × 20cm= £1.17, 15cm × 20cm= £1.35, 20cm × 25cm= £1.84, 20cm × 40cm= £2.84

*Super absorbent hydroconductive dressing***Drawtex**

Super absorbent hydroconductive dressing with absorbent, cross-action structures of viscose, polyester and cotton

**Drawtex dressing** (Martindale Pharmaceuticals Ltd) 10cm × 1.3m= £16.00, 10cm × 10cm= £2.24, 10cm × 1m= £16.00, 15cm × 20cm= £6.00, 20cm × 1m= £25.00, 20cm × 20cm= £6.98, 5cm × 5cm= £0.95, 7.5cm × 1m= £15.50, 7.5cm × 7.5cm= £1.77

**Advanced wound dressings**

Advanced wound dressings can be used for both acute and chronic wounds. Categories for dressings in this section start with the least absorptive, moisture-donating hydrogel dressings, followed by increasingly more absorptive dressings. These dressings are classified according to their primary component; some dressings are comprised of several components.

**Hydrogel dressings**

Hydrogel dressings are most commonly supplied as an amorphous, cohesive topical application that can take up the shape of a wound. A secondary, non-absorbent dressing is needed. These dressings are generally used to donate liquid to dry sloughy wounds and facilitate autolytic debridement of necrotic tissue; some also have the ability to absorb very small amounts of exudate. Hydrogel products that do not contain propylene glycol should be used if the wound is to be treated with larval therapy. Hydrogel sheets have a fixed structure and limited fluid-handling capacity; hydrogel sheet dressings are best avoided in the presence of infection, and are unsuitable for heavily exuding wounds.

*Hydrogel application (amorphous)***ActivHeal Hydrogel**

Hydrogel containing guar gum and propylene glycol

**ActivHeal** (Advanced Medical Solutions Ltd) Hydrogel dressing= £1.41

**Aquaform**

Hydrogel containing modified starch copolymer

**Askina Gel**

Hydrogel containing modified starch and glycerol

**Cutimed**

Hydrogel

**Cutimed** (BSN medical Ltd) Gel dressing= £3.13

**Flexigran**

Hydrogel containing modified starch and glycerol

**Flexigran** (A1 Pharmaceuticals) Gel dressing= £1.90

**GranuGel**

Hydrogel containing carboxymethylcellulose, pectin and propylene glycol

**GranuGel** (ConvaTec Ltd) Hydrocolloid Gel dressing= £2.45

**Intrasite Gel**

Hydrogel containing modified carmellose polymer and propylene glycol

**IntraSite** (Smith & Nephew Healthcare Ltd) Gel dressing= £3.78

**Nu-Gel**

Hydrogel containing alginate and propylene glycol

**Nu-Gel** (Systagenix Wound Management Ltd) dressing= £2.13

**Purilon Gel**

Hydrogel containing carboxymethylcellulose and calcium alginate

**Purilon** (Coloplast Ltd) Gel dressing= £2.39

*Hydrogel sheet dressings***ActiFormCool**

Hydrogel dressing

**ActiFormCool sheet** (L&R Medical UK Ltd) 10cm × 10cm square= £2.77, 10cm × 15cm rectangular= £3.98, 20cm × 20cm square= £8.34, 5cm × 6.5cm rectangular= £1.89

**Aquafluo**

Hydrogel dressing

**Aquafluo** (Covidien (UK) Commercial Ltd) sheet 7.5cm discs= £2.60

**Coolie**

Hydrogel dressing (without adhesive border)

**Coolie** (Zeroderma Ltd) sheet 7cm discs= £1.96

**Gel FX**

Hydrogel dressing (without adhesive border)

**Gel FX sheet** (Synergy Health (UK) Ltd) 10cm × 10cm square= £1.60, 15cm × 15cm square= £3.20

**Geliperm**

Hydrogel sheets

**Geliperm** (Geistlich Sons Ltd) sheet 10cm × 10cm square= £2.53

**Hydrosorb**

Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film  
**Hydrosorb sheet** (Paul Hartmann Ltd) 10cm × 10cm square= £2.34, 20cm × 20cm square= £7.01, 5cm × 7.5cm rectangular= £1.64

**Hydrosorb Comfort**

Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film (with adhesive border, waterproof)

**Hydrosorb Comfort sheet** (Paul Hartmann Ltd) 12.5cm × 12.5cm square= £3.74, 4.5cm × 6.5cm rectangular= £1.94, 7.5cm × 10cm rectangular= £2.57

**Intrasite Conformable**

Soft non-woven dressing impregnated with Intrasite® gel  
**IntraSite Conformable dressing** (Smith & Nephew Healthcare Ltd)

10cm × 10cm square= £1.90, 10cm × 20cm rectangular= £2.56, 10cm × 40cm rectangular= £4.58

**Novogel**

Glycerol-based hydrogel sheets (standard or thin)

**Novogel sheet** (Ford Medical Associates Ltd) 10cm × 10cm square= £3.18, 15cm × 20cm rectangular= £6.07, 20cm × 40cm rectangular= £11.56, 30cm × 30cm (0.15cm thickness) square= £12.71, (0.30cm thickness) square= £13.47, 5cm × 7.5cm rectangular= £1.99, 7.5cm diameter circular= £5.84

**SanoSkin NET**

Hydrogel sheet (without adhesive border)

**SanoSkin** (Ideal Medical Solutions Ltd) NET sheet 8.5cm × 12cm rectangular= £2.28

**Vacunet**

Non-adherent, hydrogel coated polyester net dressing

**Vacunet dressing** (Protex Healthcare Ltd) 10cm × 10cm square= £1.93, 10cm × 15cm rectangular= £2.86

#### *Sodium hyaluronate dressings*

The hydrating properties of sodium hyaluronate promote wound healing, and dressings can be applied directly to the wound, or to a primary dressing (a secondary dressing should also be applied). The iodine and potassium iodide in these dressings prevent the bacterial decay of sodium hyaluronate in the wound.

**Hiodine®** should be used with caution in thyroid disorders.

#### **Hiodine**

Sodium hyaluronate 1.5%, potassium iodide 0.15%, iodine 0.1%, in a viscous solution

#### **Vapour-permeable films and membranes**

Vapour-permeable films and membranes allow the passage of water vapour and oxygen but are impermeable to water and micro-organisms, and are suitable for lightly exuding wounds. They are highly conformable, provide protection, and a moist healing environment; transparent film dressings permit constant observation of the wound. Water vapour loss can occur at a slower rate than exudate is generated, so that fluid accumulates under the dressing, which can lead to tissue maceration and to wrinkling at the adhesive contact site (with risk of bacterial entry). Newer versions of these dressings have increased moisture vapour permeability. Despite these advances, vapour-permeable films and membranes are unsuitable for infected, large heavily exuding wounds, and chronic leg ulcers. Vapour-permeable films and membranes are suitable for partial-thickness wounds with minimal exudate, or wounds with eschar. Most commonly, they are used as a secondary dressing over alginates or hydrogels; film dressings can also be used to protect the fragile skin of patients at risk of developing minor skin damage caused by friction or pressure.

*Non-woven fabric dressing with viscose-rayon pad.*

#### **Niko Fix**

For intravenous and subcutaneous catheter sites

**Niko** (Unomedical Ltd) Fix dressing 7cm × 8.5cm= £0.20

#### *Vapour-permeable Adhesive Film Dressing (Semi-permeable Adhesive Dressing)*

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces.

#### **Askina Derm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Askina Derm dressing** (B.Braun Medical Ltd) 10cm × 12cm= £1.13, 10cm × 20cm= £2.14, 15cm × 20cm= £2.59, 20cm × 30cm= £4.64, 6cm × 7cm= £0.39

#### **C-View**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

#### **Dressfilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Dressfilm** (St Georges Medical Ltd) dressing 15cm × 20cm= £1.90

#### **Hydrofilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Hydrofilm dressing** (Paul Hartmann Ltd) 10cm × 12.5cm= £0.44, 10cm × 15cm= £0.55, 10cm × 25cm= £0.85, 12cm × 25cm= £0.90, 15cm × 20cm= £1.01, 20cm × 30cm= £1.67, 6cm × 7cm= £0.24

#### **Hypafix Transparent**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Hypafix Transparent** (BSN medical Ltd) dressing 10cm × 2m= £9.03

#### **Leukomed T**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Leukomed T dressing** (BSN medical Ltd) 10cm × 12.5cm= £1.06, 11cm × 14cm= £1.29, 15cm × 20cm= £2.46, 15cm × 25cm= £2.63, 7.2cm × 5cm= £0.39, 8cm × 10cm= £0.73

#### **Mepitel Film**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Mepitel Film dressing** (Molnlycke Health Care Ltd) 10.5cm × 12cm= £1.36, 10.5cm × 25cm= £2.63, 15.5cm × 20cm= £3.34, 6.5cm × 7cm= £0.50

#### **Mepore Film**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Mepore Film dressing** (Molnlycke Health Care Ltd) 10cm × 12cm= £1.27, 10cm × 25cm= £2.47, 15cm × 20cm= £3.14, 6cm × 7cm= £0.47

#### **OpSite Flexifix**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**OpSite Flexifix dressing** (Smith & Nephew Healthcare Ltd) 10cm × 1m= £6.94, 5cm × 1m= £4.12

#### **OpSite Flexigrid**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**OpSite Flexigrid dressing** (Smith & Nephew Healthcare Ltd) 12cm × 12cm= £1.19, 15cm × 20cm= £3.00, 6cm × 7cm= £0.42

#### **Polyskin II**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Kendall Film dressing** (H & R Healthcare Ltd) 10cm × 12cm= £1.03, 10cm × 20cm= £2.04, 15cm × 20cm= £2.35, 20cm × 25cm= £4.11, 4cm × 4cm= £0.36, 5cm × 7cm= £0.40

#### **ProtectFilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**ProtectFilm dressing** (Wallace, Cameron & Company Ltd) 10cm × 12cm= £0.20, 15cm × 20cm= £0.40, 6cm × 7cm= £0.11

#### **Suprasorb F**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Suprasorb F dressing** (Lohmann & Rauscher) 10cm × 12cm= £0.83, 15cm × 20cm= £2.58, 5cm × 7cm= £0.34

#### **Tegaderm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Tegaderm Film dressing** (3M Health Care Ltd) 12cm × 12cm= £1.13, 15cm × 20cm= £2.44, 6cm × 7cm= £0.39

#### **Tegaderm diamond**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Tegaderm Diamond dressing** (3M Health Care Ltd) 10cm × 12cm= £1.23, 6cm × 7cm= £0.45

**Vellafilm**

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

**Vellafilm dressing** (Advancis Medical) 12cm × 12cm= £1.14, 12cm × 35cm= £2.84, 15cm × 20cm= £2.17

**Vapour-permeable Adhesive Film Dressing with absorbent pad Adpore Ultra**

Film dressing with absorbent pad

**Adpore Ultra dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.14, 10cm × 15cm= £0.22, 10cm × 20cm= £0.33, 10cm × 25cm= £0.35, 10cm × 30cm= £0.52, 7cm × 8cm= £0.12

**Vapour-permeable Adhesive Film Dressing with adsorbent pad Alldress**

Film dressing with adsorbent pad

**Alldress dressing** (Molnlycke Health Care Ltd) 10cm × 10cm= £0.99, 15cm × 15cm= £2.17, 15cm × 20cm= £2.68

**C-View Post-Op**

Film dressing with adsorbent pad

**Clearpore**

Film dressing with adsorbent pad

**Clearpore dressing** (Richardson Healthcare Ltd) 10cm × 10cm= £0.20, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm= £0.40, 10cm × 30cm= £0.65, 6cm × 10cm= £0.15, 6cm × 7cm= £0.12

**Hydrofilm Plus**

Film dressing with adsorbent pad

**Hydrofilm Plus dressing** (Paul Hartmann Ltd) 10cm × 20cm= £0.48, 10cm × 25cm= £0.63, 10cm × 30cm= £0.72, 7.2cm × 5cm= £0.18, 9cm × 10cm= £0.28, 9cm × 15cm= £0.31

**Leukomed T Plus**

Film dressing with adsorbent pad

**Leukomed T Plus dressing** (BSN medical Ltd) 10cm × 20cm= £1.40, 10cm × 25cm= £1.57, 10cm × 30cm= £2.63, 10cm × 35cm= £3.19, 7.2cm × 5cm= £0.28, 8cm × 10cm= £0.56, 8cm × 15cm= £0.84

**Mepore Film & Pad**

Film dressing with adsorbent pad

**Mepore Film & Pad dressing** (Molnlycke Health Care Ltd) 4cm × 5cm= £0.25, 5cm × 7cm= £0.25, 9cm × 10cm= £0.64, 9cm × 15cm= £0.94, 9cm × 20cm= £1.41, 9cm × 25cm= £1.55, 9cm × 30cm= £2.08, 9cm × 35cm= £2.58

**Mepore Ultra**

Film dressing with adsorbent pad

**Mepore Ultra dressing** (Molnlycke Health Care Ltd) 10cm × 11cm= £0.83, 11cm × 15cm= £1.22, 7cm × 8cm= £0.42, 9cm × 20cm= £1.56, 9cm × 25cm= £1.72, 9cm × 30cm= £2.84

**OpSite Plus**

Film dressing with adsorbent pad

**OpSite Plus dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.26, 10cm × 20cm= £2.12, 10cm × 35cm= £3.52, 6.5cm × 5cm= £0.34, 8.5cm × 9.5cm= £0.93

**OpSite Post-op**

Film dressing with adsorbent pad

**OpSite Post-Op dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.24, 10cm × 20cm= £2.08, 10cm × 25cm= £2.62, 10cm × 30cm= £3.10, 10cm × 35cm= £3.45, 8.5cm × 15.5cm= £1.26, 8.5cm × 9.5cm= £0.91

**Pharmapore-PU**

Film dressing with adsorbent pad

**Pharmapore-PU dressing** (Wallace, Cameron & Company Ltd) 10cm × 25cm= £0.38, 10cm × 30cm= £0.58, 8.5cm × 15.5cm= £0.20

**PremierPore VP**

Film dressing with adsorbent pad

**PremierPore VP dressing** (Shermond) 10cm × 10cm= £0.16, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm= £0.38, 10cm × 30cm= £0.57, 10cm × 35cm= £0.70, 5cm × 7cm= £0.13

**Tegaderm**

Film dressing with adsorbent pad

**Tegaderm + Pad dressing** (3M Health Care Ltd) 5cm × 7cm= £0.26, 9cm × 10cm= £0.66, 9cm × 15cm= £0.97, 9cm × 20cm= £1.42, 9cm × 25cm= £1.60, 9cm × 35cm= £2.65

**Tegaderm Absorbent Clear**

Film dressing with clear acrylic polymer oval-shaped pad or rectangular-shaped pad

**Tegaderm Absorbent Clear Acrylic dressing** (3M Health Care Ltd) 11.1cm × 12.7cm oval= £4.18, 14.2cm × 15.8cm oval= £5.89, 14.9cm × 15.2cm rectangular= £8.83, 20cm × 20.3cm rectangular= £14.17, 7.6cm × 9.5cm oval= £3.23

*Vapour-permeable transparent film dressing with adhesive foam border.*

**Central Gard**

For intravenous and subcutaneous catheter sites

**Central Gard dressing** (Unomedical Ltd) 16cm × 7cm= £0.99, 16cm × 8.8cm= £1.08

**Easi-V**

For intravenous and subcutaneous catheter sites

**Easi-V** (Convatec Ltd) dressing 7cm × 7.5cm= £0.38

*Vapour-permeable transparent, adhesive film dressing.*

**Hydrofilm I.V. Control**

For intravenous and subcutaneous catheter sites

**Hydrofilm** (Paul Hartmann Ltd) I.V. Control dressing 7cm × 9cm= £0.32

*Vapour-permeable, transparent, adhesive film dressing.*

**IV3000**

For intravenous and subcutaneous catheter sites

**IV3000 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.47, 5cm × 6cm= £0.44, 6cm × 7cm= £0.59, 7cm × 9cm= £0.77, 9cm × 12cm= £1.53

**Mepore IV**

For intravenous and subcutaneous catheter sites

**Mepore IV dressing** (Molnlycke Health Care Ltd) 10cm × 11cm= £1.11, 5cm × 5.5cm= £0.32, 8cm × 9cm= £0.41

**Pharmapore-PU IV**

For intravenous and subcutaneous catheter sites

**Pharmapore-PU-IV dressing** (Wallace, Cameron & Company Ltd) 6cm × 7cm= £0.08, 7cm × 8.5cm= £0.07, 7cm × 9cm= £0.17

**Tegaderm IV**

For intravenous and subcutaneous catheter sites

**Tegaderm IV Advanced dressing with securing tapes** (3M Health Care Ltd) 10cm × 15.5cm= £1.68, 7cm × 8.5cm= £0.60

**Soft polymer dressings**

Dressings with soft polymer, often a soft silicone polymer, in a non-adherent or gently adherent layer are suitable for use on lightly to moderately exuding wounds. For moderately to heavily exuding wounds, an absorbent secondary dressing can be added, or a soft polymer dressing with an absorbent pad can be used. Wound contact dressings coated with soft silicone have gentle adhesive properties and can be used on fragile skin areas or where it is beneficial to reduce the frequency of primary dressing changes. Soft polymer dressings should not be used on heavily bleeding wounds; blood clots can cause the dressing to adhere to the wound surface. For silicone keloid dressings see under Specialised dressings.

**Cellulose dressings****Sorbion Sachet Border**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope, with adhesive border

**Cutimed Sorbion Sachet Border dressing** (BSN medical Ltd) 10cm × 10cm square= £3.06, 15cm × 15cm square= £4.66, 25cm × 15cm rectangular= £7.26

**Sorbion Sachet EXTRA**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope

**Cutimed Sorbion Sachet Extra dressing** (BSN medical Ltd) 10cm × 10cm= £2.34, 20cm × 10cm= £3.88, 20cm × 20cm= £7.27, 30cm × 20cm= £10.37, 5cm × 5cm= £1.51, 7.5cm × 7.5cm= £1.85

**Sorbion Sachet Multi Star**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope  
**Cutimed Sorbion Sachet Multi Star dressing** (BSN medical Ltd) 14cm × 14cm= £5.08, 8cm × 8cm= £3.10

**Sorbion Sachet S Drainage**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope ('v' shaped dressing)  
**Cutimed** (BSN medical Ltd) Sorbion Sachet S drainage dressing 10cm × 10cm= £2.74

**Suprasorb X**

Biosynthetic cellulose fibre dressing  
**Suprasorb X dressing** (Lohmann & Rauscher) 14cm × 20cm rectangular= £8.77, 2cm × 21cm rope= £6.81, 5cm × 5cm square= £2.13, 9cm × 9cm square= £4.42

*With absorbent pad*

**Advazorb Border**

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border  
**Advazorb Border dressing** (Advancis Medical) 10cm × 10cm= £2.17, 10cm × 20cm= £3.00, 10cm × 30cm= £4.39, 12.5cm × 12.5cm= £2.67, 15cm × 15cm= £3.26, 20cm × 20cm= £5.64, 7.5cm × 7.5cm= £1.23

**Advazorb Border Lite**

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border  
**Advazorb Border Lite dressing** (Advancis Medical) 10cm × 10cm= £1.95, 10cm × 20cm= £2.70, 10cm × 30cm= £3.96, 12.5cm × 12.5cm= £2.40, 15cm × 15cm= £2.94, 20cm × 20cm= £5.08, 7.5cm × 7.5cm= £1.11

**Advazorb Silfix**

Soft silicone wound contact dressing with polyurethane foam film backing  
**Advazorb Silfix dressing** (Advancis Medical) 10cm × 10cm= £1.91, 10cm × 20cm= £3.29, 12.5cm × 12.5cm= £2.68, 15cm × 15cm= £3.47, 20cm × 20cm= £5.15, 7.5cm × 7.5cm= £1.02

**Advazorb Silfix Lite**

Soft silicone wound contact dressing with polyurethane foam film backing  
**Advazorb Silfix Lite dressing** (Advancis Medical) 10cm × 10cm= £1.73, 10cm × 20cm= £2.96, 12.5cm × 12.5cm= £2.41, 15cm × 15cm= £3.12, 20cm × 20cm= £4.63, 7.5cm × 7.5cm= £0.92

**Allevyn Gentle**

Soft gel wound contact dressing, with polyurethane foam film backing

**Allevyn Gentle Border**

Silicone gel wound contact dressing, with polyurethane foam film backing

**Allevyn Gentle Border** (Smith & Nephew Healthcare Ltd) Heel dressing 23cm × 23.2cm= £10.14, dressing 10cm × 10cm= £2.30, 12.5cm × 12.5cm= £2.82, 17.5cm × 17.5cm= £5.56, 7.5cm × 7.5cm= £1.57

**Allevyn Gentle Border Lite**

Silicone gel wound contact dressing, with polyurethane foam film backing

**Allevyn Gentle Border Lite dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £2.27, 15cm × 15cm= £4.01, 5.5cm × 12cm= £1.94, 5cm × 5cm= £0.94, 8cm × 15cm= £3.61

**Allevyn Life**

Soft silicone wound contact dressing, with central mesh screen, polyurethane foam film backing and adhesive border  
**Allevyn Life dressing** (Smith & Nephew Healthcare Ltd) 10.3cm × 10.3cm= £1.78, 12.9cm × 12.9cm= £2.61, 15.4cm × 15.4cm= £3.19, 21cm × 21cm= £6.29

**Cutimed Siltec**

Soft silicone wound contact dressing, with polyurethane foam film backing

**Cutimed Siltec** (BSN medical Ltd) Sacrum dressing 17.5cm × 17.5cm= £4.63, 23cm × 23cm= £6.32, dressing 10cm × 10cm= £2.30, 10cm × 20cm= £3.80, 15cm × 15cm= £4.30, 20cm × 20cm= £6.52, 5cm × 6cm= £1.23

**Cutimed Siltec B**

Soft silicone wound contact dressing, with polyurethane foam film backing, with adhesive border, for lightly to moderately exuding wounds

**Cutimed Siltec B dressing** (BSN medical Ltd) 12.5cm × 12.5cm= £2.34, 15cm × 15cm= £3.12, 17.5cm × 17.5cm= £5.04, 22.5cm × 22.5cm= £6.16, 7.5cm × 7.5cm= £1.38

**Cutimed Siltec L**

Soft silicone wound contact dressing, with polyurethane foam film backing, for lightly to moderately exuding wounds

**Cutimed Siltec L dressing** (BSN medical Ltd) 10cm × 10cm= £1.60, 15cm × 15cm= £3.52, 5cm × 6cm= £1.09

**Eclipse Adherent**

Soft silicone wound contact layer with absorbent pad and film backing

**Eclipse Adherent dressing** (Advancis Medical) 10cm × 10cm= £3.09, 10cm × 20cm= £3.88, 15cm × 15cm= £5.16, 20cm × 30cm= £10.33, 17cm × 19cm sacral= £3.89, 22cm × 23cm sacral= £6.44

**Flivasorb**

Absorbent polymer dressing with non-adherent wound contact layer

**Flivasorb Adhesive**

Absorbent polymer dressing with non-adherent wound contact layer and adhesive border

**Vliwasorb Adhesive dressing** (Lohmann & Rauscher) 12cm × 12cm square= £3.43, 15cm × 15cm square= £4.70

**Mepilex**

Absorbent soft silicone dressing with polyurethane foam film backing

**Mepilex** (Molnlycke Health Care Ltd) Heel dressing 13cm × 20cm= £5.63, 15cm × 22cm= £6.44, XT dressing 10cm × 11cm= £2.75, 11cm × 20cm= £4.54, 15cm × 15cm= £4.98, 20cm × 21cm= £7.52, dressing 5cm × 5cm= £1.25

**Mepilex Border**

Absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

**Mepilex Border** (Molnlycke Health Care Ltd) Heel dressing 18.5cm × 24cm= £6.70, Sacrum dressing 18cm × 18cm= £4.97, 23cm × 23cm= £8.11, dressing 10cm × 12.5cm= £2.76, 10cm × 20cm= £3.77, 10cm × 30cm= £5.66, 15cm × 17.5cm= £4.24, 17cm × 20cm= £6.16

**Mepilex Border Lite**

Thin absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

**Mepilex Border Lite dressing** (Molnlycke Health Care Ltd) 15cm × 15cm= £3.99, 4cm × 5cm= £0.94, 5cm × 12.5cm= £2.04, 7.5cm × 7.5cm= £1.37

**Mepilex Lite**

Thin absorbent soft silicone dressing with polyurethane foam film backing

**Mepilex Lite dressing** (Molnlycke Health Care Ltd) 10cm × 10cm= £2.23, 15cm × 15cm= £4.33, 20cm × 50cm= £27.32, 6cm × 8.5cm= £1.87

**Mepilex Transfer**

Soft silicone exudate transfer dressing

**Mepilex Transfer dressing** (Molnlycke Health Care Ltd) 10cm × 12cm= £3.63, 15cm × 20cm= £10.98, 20cm × 50cm= £28.07, 7.5cm × 8.5cm= £2.30

**Sorbion Sana**

Non-adherent polyethylene wound contact dressing with absorbent core

**Cutimed Sorbion Sana Gentle dressing** (BSN medical Ltd) 12cm × 12cm= £2.59, 12cm × 22cm= £4.66, 22cm × 22cm= £8.30, 8.5cm × 8.5cm= £2.07

**UrgotulDuo**

Non-adherent soft polymer wound contact dressing with absorbent pad

**UrgotulDuo dressing** (Urgo Ltd) 10cm × 12cm= £3.98, 15cm × 20cm= £9.25, 5cm × 10cm= £2.58

*Without absorbent pad*

#### **Adaptic Touch**

Non-adherent soft silicone wound contact dressing

**Adaptic Touch dressing** (Systagenix Wound Management Ltd) 12.7cm × 15cm= £4.65, 20cm × 32cm= £12.50, 5cm × 7.6cm= £1.13, 7.6cm × 11cm= £2.25

#### **Askina SiNet**

Soft silicone-coated wound contact dressing

**Askina SiNet dressing** (B.Braun Medical Ltd) 10cm × 18cm= £5.17, 20cm × 30cm= £12.66, 5cm × 7.5cm= £1.17, 7.5cm × 10cm= £2.37

#### **Mepitel**

Soft silicone, semi-transparent wound contact dressing

**Mepitel dressing** (Molnlycke Health Care Ltd) 12cm × 15cm= £5.65, 5cm × 7cm= £1.41, 8cm × 10cm= £2.82

#### **Mepitel One**

Soft silicone, thin, transparent wound contact dressing

**Mepitel One dressing** (Molnlycke Health Care Ltd) 13cm × 15cm= £4.98, 24cm × 27.5cm= £14.25, 6cm × 7cm= £1.22, 9cm × 10cm= £2.41

#### **Physiutulle**

Non-adherent soft polymer wound contact dressing

**Physiutulle dressing** (Coloplast Ltd) 10cm × 10cm= £2.38, 15cm × 20cm= £7.25

#### **Silflex**

Soft silicone-coated polyester wound contact dressing

**Silflex dressing** (Advancis Medical) 12cm × 15cm= £4.74, 20cm × 30cm= £12.19, 35cm × 60cm= £40.88, 5cm × 7cm= £1.15, 8cm × 10cm= £2.35

#### **Silon-TSR**

Soft silicone polymer wound contact dressing

**Silon-TSR dressing** (Bio Med Sciences) 13cm × 13cm= £3.52, 13cm × 25cm= £5.47, 28cm × 30cm= £7.37

#### **Sorborion Contact**

Non-adherent soft polymer wound contact dressing

**Cutimed Sorborion Contact dressing** (BSN medical Ltd) 10cm × 10cm= £2.07, 10cm × 20cm= £4.14, 20cm × 20cm= £7.26, 20cm × 30cm= £10.37, 7.5cm × 7.5cm= £1.55

#### **Tegaderm Contact**

Non-adherent soft polymer wound contact dressing

**Tegaderm Contact dressing** (3M Health Care Ltd) 20cm × 25cm= £11.06, 7.5cm × 10cm= £2.32

#### **Urgotul**

Non-adherent soft polymer wound contact dressing

**Urgotul dressing** (Urgo Ltd) 10cm × 10cm= £3.13, 10cm × 40cm= £10.53, 15cm × 15cm= £6.66, 15cm × 20cm= £8.86, 20cm × 30cm= £14.25, 5cm × 5cm= £1.57

#### **Hydrocolloid dressings**

Hydrocolloid dressings are usually presented as a hydrocolloid layer on a vapour-permeable film or foam pad. Semi-permeable to water vapour and oxygen, these dressings form a gel in the presence of exudate to facilitate rehydration in lightly to moderately exuding wounds and promote autolytic debridement of dry, sloughy, or necrotic wounds; they are also suitable for promoting granulation. Hydrocolloid-fibrous dressings made from modified carmellose fibres resemble alginate dressings; hydrocolloid-fibrous dressings are more absorptive and suitable for moderately to heavily exuding wounds.

#### **Hydrocolloid-fibrous dressings**

##### **Aquacel**

Soft non-woven pad containing hydrocolloid-fibres

**Aquacel** (ConvaTec Ltd) Ribbon dressing 1cm × 45cm= £1.91, 2cm × 45cm= £2.58, dressing 10cm × 10cm square= £2.55, 15cm × 15cm square= £4.79, 4cm × 10cm rectangular= £1.37, 4cm × 20cm rectangular= £2.02, 4cm × 30cm rectangular= £3.04, 5cm × 5cm square= £1.07

##### **Aquacel Foam**

Soft non-woven pad containing hydrocolloid-fibres with foam layer; with or without adhesive border

**Aquacel Foam dressing (adhesive)** (ConvaTec Ltd) 10cm × 10cm=

£2.25, 12.5cm × 12.5cm= £2.79, 17.5cm × 17.5cm= £5.58, 19.8cm × 14cm heel= £5.71, 20cm × 16.9cm sacral= £5.12, 21cm × 21cm= £8.17, 25cm × 30cm= £10.58, 8cm × 8cm= £1.45, (**non-adhesive**) 10cm × 10cm= £2.66, 15cm × 15cm= £4.48, 15cm × 20cm= £6.12, 20cm × 20cm= £7.30

##### **UrgoClean Pad**

Pad, hydrocolloid fibres coated with soft-adherent lipo-colloidal wound contact layer

**UrgoClean Pad dressing** (Urgo Ltd) 10cm × 10cm square= £2.21, 20cm × 15cm rectangular= £4.16, 6cm × 6cm square= £0.99

##### **UrgoClean Rope**

Rope, non-woven rope containing hydrocolloid fibres

**UrgoClean rope dressing** (Urgo Ltd) 2.5cm × 40cm= £2.49, 5cm × 40cm= £3.29

#### **Polyurethane matrix dressing**

##### **Cutinova Hydro**

Polyurethane matrix with absorbent particles and waterproof polyurethane film

**Cutinova Hydro dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £2.68, 15cm × 20cm rectangular= £5.66, 5cm × 6cm rectangular= £1.33

#### **With adhesive border**

##### **Biatain Super**

Semi-permeable hydrocolloid dressing; without adhesive border

**Biatain Super dressing (adhesive)** (Coloplast Ltd) 10cm × 10cm square= £2.26, 12.5cm × 12.5cm square= £3.73, 12cm × 20cm rectangular= £3.74, 15cm × 15cm square= £4.50, 20cm × 20cm square= £7.02

##### **Granuflex Bordered**

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

**Granuflex Bordered dressing** (ConvaTec Ltd) 10cm × 10cm square= £3.51, 10cm × 13cm triangular= £4.14, 15cm × 15cm square= £6.69, 15cm × 18cm triangular= £6.45, 6cm × 6cm square= £1.85

##### **Hydrocol Border**

Hydrocolloid dressing with adhesive border and absorbent wound contact pad

**Hydrocol Border (bevelled edge) dressing** (Paul Hartmann Ltd) 10cm × 10cm square= £2.52, 12cm × 18cm sacral= £3.77, 15cm × 15cm square= £4.73, 5cm × 5cm square= £1.05, 7.5cm × 7.5cm square= £1.73, 8cm × 12cm concave= £2.22

##### **Tegaderm Hydrocolloid**

Hydrocolloid dressing with adhesive border; normal or thin

**Tegaderm Hydrocolloid** (3M Health Care Ltd) Thin dressing 10cm × 12cm oval= £1.58, 13cm × 15cm oval= £2.95, dressing 10cm × 12cm oval= £2.37, 13cm × 15cm oval= £4.42, 17.1cm × 16.1cm sacral= £4.94

#### **Without adhesive border**

##### **ActivHeal Hydrocolloid**

Semi-permeable polyurethane film backing, hydrocolloid wound contact layer, with or without polyurethane foam later

**ActivHeal Hydrocolloid** (Advanced Medical Solutions Ltd) dressing 10cm × 10cm square= £1.58, 15cm × 15cm square= £3.43, 15cm × 18cm sacral= £3.98, 5cm × 7.5cm rectangular= £0.78, foam backed dressing 10cm × 10cm square= £1.55, 15cm × 15cm square= £2.91, 15cm × 18cm square= £3.36, 5cm × 7.5cm rectangular= £0.97

##### **Askina Biofilm Transparent**

Semi-permeable, polyurethane film dressing with hydrocolloid adhesive

##### **Biatain Super**

Semi-permeable, hydrocolloid film dressing without adhesive border

**Biatain Super dressing (non-adhesive)** (Coloplast Ltd) 10cm × 10cm square= £2.26, 12.5cm × 12.5cm square= £3.73, 12cm × 20cm rectangular= £3.74, 15cm × 15cm square= £4.50, 20cm × 20cm square= £7.02

**Comfeel Plus Contour**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Contour dressing** (Coloplast Ltd) 6cm × 8cm= £2.29, 9cm × 11cm= £3.98

**Comfeel Plus Pressure Relieving**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Pressure Relief dressing** (Coloplast Ltd) 10cm diameter circular= £4.79, 15cm diameter circular= £7.22, 7cm diameter circular= £3.58

**Comfeel Plus Transparent**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Transparent dressing** (Coloplast Ltd) 10cm × 10cm square= £1.32, 15cm × 15cm square= £3.44, 15cm × 20cm rectangular= £3.49, 20cm × 20cm square= £3.52, 5cm × 15cm rectangular= £1.64, 5cm × 25cm rectangular= £2.66, 5cm × 7cm rectangular= £0.69, 9cm × 14cm rectangular= £2.51, 9cm × 25cm rectangular= £3.57

**Comfeel Plus Ulcer**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus dressing** (Coloplast Ltd) 10cm × 10cm square= £2.53, 20cm × 20cm square= £7.80, 4cm × 6cm rectangular= £0.99

**DuoDERM Extra Thin**

Semi-permeable hydrocolloid dressing

**DuoDERM Extra Thin dressing** (ConvaTec Ltd) 10cm × 10cm square= £1.39, 15cm × 15cm square= £3.00, 5cm × 10cm rectangular= £0.79, 7.5cm × 7.5cm square= £0.84, 9cm × 15cm rectangular= £1.86, 9cm × 25cm rectangular= £2.97, 9cm × 35cm rectangular= £4.15

**DuoDERM Signal**

Semi-permeable hydrocolloid dressing with 'Time to change' indicator

**DuoDERM Signal dressing** (ConvaTec Ltd) 10cm × 10cm square= £2.23, 11cm × 19cm oval= £3.37, 14cm × 14cm square= £3.91, 18.5cm × 19.5cm heel= £5.46, 20cm × 20cm square= £7.77, 22.5cm × 20cm sacral= £6.38

**Flexigran**

Semi-permeable hydrocolloid dressing without adhesive border; normal or thin

**Flexigran** (A1 Pharmaceuticals) Thin dressing 10cm × 10cm square= £1.08, dressing 10cm × 10cm square= £2.19

**Granuflex**

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

**Granuflex (modified) dressing** (ConvaTec Ltd) 10cm × 10cm square= £2.94, 15cm × 15cm square= £5.58, 15cm × 20cm rectangular= £6.05, 20cm × 20cm square= £8.40

**Hydrocoll Basic**

Hydrocolloid dressing with absorbent wound contact pad

**Hydrocoll** (Paul Hartmann Ltd) Basic dressing 10cm × 10cm square= £2.56

**Hydrocoll Thin Film**

Thin hydrocolloid dressing with absorbent wound contact pad

**Hydrocoll Thin Film dressing** (Paul Hartmann Ltd) 10cm × 10cm square= £1.20, 15cm × 15cm square= £2.71, 7.5cm × 7.5cm square= £0.73

**Nu-Derm**

Semi-permeable hydrocolloid dressing (normal and thin)

**Nu-Derm dressing** (Systagenix Wound Management Ltd) 10cm × 10cm square= £1.57, 15cm × 15cm square= £3.21, 15cm × 18cm sacral= £4.49, 20cm × 20cm square= £6.41, 5cm × 5cm square= £0.86, 8cm × 12cm heel/elbow= £3.21, thin 10cm × 10cm square= £1.07

**Tegaderm Hydrocolloid**

Hydrocolloid dressing without adhesive border; normal and thin

**Tegaderm Hydrocolloid** (3M Health Care Ltd) Thin dressing 10cm × 10cm square= £1.58, dressing 10cm × 10cm square= £2.41

**Foam dressings**

Dressings containing hydrophilic polyurethane foam (adhesive or non-adhesive), with or without plastic film-backing, are suitable for all types of exuding wounds, but not for dry wounds; some foam dressings have a moisture-sensitive film backing with variable permeability dependant on the level of exudate. Foam dressings vary in their ability to absorb exudate; some are suitable only for lightly to moderately exuding wounds, others have greater fluid-handling capacity and are suitable for heavily exuding wounds. Saturated foam dressings can cause maceration of healthy skin if left in contact with the wound. Foam dressings can be used in combination with other primary wound contact dressings. If used under compression bandaging or compression garments, the fluid-handling capacity of the foam dressing may be reduced. Foam dressings can also be used to provide a protective cushion for fragile skin. A foam dressing containing ibuprofen is available and may be useful for treating painful exuding wounds.

**Cavi-Care**

Soft, conforming cavity wound dressing prepared by mixing thoroughly for 15 seconds immediately before use and allowing to expand its volume within the cavity

**Polyurethane Foam Dressing****Cutimed Cavity**

**Cutimed Cavity dressing** (BSN medical Ltd) 10cm × 10cm= £3.24, 15cm × 15cm= £4.86, 5cm × 6cm= £1.95

**Kendall**

**Kendall Foam dressing** (H & R Healthcare Ltd) 10cm × 10cm square= £1.07, 10cm × 20cm rectangular= £2.07, 12.5cm × 12.5cm square= £1.82, 15cm × 15cm square= £2.63, 20cm × 20cm square= £3.04, 5cm × 5cm square= £0.72, 7.5cm × 7.5cm square= £1.23, 8.5cm × 7.5cm rectangular (fenestrated)= £0.92

**Polyurethane Foam Film Dressing with Adhesive Border****ActivHeal Foam Adhesive**

**ActivHeal Foam Adhesive dressing** (Advanced Medical Solutions Ltd) 10cm × 10cm square= £1.63, 12.5cm × 12.5cm square= £1.68, 15cm × 15cm square= £2.15, 20cm × 20cm square= £4.50, 7.5cm × 7.5cm square= £1.18

**Allevyn Adhesive**

**Allevyn Adhesive dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £2.30, 12.5cm × 12.5cm square= £2.81, 12.5cm × 22.5cm rectangular= £4.37, 17.5cm × 17.5cm square= £5.55, 17cm × 17cm anatomically shaped sacral= £4.17, 22.5cm × 22.5cm square= £8.08, 22cm × 22cm anatomically shaped sacral= £6.00, 7.5cm × 7.5cm square= £1.57

**Biatain Adhesive**

**Biatain Adhesive dressing** (Coloplast Ltd) 10cm × 10cm square= £1.84, 12.5cm × 12.5cm square= £2.69, 17cm diameter contour= £5.22, 18cm × 18cm square= £5.42, 18cm × 28cm rectangular= £8.03, 19cm × 20cm heel= £5.42, 23cm × 23cm sacral= £4.64

**Biatain Silicone**

**Biatain Silicone dressing** (Coloplast Ltd) 10cm × 10cm= £2.23, 12.5cm × 12.5cm= £2.72, 15cm × 15cm= £4.04, 17.5cm × 17.5cm= £5.37, 7.5cm × 7.5cm= £1.51

**Kendall Island**

**Kendall Foam Island dressing** (H & R Healthcare Ltd) 10cm × 10cm square= £1.54, 15cm × 15cm square= £2.90, 20cm × 20cm square= £5.46

**PolyMem**

**PolyMem dressing** (H & R Healthcare Ltd) (adhesive) 5cm × 5cm square= £0.52, 16.5cm × 20.9cm oval= £6.79, 18.4cm × 20cm sacral= £4.56, 5cm × 7.6cm oval= £1.16, 8.8cm × 12.7cm oval= £2.06

**Tegaderm Foam Adhesive**

**Tegaderm Foam dressing (adhesive)** (3M Health Care Ltd) 10cm × 11cm oval= £2.42, 13.9cm × 13.9cm circular (heel)= £4.30, 14.3cm × 14.3cm square= £3.60, 14.3cm × 15.6cm oval= £4.32,

19cm × 22.2cm oval= £7.09, 6.9cm × 6.9cm soft cloth border= £1.74, 6.9cm × 7.6cm oval= £1.49

#### Tielle

**Tielle** (Systagenix Wound Management Ltd) Lite dressing 11cm × 11cm square= £2.33, dressing 15cm × 15cm square= £3.92, 15cm × 20cm rectangular= £4.90, 18cm × 18cm square= £4.99, 7cm × 9cm rectangular= £1.29

#### Tielle Lite

**Tielle Lite dressing** (Systagenix Wound Management Ltd) 11cm × 11cm square= £2.33, 7cm × 9cm rectangular= £1.23, 8cm × 15cm rectangular= £2.86, 8cm × 20cm rectangular= £3.03

#### Tielle Plus

**Tielle Plus dressing** (Systagenix Wound Management Ltd) 11cm × 11cm square= £2.66, 15cm × 15cm square= £3.17, square= £4.34, 15cm × 20cm rectangular= £5.45, 20cm × 26.5cm heel= £4.50

*Polyurethane Foam Film Dressing without Adhesive Border*

#### ActivHeal Foam Non-Adhesive

**ActivHeal Non-Adhesive Foam polyurethane dressing** (Advanced Medical Solutions Ltd) 10cm × 10cm square= £1.13, 10cm × 20cm rectangular= £2.34, 20cm × 20cm square= £3.92, 5cm × 5cm square= £0.75

#### Advazorb

**Advazorb** (Advancis Medical) Heel dressing 17cm × 21cm= £4.91, dressing 10cm × 10cm square= £1.12, 10cm × 20cm rectangular= £3.46, 12.5cm × 12.5cm square= £1.64, 15cm × 15cm square= £2.17, 20cm × 20cm square= £3.88, 5cm × 5cm square= £0.67, 7.5cm × 7.5cm square= £0.81

#### Advazorb Lite

**Advazorb Lite dressing** (Advancis Medical) 10cm × 10cm square= £1.00, 10cm × 20cm rectangular= £3.12, 12.5cm × 12.5cm square= £1.48, 15cm × 15cm square= £1.95, 20cm × 20cm square= £3.49, 7.5cm × 7.5cm square= £0.72

#### Allevyn Non-Adhesive

**Allevyn dressing (non-adhesive)** (Smith & Nephew Healthcare Ltd) 10.5cm × 13.5cm heel (cup shaped)= £5.37, 10cm × 10cm square= £2.63, 10cm × 20cm rectangular= £4.22, 20cm × 20cm square= £7.05, 5cm × 5cm square= £1.33

#### Askina Foam

**Askina** (B.Braun Medical Ltd) Foam Cavity dressing 2.4cm × 40cm= £2.54, Foam dressing 10cm × 10cm square= £2.27, 10cm × 20cm rectangular= £3.59, 20cm × 20cm square= £5.99, Heel dressing 12cm × 20cm= £4.86

#### Biatain -Ibu Non-Adhesive

**Biatain-ibu Non-Adhesive dressing** (Coloplast Ltd) 10cm × 12cm rectangular= £3.48, 10cm × 22.5cm rectangular= £5.48, 15cm × 15cm square= £5.48, 20cm × 20cm square= £9.31, 5cm × 7cm rectangular= £1.81

#### Biatain -Ibu Soft-Hold

**Biatain-ibu Soft-Hold dressing** (Coloplast Ltd) 10cm × 12cm rectangular= £3.48, 10cm × 22.5cm rectangular= £5.48, 15cm × 15cm square= £5.48

#### Biatain Non-Adhesive

**Biatain Non-Adhesive dressing** (Coloplast Ltd) 10cm × 10cm square= £2.50, 10cm × 20cm rectangular= £4.13, 15cm × 15cm square= £4.61, 20cm × 20cm square= £6.84, 5cm × 7cm rectangular= £1.38

#### Biatain Soft-Hold

**Biatain Soft-Hold dressing** (Coloplast Ltd) 10cm × 10cm square= £2.72, 10cm × 20cm rectangular= £4.13, 15cm × 15cm square= £4.52, 5cm × 7cm rectangular= £1.38

#### Kendall Plus

**Kendall Foam Plus dressing** (H & R Healthcare Ltd) 10cm × 10cm square= £1.48, 10cm × 20cm rectangular= £2.72, 15cm × 15cm square= £3.42, 20cm × 20cm square= £4.08, 5cm × 5cm square= £0.82, 7.5cm × 7.5cm square= £1.43, 8.5cm × 7.5cm rectangular (fenestrated)= £1.26

#### Kerraheel

**Kerraheel** (Crawford Healthcare Ltd) dressing 12cm × 20cm heel= £4.78

#### Lyfoam Max

**Lyfoam Max dressing** (Molnlycke Health Care Ltd) 10cm × 10cm square= £1.18, 10cm × 20cm rectangular= £2.08, 15cm × 15cm square= £2.22, 15cm × 20cm rectangular= £2.80, 20cm × 20cm square= £4.11, 7.5cm × 8.5cm rectangular= £1.12

#### PermaFoam

**PermaFoam** (Paul Hartmann Ltd) Classic dressing (non-adhesive) 8cm × 8cm square (fenestrated)= £1.31

#### PolyMem

**PolyMem dressing** (H & R Healthcare Ltd) 7cm × 7cm tube= £1.73, 9cm × 9cm tube= £2.19, finger/toe size 1= £2.52, 2= £2.52, 3= £2.52

#### PolyMem

**PolyMem dressing (non-adhesive)** (H & R Healthcare Ltd) 10cm × 10cm square= £2.49, 10cm × 61cm roll= £13.20, 13cm × 13cm square= £4.15, 17cm × 19cm rectangular= £6.13, 20cm × 60cm roll= £31.13, 8cm × 8cm square= £1.60

#### PolyMem Max

**PolyMem Max dressing** (H & R Healthcare Ltd) 11cm × 11cm square= £2.99, 20cm × 20cm square= £11.77

#### PolyMem WIC

**PolyMem** (H & R Healthcare Ltd) WIC dressing 8cm × 8cm= £3.72

#### Tegaderm Foam

**Tegaderm Foam dressing** (3M Health Care Ltd) 10cm × 10cm square= £2.23, 10cm × 20cm rectangular= £3.78, 10cm × 60cm rectangular= £12.77, 20cm × 20cm square= £6.03, 8.8cm × 8.8cm square (fenestrated)= £2.27

#### Transorbent

**Transorbent dressing (adhesive)** (B.Braun Medical Ltd) 10cm × 10cm square= £2.04, 15cm × 15cm square= £3.75, 20cm × 20cm square= £5.99, 5cm × 7cm rectangular= £1.08

#### UrgoCell TLC

**UrgoTul Absorb dressing** (Urgo Ltd) 10cm × 10cm= £2.41, 15cm × 20cm= £4.26, 6cm × 6cm= £1.23, 12cm × 19cm heel= £4.86

#### Alginate dressings

Non-woven or fibrous, non-occlusive, alginate dressings, made from calcium alginate, or calcium sodium alginate, derived from brown seaweed, form a soft gel in contact with wound exudate. Alginate dressings are highly absorbent and suitable for use on exuding wounds, and for the promotion of autolytic debridement of debris in very moist wounds. Alginate dressings also act as a haemostatic, but caution is needed because blood clots can cause the dressing to adhere to the wound surface. Alginate dressings should not be used if bleeding is heavy and extreme caution is needed if used for tumours with friable tissue. Alginate sheets are suitable for use as a wound contact dressing for moderately to heavily exuding wounds and can be layered into deep wounds; alginate rope can be used in sinus and cavity wounds to improve absorption of exudate and prevent maceration. If the dressing does not have an adhesive border or integral adhesive plastic film backing, a secondary dressing will be required.

#### ActivHeal Alginate

Calcium sodium alginate dressing  
**ActivHeal Alginate dressing** (Advanced Medical Solutions Ltd) 10cm × 10cm= £1.15, 10cm × 20cm= £2.83, 5cm × 5cm= £0.59

#### ActivHeal Aquafiber

Non-woven, calcium sodium alginate dressing  
**ActivHeal Aquafiber** (Advanced Medical Solutions Ltd) Rope dressing 2cm × 42cm= £1.81, dressing 10cm × 10cm= £1.48, 15cm × 15cm= £2.79, 5cm × 5cm= £0.62

#### Algisite M

Calcium alginate fibre, non-woven dressing  
**Algisite M** (Smith & Nephew Healthcare Ltd) Rope dressing 2cm × 30cm= £3.65, dressing 10cm × 10cm= £2.01, 15cm × 20cm= £5.41, 5cm × 5cm= £0.97

#### Biatain Alginate

Alginate and carboxymethylcellulose dressing, highly absorbent, gelling dressing

**Biatain Alginate dressing** (Coloplast Ltd) 10cm × 10cm= £2.43, 15cm × 15cm= £4.61, 44cm= £2.86, 5cm × 5cm= £1.02

#### Cutimed Alginate

Calcium sodium alginate dressing

**Cutimed Alginate dressing** (BSN medical Ltd) 10cm × 10cm= £1.62, 10cm × 20cm= £3.05, 5cm × 5cm= £0.77

#### Kaltostat

Calcium alginate fibre, non-woven

**Kaltostat dressing** (ConvaTec Ltd) 10cm × 20cm= £4.29, 15cm × 25cm= £7.38, 2g= £4.02, 5cm × 5cm= £1.00, 7.5cm × 12cm= £2.19

#### Kendall

Calcium alginate dressing

**Kendall Calcium Alginate** (H & R Healthcare Ltd) Rope dressing 30cm= £2.89, 61cm= £5.07, 91cm= £5.46, dressing 10cm × 10cm= £1.52, 10cm × 14cm= £2.45, 10cm × 20cm= £2.98, 15cm × 25cm= £5.25, 30cm × 61cm= £27.56, 5cm × 5cm= £0.72

#### Kendall Plus

Calcium alginate dressing

**Kendall** (H & R Healthcare Ltd) Foam Plus dressing 10cm × 10cm square= £1.48

#### Melgisorb

Calcium sodium alginate fibre, highly absorbent, gelling dressing, non-woven

**Melgisorb** (Molnlycke Health Care Ltd) Cavity dressing 2.2cm × 32cm= £3.55, dressing 10cm × 10cm= £1.88, 10cm × 20cm= £3.52, 5cm × 5cm= £0.90

#### Sorbalgon

Calcium alginate dressing

**Sorbalgon** (Paul Hartmann Ltd) T dressing 2g= £3.63, dressing 10cm × 10cm= £1.78, 5cm × 5cm= £0.85

#### Sorbsan Flat

Calcium alginate fibre, highly absorbent, flat non-woven pads

**Sorbsan Flat dressing** (Aspen Medical Europe Ltd) 10cm × 10cm= £1.72, 10cm × 20cm= £3.22, 5cm × 5cm= £0.82

#### Sorbsan Plus

Alginate dressing bonded to a secondary absorbent viscose pad

**Sorbsan Plus dressing** (Aspen Medical Europe Ltd) 10cm × 15cm= £3.12, 10cm × 20cm= £3.98, 15cm × 20cm= £5.53, 7.5cm × 10cm= £1.77

#### Sorbsan Ribbon

Alginate dressing bonded to a secondary absorbent viscose pad

**Sorbsan** (Aspen Medical Europe Ltd) Ribbon dressing 40cm= £2.06

#### Sorbsan Surgical Packing

Alginate dressing bonded to a secondary absorbent viscose pad

**Sorbsan** (Aspen Medical Europe Ltd) Packing dressing 2g= £3.50

#### Suprasorb A

Calcium alginate dressing

**Suprasorb A** (Lohmann & Rauscher) alginate dressing 10cm × 10cm= £1.28, 5cm × 5cm= £0.65, cavity dressing 2g= £2.37

#### Tegaderm Alginate

Calcium alginate dressing

**Tegaderm Alginate dressing** (3M Health Care Ltd) 10cm × 10cm= £1.75, 2cm × 30.4cm= £2.92, 5cm × 5cm= £0.83

#### Urgosorb

Alginate and carboxymethylcellulose dressing without adhesive border

**Urgosorb** (Urgo Ltd) Pad dressing 10cm × 10cm= £2.22, 10cm × 20cm= £4.07, 5cm × 5cm= £0.92, Rope dressing 30cm= £2.91

#### Capillary-acting dressings

##### Vacutex

Low-adherent dressing consisting of two external polyester wound contact layers with central wicking polyester/cotton mix absorbent layer

**Vacutex dressing** (Haddenham Healthcare Ltd) 10cm × 10cm= £1.70, 10cm × 15cm= £2.29, 10cm × 20cm= £2.75, 5cm × 5cm= £0.96

#### Odour absorbent dressings

Dressings containing activated charcoal are used to absorb odour from wounds. The underlying cause of wound odour should be identified. Wound odour is most effectively reduced by debridement of slough, reduction in bacterial levels, and frequent dressing changes. Fungating wounds and chronic infected wounds produce high volumes of exudate which can reduce the effectiveness of odour absorbent dressings. Many odour absorbent dressings are intended for use in combination with other dressings; odour absorbent dressings with a suitable wound contact layer can be used as a primary dressing.

##### Askina Carbosorb

Activated charcoal and non-woven viscose rayon dressing

**Askina Carbosorb dressing** (B.Braun Medical Ltd) 10cm × 10cm= £3.00, 10cm × 20cm= £5.79

##### CarboFLEX

Dressing in 5 layers: wound-facing absorbent layer containing alginate and hydrocolloid; water-resistant second layer; third layer containing activated charcoal; non-woven absorbent fourth layer; water-resistant backing layer

**CarboFlex dressing** (ConvaTec Ltd) 10cm × 10cm= £3.33, 15cm × 20cm= £7.58, 8cm × 15cm oval= £4.00

##### Carbopad VC

Activated charcoal non-absorbent dressing

**Carbopad VC dressing** (Synergy Health (UK) Ltd) 10cm × 10cm= £1.62, 10cm × 20cm= £2.19

##### CliniSorb Odour Control Dressings

Activated charcoal cloth enclosed in viscose rayon with outer polyamide coating

**CliniSorb dressing** (CliniMed Ltd) 10cm × 10cm= £1.99, 10cm × 20cm= £2.64, 15cm × 25cm= £4.26

#### Antimicrobial dressings

Spreading infection at the wound site requires treatment with systemic antibacterials. For local wound infection, a topical antimicrobial dressing can be used to reduce the level of bacteria at the wound surface but will not eliminate a spreading infection. Some dressings are designed to release the antimicrobial into the wound, others act upon the bacteria after absorption from the wound. The amount of exudate present and the level of infection should be taken into account when selecting an antimicrobial dressing.

Medical grade honey has antimicrobial and anti-inflammatory properties. Dressings impregnated with iodine can be used to treat clinically infected wounds. Dressings containing silver should be used only when clinical signs or symptoms of infection are present. Dressings containing other antimicrobials such as polihexanide (polyhexamethylene biguanide) or dialkylcarbamoyl chloride are available for use on infected wounds. Although hypersensitivity is unlikely with chlorhexidine impregnated tulle dressing, the antibacterial efficacy of these dressings has not been established.

##### Honey dressings

Medical grade honey has antimicrobial and anti-inflammatory properties and can be used for acute or chronic wounds. Medical grade honey has osmotic properties, producing an environment that promotes autolytic debridement; it can help control wound malodour. Honey dressings should not be used on patients with extreme sensitivity to honey, bee stings or bee products. Patients with diabetes should be monitored for changes in blood-glucose concentrations during treatment with topical honey or honey-impregnated dressings.

For *Activon Tulle*®, where no size is stated by the prescriber the 5 cm size is to be supplied.

*Medihoney*® Antimicrobial Wound Gel is not recommended for use in deep wounds or body cavities where removal of waxes may be difficult.

*Honey-based topical application***Activon Honey**

Medical grade manuka honey

**Activon** (Advancis Medical) Medical Grade Manuka Honey dressing= £2.77**L-Mesitran SOFT ointment dressing**

Acetate wound contact layer impregnated with buckwheat honey 75% in ointment basis

**Melladerm Plus Tulle**

Knitted viscose impregnated with medical grade honey (Bulgarian, mountain flower) 45% in a basis containing polyethylene glycol

**Melladerm** (SanoMed Manufacturing BV) Plus Tulle dressing 10cm × 10cm= £2.10**Iodine dressings**

Cadexomer–iodine, like povidone–iodine, releases free iodine when exposed to wound exudate. The free iodine acts as an antiseptic on the wound surface, the cadexomer absorbs wound exudate and encourages de-sloughing. Two-component hydrogel dressings containing glucose oxidase and iodide ions generate a low level of free iodine in the presence of moisture and oxygen. Povidone–iodine fabric dressing is a knitted viscose dressing with povidone–iodine incorporated in a hydrophilic polyethylene glycol basis; this facilitates diffusion of the iodine into the wound and permits removal of the dressing by irrigation. The iodine has a wide spectrum of antimicrobial activity but it is rapidly deactivated by wound exudate. Systemic absorption of iodine may occur, particularly from large wounds or with prolonged use.

**IodoFlex®** and **Iodosorb®** are used for the treatment of chronic exuding wounds; max. single application 50g, max. weekly application 150g; max. duration up to 3 months in any single course of treatment. They are contra-indicated in patients receiving lithium, in thyroid disorders, in pregnancy and breast feeding, and in children; they should be used with caution in patients with severe renal impairment or history of thyroid disorder.

**Iodozyme®** is an antimicrobial dressing used for lightly to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

**Oxyzyme®** is used for non-infected, dry to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

**Povidone-iodine Fabric Dressing** is used as a wound contact layer for abrasions and superficial burns. It is contra-indicated in patients with severe renal impairment and in women who are pregnant or breast-feeding; it should be used with caution in patients with thyroid disease and in children under 6 months.

**Iodoflex Paste**

Iodine 0.9% as cadexomer–iodine in a paste basis with gauze backing

**Iodoflex paste** (Smith & Nephew Healthcare Ltd) dressing= 5g = £4.28, 10g = £8.54, 17g = £13.54**Iodosorb Ointment**

Iodine 0.9% as cadexomer–iodine in an ointment basis

**Iodosorb** (Smith & Nephew Healthcare Ltd) ointment dressing= £9.44**Iodosorb Powder**

Iodine 0.9% as cadexomer–iodine microbeads, 3-g sachet

**Iodosorb** (Smith & Nephew Healthcare Ltd) powder dressing sachets= £2.02

*Povidone-iodine fabric dressing***Inadine**

(Drug Tariff specification 43). Knitted-viscose primary dressing impregnated with povidone-iodine ointment 10% **Inadine dressing** (Systagenix Wound Management Ltd) 5cm × 5cm= £0.33, 9.5cm × 9.5cm= £0.49

**Silver dressings**

Antimicrobial dressings containing silver should be used only when infection is suspected as a result of clinical signs or symptoms (see also notes above). Silver ions exert an antimicrobial effect in the presence of wound exudate; the volume of wound exudate as well as the presence of infection should be considered when selecting a silver-containing dressing. Silver-impregnated dressings should not be used routinely for the management of uncomplicated ulcers. It is recommended that these dressings should not be used on acute wounds as there is some evidence to suggest they delay wound healing. Dressings impregnated with silver sulfadiazine have broad antimicrobial activity; if silver sulfadiazine is applied to large areas, or used for prolonged periods, there is a risk of blood disorders and skin discoloration. The use of silver sulfadiazine-impregnated dressings is contra-indicated in neonates, in pregnancy, and in patients with significant renal or hepatic impairment, sensitivity to sulfonamides, or G6PD deficiency. Large amounts of silver sulfadiazine applied topically may interact with other drugs—see Appendix 1 (sulfonamides).

*Alginate dressings***Algisite Ag**

Calcium alginate dressing, with silver

**Algisite Ag dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £4.31, 10cm × 20cm= £7.94, 2g= £5.96, 5cm × 5cm= £1.73

**Askina Calgitrol Ag**

Calcium alginate and silver alginate dressing with polyurethane foam backing

**Askina Calgitrol Ag dressing** (B.Braun Medical Ltd) 10cm × 10cm square= £3.33, 15cm × 15cm square= £6.44, 20cm × 20cm square= £15.02

**Askina Calgitrol Thin**

Calcium alginate and silver alginate matrix, for use with absorptive secondary dressings

**Askina Calgitrol Thin dressing** (B.Braun Medical Ltd) 10cm × 10cm square= £4.24, 15cm × 15cm square= £9.51, 20cm × 20cm square= £16.80, 5cm × 5cm square= £2.04

**Meligisorb Ag**

Alginate and carboxymethylcellulose dressing, with ionic silver

**Meligisorb Ag** (Molnlycke Health Care Ltd) Cavity dressing 3cm × 44cm= £4.72, dressing 10cm × 10cm= £3.79, 15cm × 15cm= £8.02, 5cm × 5cm= £1.89

**Silvercel**

Alginate and carboxymethylcellulose dressing impregnated with silver

**Silvercel dressing** (Systagenix Wound Management Ltd) 10cm × 20cm rectangular= £7.82, 11cm × 11cm square= £4.21, 2.5cm × 30.5cm rectangular= £4.54, 5cm × 5cm square= £1.71

**Silvercel Non-adherent**

Alginate and carboxymethylcellulose dressing with film wound contact layer, impregnated with silver

**Silvercel Non-Adherent** (Systagenix Wound Management Ltd) cavity dressing 2.5cm × 30.5cm= £3.98, dressing 10cm × 20cm rectangular= £7.33, 11cm × 11cm square= £3.93, 5cm × 5cm square= £1.64

**Sorbsan Silver Flat**

Calcium alginate fibre, highly absorbent, flat non-woven pads, with silver

**Sorbsan Silver Flat dressing** (Aspen Medical Europe Ltd) 10cm × 10cm= £4.00, 10cm × 20cm= £7.31, 5cm × 5cm= £1.58

**Sorbsan Silver Plus**

Calcium alginate dressing with absorbent backing, with silver

**Sorbsan Silver Plus dressing** (Aspen Medical Europe Ltd) 10cm × 15cm= £5.60, 10cm × 20cm= £6.82, 15cm × 20cm= £9.15, 7.5cm × 10cm= £3.37

**Sorbsan Silver Ribbon**

With silver

**Sorbsan** (Aspen Medical Europe Ltd) Silver Ribbon dressing 1g= £4.18

**Sorbsan Silver Surgical Packing**

With silver

**Sorbsan** (Aspen Medical Europe Ltd) Silver Packing dressing 2g= £5.80

**Suprasorb A + Ag**

Calcium alginate dressing, with silver

**Suprasorb A + Ag** (Lohmann & Rauscher) dressing 10cm × 10cm= £4.26, 10cm × 20cm= £7.87, 5cm × 5cm= £1.69, rope dressing 2g= £6.30

**Tegaderm Alginate Ag**

Calcium alginate and carboxymethylcellulose dressing, with silver

**Tegaderm Alginate Ag dressing** (3M Health Care Ltd) 10cm × 10cm= £3.30, 3cm × 30cm= £3.77, 5cm × 5cm= £1.42

**Urgosorb Silver**

Alginate and carboxymethylcellulose dressing, impregnated with silver

**Urgosorb Silver** (Urgo Ltd) Rope dressing 2.5cm × 30cm= £3.86, dressing 10cm × 10cm= £3.84, 10cm × 20cm= £7.24, 5cm × 5cm= £1.61

*Foam dressings***Acticoat Moisture Control**

Three layer polyurethane dressing consisting of a silver coated layer, a foam layer, and a waterproof layer

**Acticoat Moisture Control dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £17.66, 10cm × 20cm rectangular= £34.41, 5cm × 5cm square= £7.55

**Allevyn Ag**

Silver sulfadiazine impregnated polyurethane foam film dressing with or without adhesive border

**Allevyn Ag** (Smith & Nephew Healthcare Ltd) Adhesive dressing 10cm × 10cm square= £5.71, 12.5cm × 12.5cm square= £7.50, 17.5cm × 17.5cm square= £14.43, 17cm × 17cm sacral= £11.26, 22cm × 22cm sacral= £15.10, 7.5cm × 7.5cm square= £3.62, Heel Non-Adhesive dressing 10.5cm × 13.5cm= £11.17, Non-Adhesive dressing 10cm × 10cm square= £6.37, 15cm × 15cm square= £12.08, 20cm × 20cm square= £17.70, 5cm × 5cm square= £3.38

**Biatain Ag**

Silver impregnated polyurethane foam film dressing, with or without adhesive border

**Biatain Ag** (Coloplast Ltd) cavity dressing 5cm × 8cm= £4.23, dressing 10cm × 10cm square= £8.50, 10cm × 20cm rectangular= £15.61, 12.5cm × 12.5cm square= £9.72, 15cm × 15cm square= £17.05, 18cm × 18cm square= £19.50, 19cm × 20cm heel= £19.23, 20cm × 20cm square= £24.05, 23cm × 23cm sacral= £20.44, 5cm × 7cm rectangular= £3.49

**PolyMem Silver**

Silver impregnated polyurethane foam film dressing, with or without adhesive border

**PolyMem Silver** (H & R Healthcare Ltd) WIC dressing 8cm × 8cm= £7.10, dressing 10.8cm × 10.8cm square= £8.93, 12.7cm × 8.8cm oval= £5.64, 17cm × 19cm rectangular= £17.89, 5cm × 7.6cm oval= £2.29

**UrgoCell Silver**

Non-adherent, polyurethane foam film dressing with silver in wound contact layer

*Hydrocolloid dressings***Aquacel Ag**

Soft non-woven pad containing hydrocolloid fibres, (silver impregnated)

**Aquacel Ag** (ConvaTec Ltd) Ribbon dressing 1cm × 45cm= £3.20, 2cm × 45cm= £4.96, dressing 10cm × 10cm square= £4.93, 15cm × 15cm square= £9.28, 20cm × 30cm rectangular= £23.03, 4cm

× 10cm rectangular= £3.00, 4cm × 20cm rectangular= £3.91,  
4cm × 30cm rectangular= £5.86

### Physiotulle Ag

Non-adherent polyester fabric with hydrocolloid and silver sulfadiazine

**Physiotulle** (Coloplast Ltd) dressing 10cm × 10cm= £2.38

### Low adherence dressing

#### Acticoat

Three-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

**Acticoat dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £9.01, 10cm × 20cm rectangular= £14.09, 20cm × 40cm rectangular= £48.21, 5cm × 5cm square= £3.69

#### Acticoat 7

Five-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

**Acticoat 7 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £19.10, 15cm × 15cm square= £34.34, 5cm × 5cm square= £6.41

#### Acticoat Flex 3

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

**Acticoat Flex 3 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £8.99, 10cm × 20cm rectangular= £14.05, 20cm × 40cm rectangular= £48.08, 5cm × 5cm square= £3.68

#### Acticoat Flex 7

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

**Acticoat Flex 7 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £19.05, 15cm × 15cm square= £34.26, 5cm × 5cm square= £6.40

### Atrauman Ag

Non-adherent polyamide fabric impregnated with silver and neutral triglycerides

**Atrauman Ag dressing** (Paul Hartmann Ltd) 10cm × 10cm= £1.31, 10cm × 20cm= £2.56, 5cm × 5cm= £0.54

### Soft polymer dressings

#### Allevyn Ag Gentle

Soft polymer wound contact dressing, with silver sulfadiazine impregnated polyurethane foam layer, with or without adhesive border

**Allevyn Ag Gentle** (Smith & Nephew Healthcare Ltd) Border dressing 10cm × 10cm= £6.69, 12.5cm × 12.5cm= £8.61, 17.5cm × 17.5cm= £16.40, 7.5cm × 7.5cm= £4.45, dressing 10cm × 10cm= £6.50, 10cm × 20cm= £10.74, 15cm × 15cm= £12.09, 20cm × 20cm= £17.91, 5cm × 5cm= £3.49

#### Mepilex Ag

Soft silicone wound contact dressing with polyurethane foam film backing, with silver, with or without adhesive border

**Mepilex** (Molnlycke Health Care Ltd) Ag dressing 10cm × 10cm= £6.37, 10cm × 20cm= £10.50, 15cm × 15cm= £11.82, 20cm × 20cm= £17.51, 20cm × 50cm= £65.72, Border Ag dressing 10cm × 12.5cm= £6.41, 10cm × 20cm= £9.33, 10cm × 30cm= £14.00, 15cm × 17.5cm= £11.76, 17cm × 20cm= £15.24, 7cm × 7.5cm= £3.54, Border Sacrum Ag dressing 18cm × 18cm= £12.30, 20cm × 20cm= £14.95, 23cm × 23cm= £19.64, Heel Ag dressing 13cm × 20cm= £13.29, 15cm × 22cm= £14.89

### Urgotul Silver

Non-adherent soft polymer wound contact dressing, with silver

**Urgotul Silver dressing** (Urgo Ltd) 10cm × 12cm= £3.24, 15cm × 20cm= £9.18

### With charcoal

#### Actisorb Silver 220

Knitted fabric of activated charcoal, with one-way stretch, with silver residues, within spun-bonded nylon sleeve

**Actisorb Silver 220 dressing** (Systagenix Wound Management Ltd)

10.5cm × 10.5cm= £2.63, 10.5cm × 19cm= £4.78, 6.5cm × 9.5cm= £1.68

## Other antimicrobials

### Cutimed Siltec Sorbact

Polyurethane foam dressing with acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border

**Cutimed Siltec Sorbact dressing** (BSN medical Ltd) 12.5cm × 12.5cm= £6.69, 15cm × 15cm= £8.29, 17.5cm × 17.5cm= £11.60, 22.5cm × 22.5cm= £17.64, 7.5cm × 7.5cm= £2.61, 17.5cm × 17.5cm sacral= £8.38, 23cm × 23cm sacral= £12.60

### Cutimed Sorbact

Low adherence acetate tissue impregnated with dialkylcarbamoyl chloride; dressing pad, swabs, round swabs or ribbon gauze, cotton

**Cutimed Sorbact** (BSN medical Ltd) Ribbon dressing 2cm × 50cm= £4.19, 5cm × 200cm= £8.25, Round swab 3cm= £3.42, dressing pad 10cm × 10cm= £5.71, 10cm × 20cm= £8.90, 7cm × 9cm= £3.65, swab 4cm × 6cm= £1.71, 7cm × 9cm= £2.85

### Cutimed Sorbact Gel

Hydrogel dressing impregnated with dialkylcarbamoyl chloride

**Cutimed Sorbact Gel dressing** (BSN medical Ltd) 7.5cm × 15cm rectangular= £4.65, 7.5cm × 7.5cm square= £2.75

### Cutimed Sorbact Hydroactive

Non-adhesive gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride

**Cutimed Sorbact Hydroactive dressing** (BSN medical Ltd) 14cm × 14cm= £5.57, 14cm × 24cm= £8.93, 19cm × 19cm= £10.49, 24cm × 24cm= £15.90, 7cm × 8.5cm= £3.82

### Cutimed Sorbact Hydroactive B

Gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border

**Cutimed Sorbact Hydroactive B dressing** (BSN medical Ltd) 10cm × 10cm= £7.36, 10cm × 20cm= £11.78, 15cm × 15cm= £13.85, 5cm × 6.5cm= £4.13

### Flaminal Forte gel

Alginate with glucose oxidase and lactoperoxidase, for moderately to heavily exuding wounds

**Flaminal** (Flen Health UK Ltd) Forte gel dressing= £7.95

### Flaminal Hydro gel

Alginate with glucose oxidase and lactoperoxidase, for lightly to moderately exuding wounds

**Flaminal** (Flen Health UK Ltd) Hydro gel dressing= £7.95

### Kendall AMD

Foam dressing with polyhexanide, without adhesive border

**Kendall AMD Antimicrobial foam dressing** (H & R Healthcare Ltd) 10cm × 10cm square= £4.76, 10cm × 20cm rectangular= £9.02, 15cm × 15cm square= £9.02, 20cm × 20cm square= £13.21, 5cm × 5cm square= £2.53, 8.8cm × 7.5cm rectangular (fenestrated)= £4.28

### Kendall AMD Plus

Foam dressing with polyhexanide, without adhesive border

**Kendall AMD Antimicrobial Plus foam dressing** (H & R Healthcare Ltd) 10cm × 10cm square= £5.00, 8.8cm × 7.5cm rectangular (fenestrated)= £4.48

### Octenilin Wound gel

Wound gel, hydroxyethylcellulose and propylene glycol, with octenidine hydrochloride

**Octenilin** (Schulke & Mayr UK Ltd) Wound Gel dressing= 20ml = £4.78, 250ml = £25.21

### Prontosan Wound Gel

Hydrogel containing betaine surfactant and polyhexanide

**Prontosan** (B.Braun Medical Ltd) Wound Gel gel dressing= £6.62

### Suprasorb X + PHMB

Biosynthetic cellulose fibre dressing with polyhexanide

**Suprasorb X + PHMB dressing** (Lohmann & Rauscher) 14cm × 20cm rectangular= £12.06, 2cm × 21cm rope= £7.51, 5cm × 5cm square= £2.66, 9cm × 9cm square= £5.30

**Telfa AMD**

Low adherence absorbent perforated plastic film faced dressing with polihexanide

**Telfa AMD dressing** (H & R Healthcare Ltd) 10cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.28

**Telfa AMD Island**

Low adherence dressing with adhesive border and absorbent pad, with polihexanide

**Telfa AMD Island dressing** (H & R Healthcare Ltd) 10cm × 12.5cm= £0.59, 10cm × 20cm= £0.86, 10cm × 25.5cm= £0.98, 10cm × 35cm= £1.22

**Chlorhexidine gauze dressing****Bactigras**

Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with ointment containing chlorhexidine acetate

**Bactigras gauze dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= no price available, 5cm × 5cm= no price available

**Irrigation fluids****Ocutilin Wound irrigation solution**

Aqueous solution containing glycerol, ethylhexylglycerin and octenidine hydrochloride

**Ocutilin** (Schulke & Mayr UK Ltd) irrigation solution 350ml bottles= £4.60

**Prontosan Wound Irrigation Solution**

Aqueous solution containing betaine surfactant and polihexanide

**Prontosan irrigation solution** (B.Braun Medical Ltd) 350ml bottles= £4.96, 40ml unit dose= £14.72

**Specialised dressings****Protease-modulating matrix dressings****Cadesorb Ointment**

**Cadesorb** (Smith & Nephew Healthcare Ltd) ointment= £9.71

**Catrx**

**Catrx dressing** (Cranage Healthcare Ltd) sachets= £3.80

**Promogran**

Collagen and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

**Promogran dressing** (Systagenix Wound Management Ltd) 123 square cm= £15.92, 28 square cm= £5.29

**Promogran Prisma Matrix**

Collagen, silver and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

**Promogran Prisma dressing** (Systagenix Wound Management Ltd) 123 square cm= £18.31, 28 square cm= £6.43

**UrgoStart**

Soft adherent polymer matrix containing nano-oligosaccharide factor (NOSF), with polyurethane foam film backing

**UrgoStart dressing** (Urgo Ltd) 10cm × 10cm= £6.42, 15cm × 20cm= £11.54, 6cm × 6cm= £4.64, 12cm × 19cm heel= £8.84

**UrgoStart Contact**

Non-adherent soft polymer wound contact dressing containing nano-oligosaccharide factor (NOSF)

**UrgoStart** (Urgo Ltd) Contact dressing 5cm × 7cm= £3.07

**Silicone keloid dressings**

Silicone gel and gel sheets are used to reduce or prevent hypertrophic and keloid scarring. They should not be used on open wounds. Application times should be increased gradually. Silicone sheets can be washed and reused.

**Silicone gel****Bapscarcare**

Silicone gel

**Bapscarcare** (Espere Healthcare Ltd) gel= £17.12

**Ciltech**

Silicone gel

**Ciltech** (Su-Med International (UK) Ltd) gel= £50.00

**Dermatix**

Silicone gel

**Dermatix gel** (Meda Pharmaceuticals Ltd)= £60.53

**Kelo-cote UV**

Silicone gel with SPF 30 UV protection

**Kelo-cote** (Alliance Pharmaceuticals Ltd) UV gel= £17.88

**Kelo-cote gel**

Silicone gel

**Kelo-cote** (Alliance Pharmaceuticals Ltd) gel= £51.00

**Kelo-cote spray**

Silicone spray

**Kelo-cote** (Alliance Pharmaceuticals Ltd) spray= £51.00

**ScarSil**

Silicone gel

**ScarSil** (Jobskin Ltd) gel= £15.19

**Silgel STC-SE**

Silicone gel

**Silgel** (Nagor Ltd) STC-SE gel= £19.00

**Silicone sheets****Advasil Conform**

Self-adhesive silicone gel sheet with polyurethane film backing

**Advasil Conform sheet** (Advancis Medical) 10cm × 10cm square= £5.38, 15cm × 10cm rectangular= £9.48

**Bapscarcare T**

Self-adhesive silicone gel sheet

**Bapscarcare T sheet** (Espere Healthcare Ltd) 10cm × 15cm rectangular= £9.07, 5cm × 30cm rectangular= £9.07, 5cm × 7cm rectangular= £3.17

**Cica-Care**

Soft, self-adhesive, semi-occlusive silicone gel sheet with backing

**Cica-Care sheet** (Smith & Nephew Healthcare Ltd) 15cm × 12cm rectangular= £30.02, 6cm × 12cm rectangular= £15.40

**Ciltech**

Silicone gel sheet

**Ciltech sheet** (Su-Med International (UK) Ltd) 10cm × 10cm square= £7.50, 10cm × 20cm rectangular= £12.50, 15cm × 15cm square= £14.00

**Dermatix**

Self-adhesive silicone gel sheet (clear- or fabric-backed)

**Dermatix** (Meda Pharmaceuticals Ltd) Clear sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88, Fabric sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88

**Mepiform**

Self-adhesive silicone gel sheet with polyurethane film backing

**Mepiform sheet** (Molnlycke Health Care Ltd) 4cm × 31cm rectangular= £11.32, 5cm × 7cm rectangular= £3.58, 9cm × 18cm rectangular= £14.01

**Scar FX**

Self-adhesive, transparent, silicone gel sheet

**Scar Fx sheet** (Jobskin Ltd) 10cm × 20cm rectangular= £16.00, 22.5cm × 14.5cm shaped= £12.00, 25.5cm × 30.5cm rectangular= £60.00, 3.75cm × 22.5cm rectangular= £12.00, 7.5cm diameter shaped= £8.50

**Silgel**

Silicone gel sheet

**Silgel sheet** (Nagor Ltd) 10cm × 10cm square= £13.50, 10cm × 30cm rectangular= £31.50, 10cm × 5cm rectangular= £7.50, 15cm × 10cm rectangular= £19.50, 20cm × 20cm square= £40.00, 25cm × 15cm shaped= £21.12, 30cm × 5cm rectangular= £19.50, 40cm × 40cm square= £144.00, 46cm × 8.5cm shaped= £39.46, 5.5cm diameter shaped= £4.00

## Adjunct dressings and appliances

### Surgical absorbents

Surgical absorbents applied directly to the wound have many disadvantages—dehydration of and adherence to the wound, shedding of fibres, and the leakage of exudate ('strike through') with an associated risk of infection. Gauze and cotton absorbent dressings can be used as secondary layers in the management of heavily exuding wounds (but see also Capillary-action dressings). Absorbent cotton gauze fabric can be used for swabbing and cleaning skin. Ribbon gauze can be used post-operatively to pack wound cavities, but adherence to the wound bed will cause bleeding and tissue damage on removal of the dressing—an advanced wound dressing (e.g. hydrocolloid-fibrous, foam, or alginate) layered into the cavity is often more suitable.

#### Cotton

##### Absorbent Cotton, BP

Carded cotton fibres of not less than 10 mm average staple length, available in rolls and balls

**Absorbent** (Robert Bailey & Son Plc) cotton BP 1988

##### Absorbent Cotton, Hospital Quality

As for absorbent cotton but lower quality materials, shorter staple length etc.

**Absorbent** (Robert Bailey & Son Plc) cotton hospital quality

#### Gauze and cotton tissue

##### Gamgee Tissue (blue)

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2

**Gamgee** (Robinson Healthcare) tissue blue label

##### Gamgee Tissue (pink)

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2

**Gamgee** (Robinson Healthcare) tissue pink label DT

#### Gauze and tissue

##### Absorbent Cotton Gauze, BP 1988

Cotton fabric of plain weave, in rolls and as swabs (see below), usually Type 13 light, sterile

**Absorbent** (Robert Bailey & Son Plc) cotton BP 1988

**Alvita** (Alliance Healthcare (Distribution) Ltd) absorbent cotton BP 1988

**Clini** (CliniSupplies Ltd) absorbent cotton BP 1988

**Vernaid** (Synergy Health (UK) Ltd) absorbent cotton BP 1988

##### Absorbent Cotton and Viscose Ribbon Gauze, BP 1988

Woven fabric in ribbon form with fast selvage edges, warp threads of cotton, weft threads of viscose or combined cotton and viscose yarn, sterile

**Vernaid Fast Edge ribbon gauze sterile** (Synergy Health (UK) Ltd) 1.25cm, 2.5cm

#### Lint

##### Absorbent Lint, BPC

Cotton cloth of plain weave with nap raised on one side from warp yarns

**Absorbent** (Robinson Healthcare) lint

**Alvita** (Alliance Healthcare (Distribution) Ltd) absorbent lint BPC

**Clini** (CliniSupplies Ltd) absorbent lint BPC

#### Pads

##### Drisorb

Absorbent Dressing Pads, Sterile

**Drisorb** (Synergy Health (UK) Ltd) dressing pad 10cm × 20cm= £0.17

##### PremierPad

Absorbent Dressing Pads, Sterile

**PremierPad dressing pad** (Shermond) 10cm × 20cm= £0.18, 20cm × 20cm= £0.25

##### XuPad

Absorbent Dressing Pads, Sterile

**Xupad dressing pad** (Richardson Healthcare Ltd) 10cm × 20cm= £0.17, 20cm × 20cm= £0.28, 20cm × 40cm= £0.40

### Wound drainage pouches

Wound drainage pouches can be used in the management of wounds and fistulas with significant levels of exudate.

#### Biotrol Draina S

Wound drainage pouch

**Biotrol Draina S wound drainage bag** (B.Braun Medical Ltd) large (Transparent)= £99.10, medium (Transparent)= £80.58, mini (Transparent)= £80.82

#### Biotrol Draina S Vision

Wound drainage pouch

**Draina S Vision** (B.Braun Medical Ltd) 50 wound drainage bag= £104.98, 75 wound drainage bag= £110.90

#### Eakin Access window

For use with Eakin® pouches

**Eakin** (Pelican Healthcare Ltd) access window large= £39.19

#### Eakin Wound pouch, bung closure

Wound pouch, bung closure

**Eakin wound drainage bag with bung closure** (Pelican Healthcare Ltd) large= £106.37, medium= £78.37, small= £55.98, and access window for horizontal wounds, extra large= £106.37, for horizontal wounds, extra large= £95.17, for vertical incision wounds, extra large= £95.17, wounds, extra large= £95.17

#### Eakin Wound pouch, fold and tuck closure

Wound pouch, fold and tuck closure

**Eakin wound drainage bag with fold and tuck closure** (Pelican Healthcare Ltd) large= £95.17, medium= £72.78, small= £50.38, extra large= £83.97

#### Option Wound Manager

Wound drainage bag

**Option wound manager bag** (Oakmed Ltd) large= £166.06, medium= £139.33, small= £136.30, square= £145.38, extra small= £122.54

#### Option Wound Manager with access port

Wound drainage bag, with access port

**Option wound manager bag with access port** (Oakmed Ltd) large= £177.51, medium= £145.38, small= £142.36, square= £151.44, extra small= £133.99

#### Option Wound Manager, cut to fit

Wound drainage bag, cut to fit

**Option wound manager bag** (Oakmed Ltd) large= £87.30, medium= £83.35, small= £75.24

#### Welland Fistula bag

Wound drainage bag, cut-to-fit

**Welland** (Welland Medical Ltd) Fistula wound drainage bag= £85.20

### Physical debridement pads

Debrisoft® is a pad that is used for the debridement of superficial wounds containing loose slough and debris, and for the removal of hyperkeratosis from the skin. Debrisoft® must be fully moistened with a wound cleansing solution before use and is not appropriate for use as a wound dressing.

#### Debrisoft Pad

Polyester fibres with bound edges and knitted outer surface coated with polyacrylate

**Debrisoft** (Lohmann & Rauscher) pad 10cm × 10cm= £6.69

## Complex adjunct therapies

### Topical negative pressure therapy

#### Accessories

##### Renasys

Soft port and connector

**Renasys** (Smith & Nephew Healthcare Ltd) Soft Port= £11.62, connector for use with soft port= £3.42

#### V.A.C.

Drape, gel for canister, Sensa T.R.A.C. Pad

**Sensa T.R.A.C.** (KCI Medical Ltd) pad= £11.31

**T.R.A.C.** (KCI Medical Ltd) connector= £3.23

**V.A.C.** (KCI Medical Ltd) drape= £9.70, gel strips= £3.88

#### Venturi

Gel patches, adhesive, and connector

**Venturi** (Talley Group Ltd) adhesive gel patch= £15.16, connector= £15.16

#### **WoundASSIST gel strip**

**WoundASSIST** (Huntleigh Healthcare Ltd) TNP gel strip= £3.37

#### *Vacuum assisted closure products*

##### **Exsu-Fast kit 1**

Dressing Kit

**Exsu-Fast** (Synergy Health (UK) Ltd) dressing kit 1= £28.04

##### **Exsu-Fast kit 2**

Dressing Kit

**Exsu-Fast** (Synergy Health (UK) Ltd) dressing kit 2= £35.83

##### **Exsu-Fast kit 3**

Dressing Kit

**Exsu-Fast** (Synergy Health (UK) Ltd) dressing kit 3= £35.83

##### **Exsu-Fast kit 4**

Dressing Kit

**Exsu-Fast** (Synergy Health (UK) Ltd) dressing kit 4= £28.04

#### **V.A.C. GranuFoam**

Polyurethane foam dressing (with adhesive drapes and pad connector); with or without silver

**V.A.C. GranuFoam** (KCI Medical Ltd) Bridge dressing kit= £33.09, Silver with SensaT.R.A.C dressing kit medium= £39.28, small= £33.86, dressing kit large= £32.73, medium= £28.22, small= £23.70

#### **V.A.C. Simplace**

Spiral-cut polyurethane foam dressings, vapour-permeable adhesive film dressings (with adhesive drapes and pad connector)

**V.A.C. Simplace EX dressing kit** (KCI Medical Ltd) medium= £31.58, small= £27.47

#### **V.A.C. WhiteFoam**

Polyvinyl alcohol foam dressing or dressing kit

**V.A.C. WhiteFoam dressing** (KCI Medical Ltd) large= £17.60, small= £10.99, kit large= £34.64, small= £26.76

#### **Venturi**

Wound sealing kit, flat drain; with or without channel drain

**Venturi wound sealing kit with flat drain** (Talley Group Ltd) large= £17.69, standard= £15.16

#### **WoundASSIST**

Wound pack and channel drain

**WoundASSIST TNP dressing pack** (Huntleigh Healthcare Ltd) medium/large= £23.85, small/medium= £20.81, channel drain medium/large= £23.85, small/medium= £20.81, extra large= £34.05

#### *Wound drainage collection devices*

##### **Activ.A.C.**

Canister with gel

**Activ.A.C.** (KCI Medical Ltd) canister with gel= £29.35

##### **S-Canister**

Canister kit

**S-Canister** (Smith & Nephew Healthcare Ltd) kit= £19.00

##### **V.A.C. Freedom**

Canister with gel

**V.A.C.** (KCI Medical Ltd) Freedom Canister with gel= £29.80

#### **Venturi**

Canister kit with solidifier

**Venturi** (Talley Group Ltd) Compact canister kit= £12.64, canister kit= £12.64

#### **WoundASSIST wound pack**

Canister

**WoundASSIST** (Huntleigh Healthcare Ltd) TNP canister= £20.30

## **Wound care accessories**

### **Dressing packs**

The role of dressing packs is very limited. They are used to provide a clean or sterile working surface; some packs shown below include cotton wool balls, which are not recommended for use on wounds.

### **Multiple Pack Dressing No. 1**

Contains absorbent cotton, absorbent cotton gauze type 13 light (sterile), open-wave bandages (banded)

**Vernaid** (Synergy Health (UK) Ltd) multiple pack dressing

#### *Non-drug tariff specification sterile dressing packs*

##### **Dressit**

Vitrex gloves, large apron, disposable bag, paper towel, softswabs, adsorbent pad, sterile field

**Dressit sterile dressing pack** (Richardson Healthcare Ltd) with medium/large gloves= £0.60, small/medium gloves= £0.60

##### **Nurse It**

Contains latex-free, powder-free nitrile gloves, sterile laminated paper sheet, large apron, non-woven swabs, paper towel, disposable bag, compartmented tray, disposable forceps, paper measuring tape

**Nurse It sterile dressing pack** (Medicareplus International Ltd) with medium/large gloves= £0.55, small/medium gloves= £0.55

##### **Polyfield Nitrile Patient Pack**

Contains powder-free nitrile gloves, laminate sheet, non-woven swabs, towel, polythene disposable bag, apron

**Polyfield Nitrile Patient Pack** (Shermond) with large gloves= £0.52, medium gloves= £0.52, small gloves= £0.52

#### *Sterile Dressing Pack with Non-Woven Pads*

##### **Vernaid**

(Drug Tariff specification 35). Contains non-woven fabric covered dressing pad, non-woven fabric swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper

**Vernaid** (Synergy Health (UK) Ltd) sterile dressing pack with non-woven pads

#### *Sterile dressing packs*

##### **Vernaid**

(Drug Tariff specification 10). Contains gauze and cotton tissue pad, gauze swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper

**Vernaid** (Synergy Health (UK) Ltd) sterile dressing pack

### **Woven and fabric swabs**

#### **Gauze Swab, PB 1988**

Consists of absorbent cotton gauze type 13 light or absorbent cotton and viscose gauze type 1 folded into squares or rectangles of 8-ply with no cut edges exposed, sterile or non-sterile

**Alvita gauze swab 8ply** (Alliance Healthcare (Distribution) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**CS** (CliniSupplies Ltd) gauze swab 8ply non-sterile 10cm × 10cm

**Clini gauze swab 8ply** (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Gauze** (Robert Bailey & Son Plc) swab 8ply non-sterile 10cm × 10cm

**MeCoBo gauze swab 8ply** (MeCoBo Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Propag gauze** (BSN medical Ltd) swab 8ply sterile 7.5cm × 7.5cm

**Sovereign** (Waymade Healthcare Plc) gauze swab 8ply sterile 7.5cm × 7.5cm

**Steraid** (Robert Bailey & Son Plc) gauze swab 8ply sterile 7.5cm × 7.5cm

**Vernaid gauze swab 8ply** (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

#### **Non-woven Fabric Swab**

(Drug Tariff specification 28). Consists of non-woven fabric folded 4-ply; alternative to gauze swabs, type 13 light, sterile or non-sterile

**CS** (CliniSupplies Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

**Clini non-woven fabric swab 4ply** (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**CliniMed** (CliniMed Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

**MeCoBo** (MeCoBo Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

**Multisorb** (BSN medical Ltd) non-woven fabric swab 4ply sterile 7.5cm × 7.5cm

**Sofisorb non-woven fabric swab 4ply** (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Softswab non-woven fabric swab 4ply** (Richardson Healthcare Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Topper** (Systagenix Wound Management Ltd) 8 non-woven fabric swab 4ply non-sterile 10cm × 10cm

*Filmated non-woven Fabric Swab*

#### **Regal**

(Drug Tariff specification 29). Film of viscose fibres enclosed within non-woven viscose fabric folded 8-ply, non-sterile

**Regal** (Systagenix Wound Management Ltd) filmated swab 8ply 10cm × 10cm

#### **Surgical adhesive tapes**

Adhesive tapes are useful for retaining dressings on joints or awkward body parts. These tapes, particularly those containing rubber, can cause irritant and allergic reactions in susceptible patients; synthetic adhesives have been developed to overcome this problem, but they, too, may sometimes be associated with reactions. Synthetic adhesive, or silicon adhesive, tapes can be used for patients with skin reactions to plasters and strapping containing rubber, or undergoing prolonged treatment.

Adhesive tapes that are occlusive may cause skin maceration. Care is needed not to apply these tapes under tension, to avoid creating a tourniquet effect. If applied over joints they need to be orientated so that the area of maximum extensibility of the fabric is in the direction of movement of the limb.

#### *Occlusive adhesive tapes*

##### **Blenderm**

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with a polymeric adhesive mass

**Blenderm tape** (3M Health Care Ltd) 2.5cm= £1.80, 5cm= £3.43

##### **Sleek**

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with an adhesive mass

**Leukoplast Sleek tape** (BSN medical Ltd) 2.5cm, 5cm, 7.5cm

#### *Permeable adhesive tapes*

##### **3M Kind Removal Silicone Tape**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**3M Micropore Silicone tape** (3M Health Care Ltd) 2.5cm= £3.65, 5cm= £6.60

##### **Chemifix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Chemifix tape** (Medicareplus International Ltd) 10cm= £2.10, 2.5cm= £0.90, 5cm= £1.40

##### **Chemipore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Chemipore tape** (Medicareplus International Ltd) 1.25cm= £0.27, 2.5cm= £0.70, 5cm= £0.95

##### **Clinipore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Clinipore tape** (CliniSupplies Ltd) 1.25cm= £0.36, 2.5cm= £0.74, 5cm= £1.01

##### **Elastoplast**

(Elastic Adhesive Tape, BP 1988). Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads, spread with adhesive mass containing zinc oxide

**Tensoplast** (BSN medical Ltd) elastic adhesive tape 2.5cm

##### **Hypafix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Hypafix tape** (BSN medical Ltd) 10cm= £4.80, 15cm= £7.11, 2.5cm= £1.73, 20cm= £9.43, 30cm= £13.63, 5cm= £2.75

##### **Insil**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Insil tape** (Insight Medical Products Ltd) 2cm= £5.77, 4cm= £5.77

##### **Leukofix**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Leukofix tape** (BSN medical Ltd) 1.25cm= £0.57, 2.5cm= £0.92, 5cm= £1.61

##### **Leukopor**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Leukopor tape** (BSN medical Ltd) 1.25cm= £0.51, 2.5cm= £0.79, 5cm= £1.39

##### **Medioplast**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988).

Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Medioplast tape** (Neomedic Ltd) 1.25cm= £0.30, 2.5cm= £0.50

##### **Medioplast**

Fabric, plain weave, warp and weft of cotton and/or viscose,

spread with an adhesive containing zinc oxide

**Medioplast Zinc Oxide plaster** (Neomedic Ltd) 1.25cm= £0.82, 2.5cm= £1.19, 5cm= £1.99, 7.5cm= £2.99

##### **Mefix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Mefix tape** (Molnlycke Health Care Ltd) 10cm= £3.00, 15cm= £4.08, 2.5cm= £1.06, 20cm= £5.23, 30cm= £7.50, 5cm= £1.87

##### **Mepitac**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Mepitac tape** (Molnlycke Health Care Ltd) 2cm= £7.19, 4cm= £7.19

##### **Micropore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988).

Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Micropore tape** (3M Health Care Ltd) 1.25cm= £0.63, 2.5cm= £0.93, 5cm= £1.65

##### **Omnifix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Omnifix tape** (Paul Hartmann Ltd) 10cm= £4.23, 15cm= £6.24, 5cm= £2.51

##### **OpSite Flexifix Gentle**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**OpSite Flexifix Gentle tape** (Smith & Nephew Healthcare Ltd) 2.5cm= £10.71, 5cm= £20.09

##### **Primafix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Primafix tape** (Smith & Nephew Healthcare Ltd) 10cm= £2.46, 15cm= £3.63, 20cm= £4.47, 5cm= £1.67

##### **Scanpor**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Scanpor tape** (Bio-Diagnostics Ltd) 1.25cm= £0.57, 2.5cm= £0.93, 5cm= £1.78, 7.5cm= £2.61

**Siltape**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Siltape** (Advancis Medical) 2cm= £5.79, 4cm= £5.79

**Strappal**

Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

**Strappal adhesive tape** (BSN medical Ltd) 2.5cm= £1.44, 5cm= £2.43, 7.5cm= £3.66

**Transpore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Transpore tape** (3M Health Care Ltd) 2.5cm= £0.86, 5cm= £1.51

**Zinc Oxide Adhesive Tape, BP 1988**

Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

**Fast Aid zinc oxide adhesive tape** (Robinson Healthcare) 1.25cm, 2.5cm, 5cm, 7.5cm

**Skin closure dressings**

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

*Skin closure strips, sterile***Leuko-strip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Leuko-strip** (Smith & Nephew Healthcare Ltd) skin closure strips 6.4mm × 76mm= £6.64

**Omnistrip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Omnistrip** (Paul Hartmann Ltd) skin closure strips sterile 6mm × 76mm= £25.21

**Steri-strip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Steri-strip** (3M Health Care Ltd) skin closure strips 6mm × 75mm= £8.93

**Bandages****Non-extensible bandages**

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

**Open-weave Bandage, Type 1 BP 1988**

Cotton cloth, plain weave, warp of cotton, weft of cotton, viscose, or combination, one continuous length

**Clini open weave Bandage Type 1 BP 1988** (CliniSupplies Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**Vernaid white open weave bandage** (Synergy Health (UK) Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**White open weave bandage** (Robert Bailey & Son Plc) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**Triangular Calico Bandage, BP 1980**

Unbleached calico right-angled triangle

**Clini** (CliniSupplies Ltd) triangular calico bandage BP 1980 90cm × 127cm

**Triangular** (BSN medical Ltd) calico bandage 90cm × 127cm

**Light-weight conforming bandages**

Lightweight conforming bandages are used for dressing retention, with the aim of keeping the dressing close to the wound without inhibiting movement or restricting blood flow. The elasticity of conforming-stretch bandages (also termed contour bandages) is greater than that of cotton conforming bandages.

**Acti-Wrap**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Acti-Wrap (cohesive/latex free) bandage** (L&R Medical UK Ltd) 10cm × 4m= £0.85, 6cm × 4m= £0.49, 8cm × 4m= £0.72

**Cotton Conforming Bandage, BP 1988**

Cotton fabric, plain weave, treated to impart some elasticity to warp and weft

**Easifix**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Easifix bandage** (BSN medical Ltd) 10cm × 4m= £0.52, 15cm × 4m= £0.89, 5cm × 4m= £0.36, 7.5cm × 4m= £0.44

**Easifix K**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

**Easifix K bandage** (BSN medical Ltd) 10cm × 4m= £0.19, 15cm × 4m= £0.33, 2.5cm × 4m= £0.10, 5cm × 4m= £0.11, 7.5cm × 4m= £0.17

**Hospiform**

Fabric, plain weave, warp of polyamide, weft of viscose

**Hospiform bandage** (Paul Hartmann Ltd) 10cm × 4m= £0.20, 12cm × 4m= £0.25, 6cm × 4m= £0.14, 8cm × 4m= £0.18

**K-Band**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

**K-Band bandage** (Urgo Ltd) 10cm × 4m= £0.29, 15cm × 4m= £0.52, 5cm × 4m= £0.21, 7cm × 4m= £0.27

**Stayform bandage** (Robinson Healthcare) 10cm × 4m= £0.40, 15cm × 4m= £0.69, 5cm × 4m= £0.29, 7.5cm × 4m= £0.36

**Tubular bandages and garments**

Tubular bandages are available in different forms, according to the function required of them. Some are used under orthopaedic casts and some are suitable for protecting areas to which creams or ointments (other than those containing potent corticosteroids) have been applied. The conformability of the elasticated versions makes them particularly suitable for retaining dressings on difficult parts of the body or for soft tissue injury, but their use as the only means of applying pressure to an oedematous limb or to a varicose ulcer is not appropriate, since the pressure they exert is inadequate. Compression hosiery reduces the recurrence of venous leg ulcers and should be considered for use after wound healing. Silk clothing is available as an alternative to elasticated viscose stockinette garments, for use in the management of severe eczema and allergic skin conditions.

*Elasticated Surgical Tubular Stockinette, Foam padded* is used for relief of pressure and elimination of friction in relevant area; porosity of foam lining allows normal water loss from skin surface.

For *Elasticated Tubular Bandage, BP 1993*, where no size stated by the prescriber, the 50 cm length should be supplied and width endorsed.

*Non-elasticated Cotton Stockinette, Bleached, BP 1988* 1m lengths is used as basis (with wadding) for Plaster of Paris bandages etc.; 6 m length, compression bandage.

For *Non-elasticated Ribbed Cotton and Viscose Surgical Tubular Stockinette, BP 1988*, the Drug Tariff specifies various combinations of sizes to provide sufficient material for part or full body coverage. It is used as protective dressings with tar-based and other steroid ointments.

**Elasticated****Acti-Fast**

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage

**Acti-Fast 2-way stretch stockinette** (L&R Medical UK Ltd) 10.75cm= £5.80, 17.5cm= £1.87, 20cm= £3.26, 3.5cm= £0.57, 5cm= £0.59, 7.5cm= £0.78

**Support bandages**

Light support bandages, which include the various forms of crepe bandage, are used in the prevention of oedema; they are also used to provide support for mild sprains and joints but their effectiveness has not been proven for this purpose. Since they have limited extensibility, they are able to provide light support without exerting undue pressure. For a warning against injudicious compression see Compression bandages.

**CliniLite**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**CliniLite bandage** (CliniSupplies Ltd) 10cm × 4.5m = £0.81, 15cm × 4.5m = £1.18, 5cm × 4.5m = £0.45, 7.5cm × 4.5m = £0.62

#### **Knit-Firm**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Knit-Firm bandage** (Millpledge Healthcare) 10cm × 4.5m= £0.66, 15cm × 4.5m= £0.96, 5cm × 4.5m= £0.36, 7cm × 4.5m= £0.51

#### **L3**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**L3** (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.6m= £2.31

#### **Neosport**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Neosport bandage** (Neomedic Ltd) 10cm × 4.5m= £0.91, 15cm × 4.5m= £1.12, 5cm × 4.5m= £0.54, 7.5cm × 4.5m= £0.73

#### **PremierBand**

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton threads; stretch bandage, lighter than cotton crepe, 4.5 m stretched (all)

**PremierBand bandage** (Shermond) 10cm × 4.5m= £0.79, 15cm × 4.5m= £1.18, 5cm × 4.5m= £0.45, 7.5cm × 4.5m= £0.63

#### **Profore #2**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Profore #2** (Smith & Nephew Healthcare Ltd) bandage 10cm × 4.5m= £1.42, latex free bandage 10cm × 4.5m= £1.50

#### **Profore #3**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Profore #3** (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.7m= £4.13, latex free bandage 10cm × 8.7m= £4.49

#### **Setocrepe**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Setocrepe** (Molnlycke Health Care Ltd) bandage 10cm × 4.5m= £1.24

#### **Soffcrepe**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Soffcrepe bandage** (BSN medical Ltd) 10cm × 4.5m= £1.29, 15cm × 4.5m= £1.87, 5cm × 4.5m= £0.72, 7.5cm × 4.5m= £1.02

#### **Adhesive bandages**

Elastic adhesive bandages are used to provide compression in the treatment of varicose veins and for the support of injured joints; they should no longer be used for the support of fractured ribs and clavicles. They have also been used with zinc paste bandage in the treatment of venous ulcers, but

they can cause skin reactions in susceptible patients and may not produce sufficient pressures for healing (significantly lower than those provided by other compression bandages).

#### **Elastic Adhesive Bandage, BP 1993**

Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads spread with adhesive mass containing zinc oxide. 4.5 m stretched

**Tensoplast bandage** (BSN medical Ltd) 10cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

#### **Cohesive bandages**

Cohesive bandages adhere to themselves, but not to the skin, and are useful for providing support for sports use where ordinary stretch bandages might become displaced and adhesive bandages are inappropriate. Care is needed in their application, however, since the loss of ability for movement between turns of the bandage to equalise local areas of high tension carries the potential for creating a tourniquet effect. Cohesive bandages can be used to support sprained joints and as an outer layer for multi-layer compression bandaging; they should not be used if arterial disease is suspected.

#### *Cohesive extensible bandages*

##### **Coban**

Bandage

**Coban** (3M Health Care Ltd) self-adherent bandage 10cm × 6m= £2.98

##### **K Press**

Bandage

**K Press bandage** (Urgo Ltd) 10cm × 6.5m, 10cm × 7.5m, 12cm × 7.5m, 8cm × 7.5cm

##### **Profore #4**

Bandage

**Profore #4** (Smith & Nephew Healthcare Ltd) bandage 10cm × 2.5m= £3.41, latex free bandage 10cm × 2.5m= £3.71

##### **Ultra Fast**

Bandage

**Ultra** (Robinson Healthcare) Fast cohesive bandage 10cm × 6.3m= £2.62

#### **Compression bandages**

High compression products are used to provide the high compression needed for the management of gross varices, post-thrombotic venous insufficiency, venous leg ulcers, and gross oedema in average-sized limbs. Their use calls for an expert knowledge of the elastic properties of the products and experience in the technique of providing careful graduated compression. Incorrect application can lead to uneven and inadequate pressures or to hazardous levels of pressure. In particular, injudicious use of compression in limbs with arterial disease has been reported to cause severe skin and tissue necrosis (in some instances calling for amputation). Doppler testing is required before treatment with compression. Oral pentoxifylline p. 249 can be used as adjunct therapy if a chronic venous leg ulcer does not respond to compression bandaging [unlicensed indication].

#### *High compression bandages*

##### **High Compression Bandage**

Cotton, viscose, nylon, and Lycra<sup>®</sup> extensible bandage, 3 m (unstretched)

**K-ThreeC** (Urgo Ltd) bandage 10cm × 3m= £2.95

**SurePress** (ConvaTec Ltd) bandage 10cm × 3m= £3.80

##### **PEC High Compression Bandages**

Polyamide, elastane, and cotton compression (high) extensible bandage, 3.5 m unstretched

**Setopress** (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £3.66

##### **VEC High Compression Bandages**

Viscose, elastane, and cotton compression (high) extensible bandage, 3 m unstretched (both)

**Tensopress bandage** (BSN medical Ltd) 10cm × 3m= £3.63, 7.5cm × 3m= £2.82

*Short stretch compression bandages***Actico**

## Bandage

**Actico bandage** (L&R Medical UK Ltd) 10cm × 6m= £3.47, 12cm × 6m= £4.43, 4cm × 6m= £2.48, 6cm × 6m= £2.91, 8cm × 6m= £3.34

**Comprilan**

## Bandage

**Comprilan bandage** (BSN medical Ltd) 10cm × 5m= £3.55, 12cm × 5m= £4.32, 6cm × 5m= £2.81, 8cm × 5m= £3.30

**Rosidal K**

## Bandage

**Rosidal K bandage** (Lohmann & Rauscher) 10cm × 10m= £6.24, 10cm × 5m= £3.58, 12cm × 5m= £4.35, 6cm × 5m= £2.75, 8cm × 5m= £3.28

*Sub-compression wadding bandage***Cellona Undercast Padding**

## Padding

**Cellona Undercast padding bandage** (Lohmann & Rausche) 10cm × 2.75m= £0.49, 15cm × 2.75m= £0.63, 5cm × 2.75m= £0.32, 7.5cm × 2.75m= £0.39

**Flexi-Ban**

## Padding

**Flexi-Ban** (L&R Medical UK Ltd) bandage 10cm × 3.5m= £0.52

**K-Soft**

## Padding

**K-Soft** (Urgo Ltd) Long bandage 10cm × 4.5m= £0.59, bandage 10cm × 3.5m= £0.47

**Ortho-Band Plus**

## Padding

**Ortho-Band** (Millpledge Healthcare) Plus bandage 10cm × 3.5m= £0.37

**Profore #1**

## Padding

**Profore #1** (Smith & Nephew Healthcare Ltd) bandage 10cm × 3.5m= £0.74, latex free bandage 10cm × 3.5m= £0.80

**Softex**

## Padding

**Softex** (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £0.62

**SurePress**

## Padding

**SurePress** (ConvaTec Ltd) bandage 10cm × 3m= £3.80

**Ultra Soft**

## Padding

**Ultra** (Robinson Healthcare) Soft wadding bandage 10cm × 3.5m= £0.39

**Velband**

## Padding

**Velband** (BSN medical Ltd) absorbent padding bandage 10cm × 4.5m= £0.75

**Multi-layer compression bandaging**

Multi-layer compression bandaging systems are an alternative to High Compression Bandages for the treatment of venous leg ulcers. Compression is achieved by the combined effects of two or three extensible bandages applied over a layer of orthopaedic wadding and a wound contact dressing.

*Four layer systems***K-Four**

## Padding

**K-Four**

Multi-layer compression bandaging kit, four layer system  
**K-Four** (Urgo Ltd) Reduced Compression multi-layer compression bandage kit 18cm+ ankle circumference= £4.66, multi-layer compression bandage kit 18cm-25cm ankle circumference= £7.13, 25cm-30cm ankle circumference= £7.13, greater than 30cm ankle circumference= £9.82, less than 18cm ankle circumference= £7.45

**Profore**

Wound contact layer

**Profore**

Multi-layer compression bandaging kit, four layer system  
**Profore** (Smith & Nephew Healthcare Ltd) Lite latex free multi-layer compression bandage kit= £6.25, multi-layer compression bandage kit= £5.75, latex free multi-layer compression bandage kit 18cm-25cm ankle circumference= £10.64, multi-layer compression bandage kit 18cm-25cm ankle circumference= £9.96, 25cm-30cm ankle circumference= £8.27, above 30cm ankle circumference= £12.38, up to 18cm ankle circumference= £10.69

**Ultra Four**

Wound contact layer

**Ultra Four**

Multi-layer compression bandaging kit, four layer system  
**Ultra Four** (Robinson Healthcare) Reduced Compression multi-layer compression bandage kit= £4.19, multi-layer compression bandage kit 18cm-25cm ankle circumference= £5.73, up to 18cm ankle circumference= £6.48

*Two layer systems***Coban 2**

Multi-layer compression bandaging kit, two layer system (latex-free, foam bandage and cohesive compression bandage)

**Coban 2** (3M Health Care Ltd) Lite multi-layer compression bandage kit= £8.40, multi-layer compression bandage kit 10cm × 3.5m= £8.40

**K Two**

Multi-layer compression bandaging kit, two layer system  
**UrgoKTwo** (Urgo Ltd) Reduced latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.87, 25cm-32cm ankle circumference= £9.69, Reduced multi-layer compression bandage kit 18cm-25cm ankle circumference= £8.35, 25cm-32cm ankle circumference= £9.13, latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.87, 25cm-32cm ankle circumference= £9.69, multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.35, 25cm-32cm ankle circumference= £9.13, multi-layer compression bandage kit (12cm) 18cm-25cm ankle circumference= £10.53, 25cm-32cm ankle circumference= £11.51, multi-layer compression bandage kit (8cm) 18cm-25cm ankle circumference= £7.88, 25cm-32cm ankle circumference= £8.57, multi-layer compression bandage kit size 0 short 18cm-25cm ankle circumference= £7.05, with UrgoStart multi-layer compression bandage kit 18cm-25cm ankle circumference= £10.41, 25cm-32cm ankle circumference= £11.10

**Medicated bandages**

Zinc Paste Bandage has been used with compression bandaging for the treatment of venous leg ulcers. However, paste bandages are associated with hypersensitivity reactions and should be used with caution. Zinc paste bandages are also used with coal tar or ichthammol in chronic lichenified skin conditions such as chronic eczema (ichthammol often being preferred since its action is considered to be milder). They are also used with calamine in milder eczematous skin conditions.

**Zipzoc**® can be used under appropriate compression bandages or hosiery in chronic venous insufficiency.

**Zinc Paste Bandage, BP 1993**

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide; requires additional bandaging  
*Excipients: may include* cetostearyl alcohol, hydroxybenzoates

**Viscopaste** (Evolan Pharma AB) PB7 bandage 7.5cm × 6m= £3.84

**Zinc Paste and Ichthammol Bandage, BP 1993**

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide and ichthammol; requires additional bandaging  
*Excipients: may include* cetostearyl alcohol

**Ichthopaste** (Evolan Pharma AB) bandage 7.5cm × 6m= £3.87

**Zipzoc**

Sterile rayon stocking impregnated with ointment containing zinc oxide 20%

**Zipzoc** (Evolan Pharma AB) stockings= £34.70

### Compression hosiery and garments

Compression (elastic) hosiery is used to treat conditions associated with chronic venous insufficiency, to prevent recurrence of thrombosis, or to reduce the risk of further venous ulceration after treatment with compression bandaging. Doppler testing to confirm arterial sufficiency is required before recommending the use of compression hosiery.

Before elastic hosiery can be dispensed, the quantity (single or pair), article (including accessories), and compression class must be specified by the prescriber. There are different compression values for graduated compression hosiery and lymphoedema garments (see table below). All dispensed elastic hosiery articles must state on the packaging that they conform with Drug Tariff technical specification No. 40, for further details see Drug Tariff.

*Graduated Compression hosiery, Class 1 Light Support* is used for superficial or early varices, varicosis during pregnancy.

*Graduated Compression hosiery, Class 2 Medium Support* is used for varices of medium severity, ulcer treatment and prophylaxis, mild oedema, varicosis during pregnancy.

*Graduated Compression hosiery, Class 3 Strong Support* is used for gross varices, post thrombotic venous insufficiency, gross oedema, ulcer treatment and prophylaxis.

#### Compression values for hosiery and lymphoedema

**garments** *Class 1:* Compression hosiery (British standard) 14–17 mmHg, lymphoedema garments (European classification) 18–21 mmHg; *Class 2* Compression hosiery (British standard) 18–24 mmHg, lymphoedema garments (European classification) 23–32 mmHg; *Class 3* Compression hosiery (British standard) 25–35 mmHg, lymphoedema garments (European classification) 34–46 mmHg; *Class 4* Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 49–70 mmHg; *Class 4 super* Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 60–90 mmHg.

#### Graduated compression hosiery

##### Class 1 Light Support

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

##### Class 2 Light Support

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

#### Accessories

##### Suspender

Suspender, for thigh stockings

#### Anklets

##### Class 2 Medium Support

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

##### Class 3 Strong Support

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

#### Knee caps

##### Class 2 Medium Support

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

##### Class 3 Strong Support

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

#### Lymphoedema garments

Lymphoedema compression garments are used to maintain limb shape and prevent additional fluid retention. Either flat-bed or circular knitting methods are used in the manufacture of elasticated compression garments. Seamless, circular-knitted garments (in standard sizes) can be used to prevent swelling if the lymphoedema is well controlled and if

the limb is in good shape and without skin folds. Flat-knitted garments (usually made-to-measure) with a seam, provide greater rigidity and stiffness to maintain reduction of lymphoedema following treatment with compression bandages. A standard range of light, medium, or high compression garments are available, as well as low compression (12–16 mmHg) armsleeves, made-to-measure garments up to compression 90 mmHg, and accessories—see Drug Tariff for details. Note, there are different compression values for lymphoedema garments and graduated compression hosiery, see Compression hosiery and garments above.

# Dental Practitioners' Formulary

## List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).

Licensed **sugar-free** versions, where available, are preferred. Licensed **alcohol-free** mouthwashes, where available, are preferred.

Aciclovir Cream, BP  
 Aciclovir Oral Suspension, BP, 200 mg/5 mL  
 Aciclovir Tablets, BP, 200 mg  
 Aciclovir Tablets, BP, 800 mg  
 Amoxicillin Capsules, BP  
 Amoxicillin Oral Powder, DPF  
 Amoxicillin Oral Suspension, BP  
 Artificial Saliva Gel, DPF  
 Artificial Saliva Oral Spray, DPF  
 Artificial Saliva Pastilles, DPF  
 Artificial Saliva Protective Spray, DPF  
 Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or, having undergone, radiotherapy or sicca syndrome):  
*BioXtra*<sup>®</sup> Gel Mouthspray  
*BioXtra*<sup>®</sup> Moisturising Gel  
*Glandosane*<sup>®</sup>  
*Saliveze*<sup>®</sup>  
 Artificial Saliva Substitute Spray, DPF  
 Aspirin Tablets, Dispersible, BP  
 Azithromycin Capsules, 250 mg, DPF  
 Azithromycin Oral Suspension, 200 mg/5 mL, DPF  
 Azithromycin Tablets, 250 mg, DPF  
 Azithromycin Tablets, 500 mg, DPF  
 Beclometasone Pressurised Inhalation, BP,  
 50 micrograms/metered inhalation, CFC-free, as:  
*Clenil Modulite*<sup>®</sup>  
 Benzydamine Mouthwash, BP 0.15%  
 Benzydamine Oromucosal Spray, BP 0.15%  
 Betamethasone Soluble Tablets, 500 micrograms, DPF  
 Carbamazepine Tablets, BP  
 Cefalexin Capsules, BP  
 Cefalexin Oral Suspension, BP  
 Cefalexin Tablets, BP  
 Cefradine Capsules, BP  
 Cetirizine Oral Solution, BP, 5 mg/5 mL  
 Cetirizine Tablets, BP, 10 mg  
 Chlorhexidine Gluconate Gel, BP  
 Chlorhexidine Mouthwash, BP  
 Chlorhexidine Oral Spray, DPF  
 Chlorphenamine Oral Solution, BP  
 Chlorphenamine Tablets, BP  
 Choline Salicylate Dental Gel, BP  
 Clarithromycin Oral Suspension, 125 mg/5 mL, DPF  
 Clarithromycin Oral Suspension, 250 mg/5 mL, DPF  
 Clarithromycin Tablets, BP  
 Clindamycin Capsules, BP  
 Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)  
 Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as potassium salt)/5 mL  
 Co-amoxiclav Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL  
 Diazepam Oral Solution, BP, 2 mg/5 mL  
 Diazepam Tablets, BP

Diclofenac Sodium Tablets, Gastro-resistant, BP  
 Dihydrocodeine Tablets, BP, 30 mg  
 Doxycycline Tablets, Dispersible, BP  
 Doxycycline Capsules, BP, 100 mg  
 Doxycycline Tablets, 20 mg, DPF  
 Ephedrine Nasal Drops, BP  
 Erythromycin Ethyl Succinate Oral Suspension, BP  
 Erythromycin Ethyl Succinate Tablets, BP  
 Erythromycin Stearate Tablets, BP  
 Erythromycin Tablets, Gastro-resistant, BP  
 Fluconazole Capsules, 50 mg, DPF  
 Fluconazole Oral Suspension, 50 mg/5 mL, DPF  
 Hydrocortisone Cream, BP, 1%  
 Hydrocortisone Oromucosal Tablets, BP  
 Hydrogen Peroxide Mouthwash, BP, 6%  
 Ibuprofen Oral Suspension, BP, sugar-free  
 Ibuprofen Tablets, BP  
 Lansoprazole Capsules, Gastro-resistant, BP  
 Lidocaine Ointment, BP, 5%  
 Lidocaine Spray 10%, DPF  
 Loratadine Syrup, 5 mg/5 mL, DPF  
 Loratadine Tablets, BP, 10 mg  
 Menthol and Eucalyptus Inhalation, BP 1980  
 Metronidazole Oral Suspension, BP  
 Metronidazole Tablets, BP  
 Miconazole Cream, BP  
 Miconazole Oromucosal Gel, BP  
 Miconazole and Hydrocortisone Cream, BP  
 Miconazole and Hydrocortisone Ointment, BP  
 Nystatin Oral Suspension, BP  
 Omeprazole Capsules, Gastro-resistant, BP  
 Oxytetracycline Tablets, BP  
 Paracetamol Oral Suspension, BP  
 Paracetamol Tablets, BP  
 Paracetamol Tablets, Soluble, BP  
 Phenoxymethylpenicillin Oral Solution, BP  
 Phenoxymethylpenicillin Tablets, BP  
 Promethazine Hydrochloride Tablets, BP  
 Promethazine Oral Solution, BP  
 Saliva Stimulating Tablets, DPF  
 Sodium Chloride Mouthwash, Compound, BP  
 Sodium Fluoride Mouthwash, BP  
 Sodium Fluoride Oral Drops, BP  
 Sodium Fluoride Tablets, BP  
 Sodium Fluoride Toothpaste 0.619%, DPF  
 Sodium Fluoride Toothpaste 1.1%, DPF  
 Sodium Fusidate Ointment, BP  
 Temazepam Oral Solution, BP  
 Temazepam Tablets, BP  
 Tetracycline Tablets, BP  
 Preparations in this list which are not included in the BP or BPC are described under Details of DPF preparations. For details of preparations that can be prescribed, see individual entries under the relevant drug monographs throughout the BNF publications.

## Details of DPF preparations

Preparations on the List of Dental Preparations which are specified as DPF are described as follows in the DPF. Although brand names have sometimes been included for identification purposes preparations on the list should be prescribed by non-proprietary name.

### Amoxicillin Oral Powder

amoxicillin (as trihydrate) 3 g sachet

**Artificial Saliva Gel**

consists of lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

**Artificial Saliva Oral Spray**

(proprietary product: *Xerotin*) consists of water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral

**Artificial Saliva Pastilles**

(proprietary product: *Salivix*), consists of acacia, malic acid, and other ingredients

**Artificial Saliva Protective Spray**

(proprietary product: *Aequasyl*) consists of oxidised glycerol triesters, silicon dioxide, flavouring agents, aspartame

**Artificial Saliva Substitute Spray**

(proprietary product: *AS Saliva Orthana Spray*) consists of mucin, methylparaben, benzalkonium chloride, EDTA, xylitol, peppermint oil, spearmint oil, mineral salts

**Azithromycin Capsules**

azithromycin 250 mg

**Azithromycin Oral Suspension 200 mg/5 mL**

azithromycin 200 mg/5 mL when reconstituted with water

**Azithromycin Tablets**

azithromycin 250 mg and 500 mg

**Betamethasone Soluble Tablets 500 micrograms**

betamethasone (as sodium phosphate) 500 micrograms

**Chlorhexidine Oral Spray**

(proprietary product: *Corsodyl Oral Spray*), chlorhexidine gluconate 0.2%

**Clarithromycin Oral Suspension 125 mg/5 mL**

clarithromycin 125 mg/5 mL when reconstituted with water

**Clarithromycin Oral Suspension 250 mg/5 mL**

clarithromycin 250 mg/5 mL when reconstituted with water

**Doxycycline Tablets 20 mg**

(proprietary product: *Periostat*), doxycycline (as hyclate) 20 mg

**Fluconazole Capsules 50 mg**

fluconazole 50 mg

**Fluconazole Oral Suspension 50 mg/5 mL**

(proprietary product: *Diflucan*), fluconazole 50 mg/5 mL when reconstituted with water

**Lidocaine Spray 10%**

(proprietary product: *Xylocaine Spray*), lidocaine 10% supplying 10 mg lidocaine/spray

**Loratadine Syrup 5 mg/5 mL**

loratadine 5 mg/5 mL

**Saliva Stimulating Tablets**

(proprietary product: *SST*), citric acid, malic acid and other ingredients in a sorbitol base

**Sodium Fluoride Toothpaste 0.619%**

(proprietary product: *Duraphat '2800 ppm' Toothpaste*), sodium fluoride 0.619%

**Sodium Fluoride Toothpaste 1.1%**

(proprietary product: *Duraphat '5000 ppm' Toothpaste*), sodium fluoride 1.1%

# Approved list for prescribing by Community Practitioner Nurse Prescribers (NPF)

## Nurse Prescribers' Formulary for Community Practitioners

The Nurse Prescribers' Formulary for Community Practitioners is for use by District Nurses and Specialist Community Public Health Nurses (including Health Visitors) who have received nurse prescriber training. It provides a list of preparations approved by the Secretary of State that can be prescribed for patients receiving NHS treatment on form FP10P (form HS21(N) in Northern Ireland, form GP10(N) in Scotland, forms WP10CN and WP10PN in Wales). Community practitioner nurse prescribers should only prescribe items appearing in the nurse prescribers' list set out below (for the indications specified). Most medicinal preparations should be prescribed generically, except where this would not be clinically appropriate or where there is no approved generic name—see individual entries for further information.

The Nurse Prescribers' Advisory Group p. vii oversees the preparation of the NPF and advises UK health ministers on the list of preparations that may be prescribed by community practitioner nurse prescribers. Feedback from nurse prescribers is welcome and will be taken into account when reviewing this list; comments and constructive criticism should be sent to editor@bnf.org.

## How to use the NPF

The list of medicinal preparations includes:

- Links to BNF monographs to allow full prescribing information for each preparation to be accessed;
- Details of the indications for which each medicinal preparation can be prescribed;
- Signposting to doses for community practitioner nurse prescribers where these differ from those in the BNF for the specified indications;
- Additional information that should be considered before prescribing certain preparations.

The NPF should be used in conjunction with BNF monographs to ensure that all relevant prescribing information is considered when prescribing decisions are made; links to the relevant BNF monographs allow quick access to this prescribing information. Most of the doses that can be prescribed by nurse prescribers for the specified indications are in line with those in BNF monographs, so the BNF doses for those indications can be used. If doses that can be prescribed by nurse prescribers differ from those in the BNF, specific indications and doses have been added to BNF monographs. These can be found towards the bottom of indication and dose sections of the relevant monographs with the statement "dose approved for use by community practitioner nurse prescribers" following the indication; individual preparation entries signpost to these doses.

General guidance for community practitioner nurse prescribers (Nurse Prescribers' Formulary—General guidance) includes information on prescribing for nurse prescribers and can be found in online versions of the BNF and the BNF app. Treatment summaries for nurse prescribers (e.g. Nurse Prescribers' Formulary—Analgesics) can also be found in online versions of the BNF and the BNF app; these provide an overview of the drug management or prophylaxis

of conditions that are commonly managed by nurse prescribers and/or information on the use of appliances, such as stoma appliances. In order to select safe and effective medicines for individual patients, information in the treatment summaries must be used in conjunction with other prescribing details about the drugs and knowledge of the patient's medical and drug history.

## Medicinal Preparations

Preparations on this list which are not included in the BP or BPC are described under Details of NPF preparations.

### Almond oil ear drops p. 1244, BP

*Removal of ear wax*

### Arachis oil enema p. 64, NPF

*To soften impacted faeces*

### Aspirin tablet, dispersible, 300 mgs p. 132, BP (max. 96 tablets; max. pack size 32 tablets)

*Mild to moderate pain| Pyrexia (for both indications, see doses for community practitioner nurse prescribers)*

### Bisacodyl suppositories p. 65, BP (includes 5-mg and 10-mg strengths)

*Constipation (see dose for community practitioner nurse prescribers)*

### Bisacodyl tablets p. 65, BP

*Constipation (see dose for community practitioner nurse prescribers)*

### Catheter maintenance solutions, sodium chloride p. 836, NPF

*For removal of clots and other debris, to be instilled as required*

### Catheter maintenance solutions, 'Solution G' p. 836, NPF

*For prevention of catheter encrustation and crystallisation; in very severe cases use 'Solution R'*

### Catheter maintenance solutions, 'Solution R' p. 836, NPF

*For prevention of catheter encrustation and dissolution of crystallisation if 'Solution G' unsuccessful*

### Chlorhexidine gluconate alcoholic solutions containing at least 0.05%, see chlorhexidine p. 1321 and chlorhexidine gluconate with isopropyl alcohol p. 1321

*Skin disinfection*

### Chlorhexidine gluconate aqueous solutions p. 1687 containing at least 0.05%

*Skin disinfection*

### Choline salicylate dental gel p. 1260, BP

*Mild oral and perioral lesions*

### Clotrimazole cream 1% p. 1276, BP

*Fungal skin infections*

### Co-danthramer capsules, NPF [discontinued]

### Co-danthramer capsules, strong, NPF [discontinued]

### Co-danthramer oral suspension p. 66, NPF

*In consultation with doctor, constipation in palliative care*

### Co-danthramer oral suspension, strong p. 66, NPF

*In consultation with doctor, constipation in palliative care*

### Co-danthrusate capsules, BP [discontinued]

### Co-danthrusate oral suspension p. 66, NPF

*In consultation with doctor, constipation in palliative care*

### Crotamiton cream p. 1309, BP

*Pruritus (including pruritus after scabies)*

### Crotamiton lotion, BP [discontinued]

**Dimeticone barrier creams** containing at least 10%, see barrier creams and ointments p. 1266

*For use as a barrier preparation*

**Dimeticone lotion p. 1281, NPF**

*Head lice*

**Docusate sodium capsules p. 64, BP**

*Chronic constipation*

**Docusate sodium enema p. 64, NPF**

*Chronic constipation*

**Docusate sodium oral solution p. 64, BP**

*Chronic constipation*

*Dry skin conditions, including eczema*

**Dermalo<sup>®</sup> bath emollient**

*Dermatitis| Dry skin conditions, including ichthyosis| Pruritus of the elderly*

**Doublebase<sup>®</sup> emollient bath additive**

*Dry skin conditions, including dermatitis and ichthyosis| Pruritus of the elderly*

**Doublebase<sup>®</sup> emollient shower gel**

*Dry, chapped, or itchy skin conditions*

**Doublebase<sup>®</sup> emollient wash gel**

*Dry, chapped, or itchy skin conditions*

**Hydromol<sup>®</sup> bath and shower emollient**

*Dry skin conditions| Eczema| Ichthyosis| Pruritus of the elderly*

**Oilatum<sup>®</sup> emollient**

*Dry skin conditions including dermatitis and ichthyosis|*

*Pruritus of the elderly*

**Oilatum<sup>®</sup> gel** [discontinued]

**Oilatum<sup>®</sup> Junior bath additive**

*Dry skin conditions including dermatitis and ichthyosis|*

*Pruritus of the elderly*

**Zerolatum<sup>®</sup> emollient medicinal bath oil**

*Dry skin conditions| Dermatitis| Ichthyosis*

**Emollient bath and shower products, soya-bean oil-containing p. 1269** as listed below:

**Balneum<sup>®</sup>** (except pack sizes that are not to be prescribed under the NHS (see Part XVIII of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))

*Dry skin conditions including those associated with dermatitis and eczema*

**Balneum Plus<sup>®</sup> bath oil** (except pack sizes that are not to be prescribed under the NHS (see Part XVIII of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))

*Dry skin conditions including those associated with dermatitis and eczema where pruritus also experienced*

**Folic acid tablets 400 micrograms p. 1071, BP**

*Prevention of neural tube defects (in those at a low risk of conceiving a child with a neural tube defect)*

**Glycerol suppositories p. 67, BP**

*Constipation*

**Ibuprofen oral suspension p. 1186, BP** (except for indications and doses that are prescription-only)

*Pain and inflammation in rheumatic disease and other musculoskeletal disorders| Mild to moderate pain including dysmenorrhoea| Migraine| Dental pain| Headache| Fever| Symptoms of colds and influenza| Neuralgia| Mild to moderate pain| Pain and inflammation of soft-tissue injuries| Pyrexia with discomfort| Post-immunisation pyrexia in infants (for all indications, see doses for community practitioner nurse prescribers)*

**Ibuprofen tablets p. 1186, BP** (except for indications and doses that are prescription-only)

*Pain and inflammation in rheumatic disease and other musculoskeletal disorders| Mild to moderate pain including dysmenorrhoea| Migraine| Dental pain| Headache| Fever| Symptoms of colds and influenza| Neuralgia| Mild to moderate pain| Pain and inflammation of soft-tissue injuries| Pyrexia with discomfort (for all indications, see doses for community practitioner nurse prescribers)*

**Ispaghula husk granules p. 58, BP**

*Constipation (see dose for community practitioner nurse prescribers)*

**Ispaghula husk granules, effervescent p. 58, BP**

*Constipation (see dose for community practitioner nurse prescribers)*

**Ispaghula husk oral powder, BP** [discontinued]

**Lactulose solution p. 60, BP**

*Constipation (see dose for community practitioner nurse prescribers)*

**Lidocaine hydrochloride ointment p. 1406, BP**

*Sore nipples from breast-feeding*

**Lidocaine and chlorhexidine gel, BP**, see chlorhexidine with lidocaine p. 835

*Surface anaesthesia (see dose for community practitioner nurse prescribers)*

**Macrogol oral liquid, compound, NPF**, see macrogol 3350 with potassium chloride, sodium bicarbonate and sodium chloride p. 61

*Chronic constipation*

**Macrogol oral powder, compound, NPF**, see macrogol 3350 with potassium chloride, sodium bicarbonate and sodium chloride p. 61

*Chronic constipation* | *Faecal impaction (important: initial assessment by doctor; usual max. duration of treatment 3 days)*

**Macrogol oral powder, compound, half-strength, NPF**, see macrogol 3350 with potassium chloride, sodium bicarbonate and sodium chloride p. 61

*Chronic constipation* | *Faecal impaction (important: initial assessment by doctor; usual max. duration of treatment 3 days)*

**Magnesium hydroxide mixture p. 62, BP**

*Constipation*

**Magnesium sulfate paste, BP**

*Adjunct in management of boils, apply under dressing; stir before use*

**Malathion aqueous lotions p. 1281** containing at least 0.5%

*Head lice* | *Scabies*

**Mebendazole oral suspension p. 644, NPF**

*Threadworm infections (see dose for community practitioner nurse prescribers)*

**Mebendazole tablets p. 644, NPF**

*Threadworm infections (see dose for community practitioner nurse prescribers)*

**Methylcellulose tablets p. 59, BP**

*Constipation*

**Miconazole cream 2% p. 1277, BP**

*Fungal skin infections*

**Miconazole oromucosal gel p. 1262, BP**

*Prevention and treatment of oral candidiasis (see dose for community practitioner nurse prescribers)*

**Mouthwash solution-tablets, NPF**

**Nicotine inhalation cartridge for oromucosal use p. 521, NPF**

*Nicotine replacement therapy*

**Nicotine lozenge p. 521, NPF**

*Nicotine replacement therapy*

**Nicotine medicated chewing gum p. 521, NPF**

*Nicotine replacement therapy in individuals who smoke fewer than 20 cigarettes each day* | *Nicotine replacement therapy in individuals who smoke more than 20 cigarettes each day or who require more than 15 pieces of 2-mg strength gum each day*

**Nicotine nasal spray p. 521, NPF**

*Nicotine replacement therapy*

**Nicotine oral spray p. 521, NPF**

*Nicotine replacement therapy*

**Nicotine sublingual tablets p. 521, NPF**

*Nicotine replacement therapy in individuals who smoke fewer than 20 cigarettes each day* | *Nicotine replacement therapy in individuals who smoke more than 20 cigarettes each day*

**Nicotine transdermal patches p. 521, NPF**

*Nicotine replacement therapy*

**Nystatin oral suspension p. 1263, BP**

*Oral and perioral fungal infections (see dose for community practitioner nurse prescribers)*

**Olive oil ear drops p. 1244, BP**

*Removal of earwax (see dose for community practitioner nurse prescribers)*

**Paracetamol oral suspension p. 464, BP** (includes 120 mg/5 mL and 250 mg/5 mL strengths—both of which are available as sugar-free formulations)

*Mild to moderate pain (in adults)* | *Pyrexia (in adults)* | *Pain (in children)* | *Pyrexia with discomfort (in children)* | *Post-immunisation pyrexia in infants (refer to doctor if pyrexia persists)*

**Paracetamol tablets p. 464, BP** (max. 96 tablets; max. pack size 32 tablets)

*Mild to moderate pain (in adults)* | *Pyrexia (in adults)* | *Pain (in children)* | *Pyrexia with discomfort (in children)*

**Paracetamol tablets, soluble p. 464, BP** (max. 96 tablets; max. pack size 32 tablets)

*Mild to moderate pain (in adults)* | *Pyrexia (in adults)* | *Pain (in children)* | *Pyrexia with discomfort (in children)*

**Permethrin cream p. 1281, NPF**

*Scabies*

**Phosphates enema, BP**, see sodium acid phosphate with sodium phosphate p. 63

*Constipation, using Phosphates enema BP Formula B*

*Constipation, using Phosphates enema (Cleen Ready-to-Use) (for both indications, see doses for community practitioner nurse prescribers)*

**Povidone-iodine solution p. 1320, BP**

*Skin disinfection*

**Senna oral solution p. 67, NPF**

*Constipation (see dose for community practitioner nurse prescribers)*

**Senna tablets p. 67, BP**

*Constipation (see dose for community practitioner nurse prescribers)*

*Constipation*

**Sodium chloride solution, sterile, BP**, see Irrigation solutions p. 1322

*Skin cleansing*

**Sodium citrate compound enema p. 833, NPF**

*Constipation (see dose for community practitioner nurse prescribers)*

**Sodium picosulfate capsules, NPF** [discontinued]

**Sodium picosulfate elixir p. 68, NPF**

*Constipation (see dose for community practitioner nurse prescribers)*

**Spermicidal contraceptive: Gygel<sup>®</sup> contraceptive jelly**, see nonoxinol p. 858

*Spermicidal contraceptive in conjunction with barrier methods of contraception such as diaphragms or caps*

**Sterculia granules p. 59, NPF**

*Constipation*

**Sterculia with frangula granules p. 60, NPF**

*Constipation*

**Titanium ointment, BP**, see barrier creams and ointments p. 1266

*For use as a barrier preparation*

**Water for injections, BP**; available as 2-mL ampoules, 5-mL ampoules, 10-mL ampoules, 10-mL vials, 20-mL ampoules, and 100-mL vials

**Zinc and castor oil ointment, BP**, see barrier creams and ointments p. 1266

*For use as a barrier preparation*

**Zinc oxide and dimeticone spray, NPF**, see barrier creams and ointments p. 1266

*For use as a barrier preparation*

**Zinc oxide impregnated medicated bandage, NPF**, see Medicated bandages p. 1681

**Zinc oxide impregnated medicated stocking, NPF**, see Medicated bandages p. 1681

**Zinc paste bandage, BP 1993**, see Medicated bandages p. 1681

**Zinc paste and ichthammol bandage, BP 1993**, see Medicated bandages p. 1681

## Appliances and Reagents (including Wound Management Products)

Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may **not** be prescribed by Nurses are annotated Nx.

**Appliances** (including Contraceptive Devices) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff). (Where it is not appropriate for nurse

prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic.)

**Incontinence Appliances** as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

**Stoma Appliances and Associated Products** as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

**Chemical Reagents** as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:

National Health Service Drug Tariff for England and Wales: [www.nhsbsa.nhs.uk/pharmacies-gp-practices-and-appliance-contractors/drug-tariff](http://www.nhsbsa.nhs.uk/pharmacies-gp-practices-and-appliance-contractors/drug-tariff)

Health and Personal Social Services for Northern Ireland Drug Tariff: [www.hscbusiness.hscni.net/services/2034.htm](http://www.hscbusiness.hscni.net/services/2034.htm)

Scottish Drug Tariff: [www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/](http://www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/)

## Details of NPF preparations

Preparations on the Nurse Prescribers' Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers' Formulary. Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

### Arachis oil emema

arachis oil 100%

### Catheter maintenance solution, sodium chloride

(proprietary products: *OptiFlo S*; *Uro-Tainer Sodium Chloride*; *Uriflex-S*), sodium chloride 0.9%

### Catheter maintenance solution, 'Solution G'

(proprietary products: *OptiFlo G*; *Uro-Tainer Suby G*; *Uriflex G*), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 0.7%, disodium edetate 0.01%

### Catheter maintenance solution, 'Solution R'

(proprietary products: *OptiFlo R*; *Uro-Tainer Solutio R*; *Uriflex R*), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%

### Chlorhexidine gluconate alcoholic solutions

(proprietary products: *ChloroPrep*; *Hydrex Solution*; *Hydrex spray*), chlorhexidine gluconate in alcoholic solution

### Chlorhexidine gluconate aqueous solutions

(proprietary product: *Unisept*), chlorhexidine gluconate in aqueous solution

### Co-danthramer capsules [PoM]

co-danthramer 25/200 (dantron 25 mg, poloxamer '188' 200 mg)

### Co-danthramer capsules, strong [PoM]

co-danthramer 37.5/500 (dantron 37.5 mg, poloxamer '188' 500 mg)

### Co-danthramer oral suspension [PoM]

co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer '188' 200 mg/5 mL)

### Co-danthramer oral suspension, strong [PoM]

co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer '188' 1 g/5 mL)

### Co-danthrusate oral suspension [PoM]

(proprietary product: *Normax*), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)

### Dimeticone barrier creams

(proprietary products *Conotrane Cream*, dimeticone '350' 22%; *Stiopol Barrier Cream*, dimeticone '1000' 10%), dimeticone 10–22%

### Dimeticone lotion

(proprietary product: *Hedrin*), dimeticone 4%

## Docusate enema

(proprietary product: *Norgalax Micro-enema*), docusate sodium 120 mg in 10 g

## Liquid and white soft paraffin ointment

liquid paraffin 50%, white soft paraffin 50%

## Macrogol oral liquid, compound

(proprietary product: *Movicol Liquid*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL

## Macrogol oral powder, compound

(proprietary products: *Laxido Orange*, *Molaxole*, *Movicol*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet; (amount of potassium chloride varies according to flavour of *Movicol*® as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K<sup>+</sup> 5.4 mmol/litre)

## Macrogol oral powder, compound, half-strength

(proprietary product: *Movicol-Half*), macrogol '3350' (polyethylene glycol '3350') 6.563 g, sodium bicarbonate 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet

## Malathion aqueous lotions

(proprietary products: *Derbac-M Liquid*), malathion 0.5% in an aqueous basis

## Mebendazole oral suspension [PoM]

(proprietary product: *Vermox*), mebendazole 100 mg/5 mL

## Mebendazole tablets [PoM]

(proprietary products: *Ovex*, *Vermox*), mebendazole 100 mg (can be supplied for oral use in the treatment of enterobiasis in adults and children over 2 years provided its container or package is labelled to show a max. single dose of 100 mg and it is supplied in a container or package containing not more than 800 mg)

## Mouthwash solution-tablets

consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash

## Nicotine inhalation cartridge for oromucosal use

(proprietary products: *NicAssist Inhalator*, *Nicorette Inhalator*), nicotine 15 mg (for use with inhalation mouthpiece; to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device))

## Nicotine lozenge

nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: *Nicorette Mint Lozenge*, *Nicotinell Mint Lozenge*), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: *NiQuitin Lozenges*, *NiQuitin Minis*, *NiQuitin Pre-quit*)

## Nicotine medicated chewing gum

(proprietary products: *NicAssist Gum*, *Nicorette Gum*, *Nicotinell Gum*, *NiQuitin Gum*), nicotine 2 mg or 4 mg

## Nicotine nasal spray

(proprietary product: *NicAssist Nasal Spray*, *Nicorette Nasal Spray*), nicotine 500 micrograms/metered spray

## Nicotine oral spray

(proprietary product: *Nicorette Quickmist*), nicotine 1 mg/metered spray

## Nicotine sublingual tablets

(proprietary product: *NicAssist Microtab*, *Nicorette Microtab*), nicotine (as a cyclodextrin complex) 2 mg (to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))

## Nicotine transdermal patches

releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: *Boots NicAssist Patch*, *Nicorette Patch*), or releasing in each 16 hours approx. 10 mg, 15 mg, or 25 mg (proprietary products: *NicAssist Translucent Patch*, *Nicorette Invisi Patch*), or releasing in each 24 hours nicotine

approx. 7 mg, 14 mg, or 21 mg (proprietary products:

*Nicopatch, Nicotinell TTS, NiQuitin, NiQuitin Clear*)

(prescriber should specify the brand to be dispensed)

**Permethrin cream**

(proprietary product: *Lyclear Dermal Cream*), permethrin 5%

**Senna oral solution**

(proprietary product: *Senokot Syrup*), sennosides 7.5 mg/5 mL

**Senna and ispaghula granules**

(proprietary product: *Manevac Granules*), senna fruit 12.4%, ispaghula 54.2%

**Sodium citrate compound enema**

(proprietary products: *Micolette Micro-enema; Micralax Micro-enema; Relaxit Micro-enema*), sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant

**Sodium picosulfate capsules**

(proprietary products: *Dulcolax Perles*), sodium picosulfate 2.5 mg

**Sodium picosulfate elixir**

(proprietary product: *Dulcolax Liquid*), sodium picosulfate 5 mg/5 mL

**Sterculia granules**

(proprietary product: *Normacol Granules*), sterculia 62%

**Sterculia and frangula granules**

(proprietary product: *Normacol Plus Granules*), sterculia 62%, frangula (standardised) 8%

**Zinc oxide and dimeticone spray**

(proprietary product: *Sprilon*), dimeticone 1.04%, zinc oxide 12.5% in a pressurised aerosol unit

**Zinc oxide impregnated medicated bandage**

(proprietary product: *Steripaste*), sterile cotton bandage impregnated with paste containing zinc oxide 15%

**Zinc oxide impregnated medicated stocking**

(proprietary product: *Zipzoc*), sterile rayon stocking impregnated with ointment containing zinc oxide 20%

# Non-medical prescribing

## Overview

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers.

Independent prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name.

Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient's agreement.

Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register.

Information and guidance on non-medical prescribing is available on the Department of Health website at [www.dh.gov.uk/health/2012/04/prescribing-change](http://www.dh.gov.uk/health/2012/04/prescribing-change).

For information on the mixing of medicines by Independent and Supplementary Prescribers, see *Mixing of medicines prior to administration in clinical practice: medical and non-medical prescribing*, National Prescribing Centre, May 2010 (available at [www.gov.uk/government/uploads/system/uploads/attachment\\_data/file/213885/dh\\_116360.pdf](http://www.gov.uk/government/uploads/system/uploads/attachment_data/file/213885/dh_116360.pdf)).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

In order to protect patient safety, the initial prescribing and supply of medicines prescribed should normally remain separate functions performed by separate healthcare professionals.

## Nurses

Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition. Unlicensed medicines are excluded from the Nurse Prescribing Formulary in Scotland.

Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 476, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Nurse Independent Prescribers must work within their own level of professional competence and expertise.

The Approved list for prescribing by Community Practitioner Nurse Prescribers (NPF) p. 1685 for Community Practitioners provides information on prescribing.

## Pharmacists

Pharmacist Independent Prescribers can prescribe any medicine for any medical condition. This includes unlicensed medicines, subject to accepted clinical good practice.

They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 476, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

## Physiotherapists

Physiotherapist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs: oral or injectable morphine p. 483, transdermal fentanyl p. 478 and oral diazepam p. 362, dihydrocodeine tartrate p. 477, lorazepam p. 357, oxycodone hydrochloride p. 486 or temazepam p. 509.

Physiotherapist Independent Prescribers must work within their own level of professional competence and expertise.

## Therapeutic radiographers

Therapeutic Radiographer Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Prescribing of Controlled Drugs is subject to legislative changes. Therapeutic Radiographer Independent Prescribers must work within their own level of professional competence and expertise.

## Optometrists

Optometrist Independent Prescribers can prescribe any licensed medicine for ocular conditions affecting the eye and the tissues surrounding the eye, except Controlled Drugs or medicines for parenteral administration. Optometrist Independent Prescribers must work within their own level of professional competence and expertise.

## Podiatrists

Podiatrist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs for oral administration: diazepam p. 362, dihydrocodeine tartrate p. 477, lorazepam p. 357 and temazepam p. 509.

Podiatrist Independent Prescribers must work within their own level of professional competence and expertise.

## Paramedics

Paramedic Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Prescribing of Controlled Drugs is subject to legislative changes. Paramedic Independent Prescribers must work within their own level of professional competence and expertise.

## Further Information

For further details about the different types of prescribers, see *Medicines, Ethics and Practice*, London, Pharmaceutical Press (always consult latest edition).

# Index of manufacturers

The following is an alphabetical list of manufacturers and other companies referenced in the BNF, with their medicines information or general contact details. For information on 'special-order' manufacturers and specialist importing companies see 'Special-order manufacturers'.

# Special-order manufacturers

Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at [tinyurl.com/cdslike](http://tinyurl.com/cdslike).

Licensed **hospital manufacturing units** also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (*Pro-File*; [www.pro-file.nhs.uk](http://www.pro-file.nhs.uk)) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies ([www.apsm-uk.com](http://www.apsm-uk.com)).

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed medicine.

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust.

## England

### London

#### Barts and the London NHS Trust

Mr J. A. Rickard, Head of Barts Health Pharmaceuticals  
Barts Health NHS Trust  
The Royal London Hospital  
Pathology and Pharmacy Building  
80 Newark St  
Whitechapel  
London

**YellowCard**

COMMISSION ON HUMAN MEDICINES (CHM)

It's easy to report online at:  
[www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard)**REPORT OF SUSPECTED ADVERSE DRUG REACTIONS**

If you suspect an adverse reaction may be related to one or more drugs/vaccines/complementary remedies, please complete this Yellow Card. See 'Adverse reactions to drugs' section in BNF or [www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard) for guidance. Do not be put off reporting because some details are not known.

**PATIENT DETAILS** Patient Initials: \_\_\_\_\_ Sex: M / F Is the patient pregnant? Y / N Ethnicity: \_\_\_\_\_  
Age (at time of reaction): \_\_\_\_\_ Weight (kg): \_\_\_\_\_ Identification number (e.g. Practice or Hospital Ref): \_\_\_\_\_

**SUSPECTED DRUG(S)/VACCINE(S)**

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____

**SUSPECTED REACTION(S)** Please describe the reaction(s) and any treatment given. (Please attach additional pages if necessary):**Outcome**

Recovered ☐  
Recovering ☐  
Continuing ☐  
Other ☐

Date reaction(s) started: \_\_\_\_\_ Date reaction(s) stopped: \_\_\_\_\_

Do you consider the reactions to be serious? Yes / No

If yes, please indicate why the reaction is considered to be serious (please tick all that apply):

<input type="checkbox"/> Patient died due to reaction	<input type="checkbox"/> Involved or prolonged inpatient hospitalisation
<input type="checkbox"/> Life threatening	<input type="checkbox"/> Involved persistent or significant disability or incapacity
<input type="checkbox"/> Congenital abnormality	Medically significant; please give details: _____

If the reactions were not serious according to the categories above, how bad was the suspected reaction?

☐ Mild ☐ Unpleasant, but did not affect everyday activities ☐ Bad enough to affect everyday activities

It's easy to report online: [www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard)

**OTHER DRUG(S) (including self-medication and complementary remedies)**

Did the patient take any other medicines/vaccines/complementary remedies in the last 3 months prior to the reaction? Yes / No

If yes, please give the following information if known:

Drug/Vaccine (Brand if known)	Batch	Route	Dosage	Date started	Date stopped	Prescribed for
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____
_____	_____	_____	_____	_____	_____	_____

**Additional relevant information** e.g. medical history, test results, known allergies, rechallenge (if performed). For reactions relating to use of a medicine during pregnancy please state all other drugs taken during pregnancy, the last menstrual period, information on previous pregnancies, ultrasound scans, any delivery complications, birth defects or developmental concerns.

Please list any medicines obtained from the internet:

# Adult Advanced Life Support Algorithm

Resuscitation Council (UK)

Adult Advanced Life Support

## During CPR

- Ensure high quality chest compressions
- Minimise interruptions to compressions
- Give oxygen
- Use waveform capnography
- Continuous compressions when advanced airway in place
- Vascular access (intravenous or intraosseous)
- Give adrenaline every 3-5 min
- Give amiodarone after 3 shocks

## Treat Reversible Causes

- Hypoxia
- Hypovolaemia
- Hypo-/hyperkalaemia/metabolic
- Hypothermia
- Thrombosis - coronary or pulmonary
- Tension pneumothorax
- Tamponade - cardiac
- Toxins

## Consider

- Ultrasound imaging
- Mechanical chest compressions to facilitate transfer/treatment
- Coronary angiography and percutaneous coronary intervention
- Extracorporeal CPR

Reproduced with the kind permission of the Resuscitation Council (UK) from Resuscitation Guidelines, 2015

# Medical emergencies in the community

## Overview

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals. Only drugs that are used for immediate relief are shown; advice on supporting care is not given. Where the patient's condition requires investigation and further treatment, the patient should be transferred to hospital promptly.

## Acute coronary syndromes

### ▶ **ANGINA: UNSTABLE**

**Aspirin dispersible tablets p. 132** (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

### ▶ **PLUS**

▶ **EITHER** **Glyceryl trinitrate aerosol spray p. 233**

(400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

▶ **OR** **Glyceryl trinitrate tablets** (300 micrograms,

500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

▶ **MYOCARDIAL INFARCTION: NON-ST-SEGMENT ELEVATION**

Treat as for Angina: unstable

▶ **MYOCARDIAL INFARCTION: ST-SEGMENT ELEVATION**

**Aspirin dispersible tablets** (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

**Glyceryl trinitrate aerosol spray** (400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

▶ **OR** **Glyceryl trinitrate tablets** (300 micrograms,

500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

**Metoclopramide hydrochloride injection p. 451** (5 mg/mL)

BY INTRAVENOUS INJECTION

▶ Adult 18–19 years (body-weight up to 60 kg): 5 mg

▶ Adult 18–19 years (body-weight 60 kg and over): 10 mg

▶ Adult over 19 years: 10 mg

**Diamorphine hydrochloride injection p. 476** (5 mg powder for reconstitution)

BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)

▶ Adult: 5 mg followed by a further 2.5–5 mg if necessary

▶ Elderly or frail patients, reduce dose by half

▶ **OR** **Morphine sulfate injection p. 483** (10 mg/mL)

BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)

▶ Adult: 5–10 mg followed by a further 5–10 mg if necessary

▶ Elderly or frail patients: reduce dose by half

**Oxygen**, if appropriate

## Airways disease, obstructive

### ▶ **ASTHMA: ACUTE**

Regard each emergency consultation as being for **severe acute asthma** until shown otherwise; failure to respond adequately **at any time** requires immediate transfer to hospital

▶ **EITHER** **Salbutamol aerosol inhaler p. 269**

(100 micrograms/metered inhalation)

BY AEROSOL INHALATION VIA LARGE-VOLUME SPACER

(AND A CLOSE-FITTING FACE MASK IF CHILD UNDER 3 YEARS)

▶ Adult and child: 2–10 puffs each inhaled separately, repeated every 10–20 minutes or as necessary

▶ **OR** **Salbutamol nebuliser solution** (1 mg/mL, 2 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 2.5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 2.5–5 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 5 mg every 20–30 minutes or as necessary

▶ Adult: 5 mg every 20–30 minutes or as necessary

▶ **OR** **Terbutaline sulfate nebuliser solution p. 271** (2.5 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 5–10 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 10 mg every 20–30 minutes or as necessary

▶ Adult: 10 mg every 20–30 minutes or as necessary

▶ **PLUS (in all cases)**

▶ **EITHER** **Prednisolone tablets p. 718 (or prednisolone soluble tablets)** (5 mg)

BY MOUTH

▶ Child 11 years and below: 1–2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily

▶ Child 12–17 years: 40–50 mg once daily for at least 5 days

▶ Adult: 40–50 mg once daily for at least 5 days

▶ **OR** **Hydrocortisone p. 716 (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

▶ Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:

▶ Child 1 year and below: 25 mg

▶ Child 2–4 years: 50 mg

▶ Child 5–17 years: 100 mg

▶ Adult: 100 mg every 6 hours until conversion to oral prednisolone is possible

High-flow **oxygen** should be given if available (via face mask in children)

Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission. While awaiting ambulance, repeat **nebulised beta<sub>2</sub> agonist** (as above) and give with

### **Ipratropium bromide nebuliser solution p. 262**

(250 micrograms/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- ▶ Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every 4–6 hours as necessary
- ▶ Child 12–17 years: 500 micrograms every 4–6 hours as necessary
- ▶ Adult: 500 micrograms every 4–6 hours as necessary

### ▶ **CROUP**

#### **Dexamethasone oral solution p. 714** (2 mg/5 mL)

BY MOUTH

- ▶ Child 1 month–2 years: 150 micrograms/kg as a single dose

## **Anaphylaxis**

### ▶ **ANAPHYLAXIS**

#### **Adrenaline/epinephrine injection p. 238** (1 mg/mL (1 in 1000))

BY INTRAMUSCULAR INJECTION

- ▶ Child 5 years and below: 150 micrograms (0.15 mL), repeated every 5 minutes if necessary
- ▶ Child 6–11 years: 300 micrograms (0.3 mL), repeated every 5 minutes if necessary
- ▶ Child 12–17 years: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal
- ▶ Adult: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary

High-flow **oxygen** and **intravenous fluids** should be given as soon as available.

#### **Chlorphenamine maleate injection p. 299**

BY INTRAMUSCULAR OR INTRAVENOUS INJECTION

May help counter histamine-mediated vasodilation and bronchoconstriction.

#### **Hydrocortisone (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

Has delayed action but should be given to severely affected patients to prevent further deterioration.

## **Bacterial infection**

### ▶ **MENINGOCOCCAL DISEASE**

#### **Benzylpenicillin sodium injection p. 580** (600 mg, 1.2 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 300 mg
- ▶ Child 1 month–11 months: 300 mg
- ▶ Child 1–9 years: 600 mg
- ▶ Child 10–17 years: 1.2 g
- ▶ Adult: 1.2 g

**NOTE** A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

### ▶ **OR if history of allergy to penicillin**

#### **Cefotaxime injection p. 557** (1 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 50 mg/kg
- ▶ Child 1 month–11 years: 50 mg/kg (max. 1 g)
- ▶ Child 12–17 years: 1 g
- ▶ Adult: 1 g

**NOTE** A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

- ▶ **OR if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins**

#### **Chloramphenicol injection p. 605** (1 g)

BY INTRAVENOUS INJECTION

- ▶ Child: 12.5–25 mg/kg
- ▶ Adult: 12.5–25 mg/kg

**NOTE** A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, antibacterial therapy p. 533.

## **Hypoglycaemia**

### ▶ **DIABETIC HYPOGLYCAEMIA**

#### **Glucose or sucrose**

BY MOUTH

- ▶ Adult and child over 2 years: approx. 10–20 g (110–220 mL *Lucozade*® *Energy Original* or 100–200 mL *Coca-Cola*®—both non-diet versions or 2–4 teaspoonfuls of sugar or 3–6 sugar lumps) repeated after 10–15 minutes if necessary

### ▶ **OR if hypoglycaemia unresponsive or if oral route cannot be used**

#### **Glucagon injection p. 764** (1 mg/mL)

BY SUBCUTANEOUS OR INTRAMUSCULAR INJECTION

- ▶ Child body-weight up to 25 kg: 500 micrograms (0.5 mL)
- ▶ Child body-weight 25 kg and over: 1 mg (1 mL)
- ▶ Adult: 1 mg (1 mL)

### ▶ **OR if hypoglycaemia prolonged or unresponsive to glucagon after 10 minutes**

#### **Glucose intravenous infusion p. 1090** (10%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Child: 5 mL/kg (glucose 500 mg/kg)

#### **Glucose intravenous infusion** (20%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Adult: 50 mL

## **Seizures**

### ▶ **CONVULSIVE (INCLUDING FEBRILE) SEIZURES LASTING LONGER THAN 5 MINUTES**

#### ▶ **EITHER Diazepam rectal solution p. 362** (2 mg/mL, 4 mg/mL)

BY RECTUM

- ▶ Neonate: 1.25–2.5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 1 month–1 year: 5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 2–11 years: 5–10 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 12–17 years: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Adult: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Elderly: 10 mg, repeated once after 10–15 minutes if necessary

#### ▶ **OR Midazolam oromucosal solution p. 358**

BY BUCCAL ADMINISTRATION, REPEATED ONCE AFTER 10 MINUTES IF NECESSARY

- ▶ Neonate: 300 micrograms/kg [unlicensed]
- ▶ Child 1–2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
- ▶ Child 3 months–11 months: 2.5 mg
- ▶ Child 1–4 years: 5 mg
- ▶ Child 5–9 years: 7.5 mg
- ▶ Child 10–17 years: 10 mg
- ▶ Adult: 10 mg [unlicensed]

# Approximate Conversions and Units

## Conversion of pounds to kilograms

lb	kg
1	0.45
2	0.91
3	1.36
4	1.81
5	2.27
6	2.72
7	3.18
8	3.63
9	4.08
10	4.54
11	4.99
12	5.44
13	5.90
14	6.35

## Conversion of stones to kilograms

stones	kg
1	6.35
2	12.70
3	19.05
4	25.40
5	31.75
6	38.10
7	44.45
8	50.80
9	57.15
10	63.50
11	69.85
12	76.20
13	82.55
14	88.90
15	95.25

## Conversion from millilitres to fluid ounces

mL	fl oz
50	1.8
100	3.5
150	5.3
200	7.0
500	17.6
1000	35.2

## Length

1 metre (m) = 1000 millimetres (mm)  
1 centimetre (cm) = 10 mm  
1 inch (in) = 25.4 mm  
1 foot (ft) = 12 inches  
12 inches = 304.8 mm

## Mass

1 kilogram (kg) = 1000 grams (g)  
1 gram (g) = 1000 milligrams (mg)  
1 milligram (mg) = 1000 micrograms  
1 microgram = 1000 nanograms  
1 nanogram = 1000 picograms

## Volume

1 litre = 1000 millilitres (mL)  
1 millilitre (1 mL) = 1000 microlitres  
1 pint ≈ 568 mL

## Other units

1 kilocalorie (kcal) = 4186.8 joules (J)  
1000 kilocalories (kcal) = 4.1868 megajoules (MJ)  
1 megajoule (MJ) = 238.8 kilocalories (kcal)  
1 millimetre of mercury (mmHg) = 133.3 pascals (Pa)  
1 kilopascal (kPa) = 7.5 mmHg (pressure)

## Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

## Prescribing for children: weight, height, and gender

The table below shows the **mean values** for weight, height, and gender by age; these values have been derived from the UK-WHO growth charts 2009 and UK1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of measurements. However, an individual's weight and height might vary considerably from the values in the table and it is important to ensure that the value chosen is appropriate. In most cases the actual measurement should be obtained as soon as possible and the dose re-calculated.

Age	Weight (kg)	Height (cm)
Full-term neonate	3.5	51
1 month	4.3	55
2 months	5.4	58
3 months	6.1	61
4 months	6.7	63
6 months	7.6	67
1 year	9	75
3 years	14	96
5 years	18	109
7 years	23	122
10 years	32	138
12 years	39	149
14 year old boy	49	163
14 year old girl	50	159
Adult male	68	176
Adult female	58	164

# Recommended wording of cautionary and advisory labels

For details including Welsh Language translation see p. 1656

- 1** Warning: This medicine may make you sleepy
- 2** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol
- 3** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines
- 4** Warning: Do not drink alcohol
- 5** Do not take indigestion remedies 2 hours before or after you take this medicine
- 6** Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 7** Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 8** Warning: Do not stop taking this medicine unless your doctor tells you to stop
- 9** Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop
- 10** Warning: Read the additional information given with this medicine
- 11** Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds
- 12** Do not take anything containing aspirin while taking this medicine
- 13** Dissolve or mix with water before taking
- 14** This medicine may colour your urine. This is harmless
- 15** Caution: flammable. Keep your body away from fire or flames after you have put on the medicine
- 16** Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening
- 17** Do not take more than... in 24 hours
- 18** Do not take more than... in 24 hours. Also, do not take more than... in any one week
- 19** Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol
- 21** Take with or just after food, or a meal
- 22** Take 30 to 60 minutes before food
- 23** Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food
- 24** Suck or chew this medicine
- 25** Swallow this medicine whole. Do not chew or crush
- 26** Dissolve this medicine under your tongue
- 27** Take with a full glass of water
- 28** Spread thinly on the affected skin only
- 29** Do not take more than 2 at any one time. Do not take more than 8 in 24 hours
- 30** Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well
- 32** Contains aspirin. Do not take anything else containing aspirin while taking this medicine

Abbreviations and Symbols

Internationally recognised units and symbols are used in the BNF publications where possible.

ACBS	Advisory Committee on Borderline Substances, see Borderline Substances
ACE	Angiotensin-converting enzyme
ADHD	Attention deficit hyperactivity disorder
AIDS	Acquired immunodeficiency syndrome
approx.	approximately
AV	atrioventricular
AWMSG	All Wales Medicines Strategy Group
BSN	British Approved Name
BMI	body mass index
BP	British Pharmacopoeia 2013, unless otherwise stated
BPC	British Pharmaceutical Codex 1973 and Supplement 1976, unless otherwise stated
BRCA	breast cancer gene
CAPD	Continuous ambulatory peritoneal dialysis
CD1	preparation in Schedule 1 of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations see Controlled drugs and drug dependence p. 8.
CD2	preparation in Schedule 2 of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations see Controlled drugs and drug dependence p. 8.
CD3	preparation in Schedule 3 of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations see Controlled drugs and drug dependence p. 8.
CD4-1	preparation in Schedule 4 (Part I) of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations see Controlled drugs and drug dependence p. 8.
CD4-2	preparation in Schedule 4 (Part II) of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations see Controlled drugs and drug dependence p. 8.
CD5	preparation in Schedule 5 of the Misuse of Drugs Regulations 2001 (and subsequent amendments). For regulations see Controlled drugs and drug dependence p. 8.
CHM	Commission on Human Medicines
CHMP	Committee for Medicinal Products for Human Use
CNS	central nervous system
CSM	Committee on Safety of Medicines (now subsumed under Commission on Human Medicines)
d. c.	direct current
DMARD	Disease-modifying antirheumatic drug
DPF	Dental Practitioners' Formulary
DT	Drug Tariff price
e/c	enteric-coated (termed gastro-resistant in BP)
ECG	electrocardiogram
EEG	electro-encephalogram
eGFR	estimated glomerular filtration rate, see Prescribing in renal impairment p. 23
f/c	film-coated
FSRH	Faculty of Sexual and Reproductive Healthcare
G6PD	glucose 6-phosphate dehydrogenase
GSL	general sales list
HDL-cholesterol	high-density lipoprotein cholesterol
HIV	Human immunodeficiency virus
HRT	Hormone replacement therapy
i/m	intramuscular
i/v	intravenous
INR	international normalised ratio
JCVI	Joint Committee on Vaccination and Immunisation
LDL-cholesterol	low-density lipoprotein cholesterol
MAOI	Monoamine-oxidase inhibitor
max.	maximum
MHRA	Medicines and Healthcare products Regulatory Agency
m/r	modified-release
NCL	no cautionary labels (prescription endorsement made by prescriber when recommended cautionary labels are not required)
NHS	National Health Service
NICE	National Institute for Health and Care Excellence
NPF	Nurse Prescribers' Formulary
NSAID	Non-steroidal anti-inflammatory drug
NSTEMI	non-ST-segment elevation myocardial infarction
P	pharmacy only medicine
PARP	poly (ADP-ribose) polymerase
PGD	patient group direction
PHE	Public Health England (formerly Health Protection Agency (HPA))
PoM	prescription-only medicine, see Fig. 1 How to use BNF publications
®	trade mark
rINN	Recommended International Non-proprietary Name
RSV	respiratory syncytial virus
s/c	sugar-coated
SLS	Selected List Scheme

Latin abbreviations

Directions should be in English without abbreviation. However, Latin abbreviations have been used when prescribing.  
The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.

a. c.	= ante cibum (before food)
b. d.	= bis die (twice daily)
o. d.	= omni die (every day)
o. m.	= omni mane (every morning)
o. n.	= omni nocte (every night)
p. c.	= post cibum (after food)
p. r. n.	= pro re nata (when required)
q. d. s.	= quater die sumendum (to be taken four times daily)
q. q. h.	= quarta quaque hora (every four hours)
stat	= immediately
t. d. s.	= ter die sumendum (to be taken three times daily)
t. i. d.	= ter in die (three times daily)

E numbers

The following is a list of common E numbers and the inactive ingredients to which they correspond.

E102	Tartrazine
E104	Quinoline Yellow
E110	Sunset Yellow FCF
E123	Amaranth
E124	Ponceau 4R
E127	Erythrosine BS
E132	Indigo Carmine
E142	Green S
E171	Titanium Dioxide
E172	Iron oxides, iron hydroxides
E200	Sorbic Acid
E211	Sodium Benzoate
E223	Sodium Metabisulfite
E320	Butylated Hydroxyanisole
E321	Butylated Hydroxytoluene
E322	Lecithins
E420	Sorbitol
E421	Mannitol
E422	Glycerol
E901	Beeswax (white and yellow)
E1520	Propylene Glycol
